THE GRAND RAPIDS AMATEUR RADIO ASSOCIATION
Presents

SUPER SWAP '96
Saturday, Sept. 28, 1996
At Unity Cristian High School in Hudsonville, MI

Seller setup at 6AM, General entry at 8AM.

Buy and sell new and used Amateur and Computer
equipment and Software. Pick up that bargain
you have been waiting for. Sell or trade that
equipment that is just laying around the shack.

Tickets are $4 in advance 5$ at the door. Tables
are $8 each. Make sure to reserve yours, they are
selling fast.

Directions: Unity Christian High School is located at
3487 Oak St. in Hudsonville, MI. From M-21 (Chicago Dr.)
Head north at 32nd Ave, Turn left to Oak St. From
I-196, use Exit 62 at 32nd Ave, Go 1.4 Miles to Oak St.
and turn left to the school.

Talk In 147.260 & 444.4 CTCSS 94.8 The W8DC Repeater

For advance tickets or table reservation contact,
GRARA, C/O SuperSwap '96, PO Box 1248,
Grand Rapids, MI 49501 or
Call Dave Devos at 616-698-7022

4057. Re: Kenwood TS-870 vs TS-950SDX????????

Hi Tony,

I owned a TS-870 for about 5 months and just purchased a TS-950SDX. Though I never had the opportunity to try them out side-by-side there are some distinct differences. The 870 is a great rig for the price, considering that you don't need to buy filters it's a good deal. CW worked exceptionally well with the combination of DSP on receive and the keyer for Xmit. Being able to zero beat to a signal and then turn the DSP knob till you had the isolation you wanted without filter ringing was a real pleasure. I found on pactor and RTTY that the DSP filter steps could either be too wide or too narrow and wished for the ability to choose a frequency between 250 and 500 Hz. I noticed on the scope that when a FSK signal was tuned in at the 250Hz setting there was a degradation of the waveform. On SSB the rig performed well with good comments on transmit audio but there was not the selectivity with strong adjacent stations that I saw on CW.

The 950 is a great radio! I can't say for sure if you would find it worth the additional cash but if your operating practices demand it then it is. The one I have has all the optional filters and though the narrowest filter on CW does have that traditional ringing sound it does the job. The receive audio is *very* quite and the quality is great. SSB selectivity with the full filter choice and the slope tuning is exceptional. The duel receive is great for working split or just monitoring one station while searching for DX. It came in very useful monitoring the various emergency nets during the approach of hurricane Fran. The antenna tuner works very well and has a manual mode as well as an auto mode. In the digital modes the combination of filter choices and IF VBT really work great. The manual stinks!

All in all I wouldn't trade my 950 back for the 870 and am very happy with my choice.

73 and good luck with your decision

Richard

TEKK KS-1000 is 5W radio, but seems also not enough power for using in car.

73! Victor

4059. Re: FAULTY TS440S

I have a Kenwood (my first and last) TS440S too, and have some experiance
in this area.

This means that the pll is unlocked. The cause is most likely the alien
brown goo they use to secure the vco components to the pwb. This "goo"
evidently becomes slightly conductive with time & humidity. This I guess
causes the vco control voltage to get shunted to ground. You have to
remove all this goo, and I recall the service bulliten reccomends
replacing some or all of the varactor diodes. Not fun. The bulliten also
reccomends replacing the alien brown "GOO" with hot melt glue. I'm not
sure this is any better than what was there originally. If I do get
around to fixing mine (yet) again, the vco's will either get some
different "goo", or maybe none.

Another problem you will experiance (if you haven't already) is keypad
bounce. Attempting to enter in a frequency or memory channel via the
keyboard will only result in frustation. If your desire is to listen to
11.11111 or 22.2222 Mhz, this "feature" will be just what you're looling
for. <G>

Good luck with the radio.

Modifications, Undocumented Features, and Bugs for the Kenwood TM-733A.
Release 2.1 Updated March 1, 1995

Updates for Release 2.1 are identified by parenthetical statements.
There is also some new information sprinkled throughout the previous material
either to update it, to correct misinformation, or to be more specific.

I was wanting to put this out as release 3.0 but I havn't received info
that I was waiting for, and hoping to get. This is what I'm looking for
to include into release 3.0:

o I've heard there is a serious problem with 9600 baud packet.
Is this true, and is there a fix for this?
o Someone told me they were working on a computer program that
works with the 733 in clone mode to store different profiles.
Who told me this? And have you finished? *grin*

This document is a compilation of Internet messages from
Steve Haehnichen KE6JGK and Brad Killebrew N5LJV, edited by Brad Killebrew.

Extended RF Modifications

Refer to diagram below. (Inserted into Release 2.0)

Remove power source from the radio.

Remove the display panel.

Remove the top cover the radio.

Face the front of the radio away from you.

Remove the speaker.

Looking from the back of the radio, the control board is vertically
mounted just behind the front panel wall (which can be removed easily
if better access is needed.)

Just to the right of a chip labeled XRU4066BCF and just to the left of
two green wires (B2 & B3 which are draped over the board to the rear) are
two zero-ohm SMT resistors, B0 and B1, marked "000".

Remove B0. (the one on the left - furthest from the green wires)

Taking it out might be a bit tricky. It's glued down for surface-mount
assembly. Be careful not to pull the trace from the board.

Perform a CPU reset by holding [MR] while turning on the radio.
It will then ask if it is "OK?" to reset, press [MR] again.

The ranges after modification are as follows:

Tx: 136-174 410-470
Rx: 118-174 300-470

** NOTE **

I don't agree with the UHF Rx of 300-470, I say it recieves
from 410 - 527 MHz, The Display may go down to 300, but
from what I see 300 - 410 Mhz is actually 417.050 to
527.050 (I think there is a IF of 117.050) So if you do the MOD
try to see if you can pick up and transmissions in the 470 - 480
range, You would tune between 352.950 - 362.950 to pick up 470 - 480.

Let me know, Keith - N2NJS "Keith@unix.asb.com"

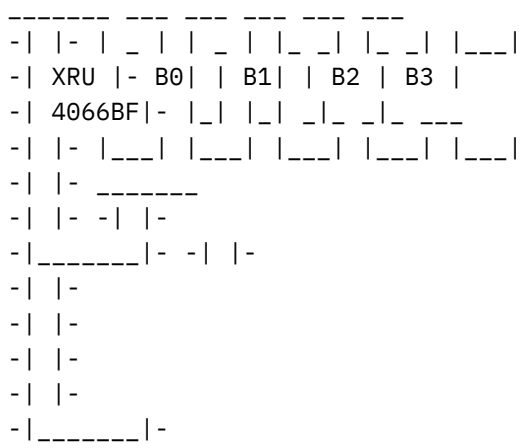
The cellular band is indeed missing.
If the mod is done correctly, it'll play a little song for you. (r2.1)

ONLY Removing Jumper 1 (B2) is the MARS/CAP modification.

** Diagram of specified area on Control Board **

EDGE OF BOARD, viewed from the rear, looking toward front panel

Green jumper wires (B2, B3)



The jumpers are actually soldered on the other side of the board,
but the loops come up over the top and hang over the B0/B1 side.

B0=R414
B1=R412

Here's something interesting! According the Kenwood rep I spoke to,
performing this mod *does not* void your factory warranty. The same
goes for any Kenwood published service bulletin or modification info.
We are encouraged to perform the repairs ourselves to save them the
trouble and expence.

DTMF Remote via Microphone

The TM-733 is fully DTMF remotable via the microphone (documented).
The radio can also be externally DTMF controllable with an HT, but that
will be described later.

The DTMF control keys are exactly as shown on page 81 of the
manual. Note that the microphone is active all the time, so any
ambient DTMF tones near your mic will also change rig settings. This
includes tones coming in on the other band and out the speaker.

Cross Band Repeating

Cross band repeat isn't documented but comes ready from the factory.
To enable cross band repeat from the front panel, first select a band
by pressing BAND SELECT. Then, change the control to the other band by
hitting [CONT SEL]. Next, press [F] for one second, then the "X" button
(far right side). Decimals will appear between the Kilohertz digits, and
the "ON" indicator will light momentarily. The microphone sequence to
enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by
turning on the radio with [LOW] pressed. They also recommend enabling
the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band repeater.
For example, if you can receive a distant repeater with your HT, but have
difficulty getting into it, you can use the TM-733 to boost your transmitted
signal. To set this up, just omit the part where you "change the control
to the other band by pressing [CONT SEL]." Doing this will setup the TM-733
to repeat your signal to the other band, but will not retransmit the distant
station back to you. If this sounds ambiguous, play around with it a little
and it will begin to make sense.

DTMF Paging and Squelch

The DTMF Paging & DTMF Squelch protocol (AAA*BBB) is compatible with
the Yaesu 530 and all Kenwood radios supporting this.

DTMF Monitor

There are some serious bugs in the "DTMF Monitor" feature (Page 63:
[PTT] + [DWN] + Power On). This feature supposedly lets you hear the
DTMF tones you are transmitting. The first problem is that it only
gives you a short tone from the internal speaker. This is not true to
the transmitted tone that lasts as long as you hold the key. The much

bigger problem is that it mixes the desired tone and the feedback tone resulting in an almost indecodable DTMF tone. Kenwood is aware of this bug.

(Updated information for Release 2.0):

Per Ricardo, a Kenwood technician, they are aware of this bug and are working on a fix. No details yet.

Front Panel

There are two undocumented icons on the display; one is the "heart" symbol. Anyone know what that's for? It could just be a spare. I noticed they used the odd "spade" symbol to indicate AM receive, so maybe these were last minute extras. Dunno..

From looking at the schematic, it seems that the only programmable memory is physically located in the detachable front-panel. I think this means that if I use my front-panel on someone else's radio, I get all my memories and settings. Anyone try this?

(r2.1) I've had several reports that this DOES work. I wish I had two 733's to test this out. *grin*

The whole front panel is connected to the rig by four wires (yep, including the volume/squelch pots.) According to the schematic, these are: power, ground, data in, and data out. I'm wondering how hard it would be to make a PC interface for this thing and replace the whole display and controls with a full-screen version. It wouldn't surprise me if many of the programming limits were also imposed by the front panel, and not the unit.

Wireless Cloning

(r2.1) This section has updates provided by Ryan Welty KR4OQ.

The advertised but undocumented Wireless Clone function is described in App Note AAN-0008 which they will mail out on request. (Maybe if enough people ask for it, they will include all the functions in future instruction manuals.) In summary:

- Prepare the two radios for simplex operation on the same frequency.
- Have both bands in VFO mode.
- Have Remote Control disabled on both radios.
- Turn both radios off.
- Press [CALL]+[SHIFT] + [Pwr On].
- This should place the radios is clone mode with "CLonE" on the display.
- Press PTT on the "Master" radio momentarily. This will start sending the programming DTMF tones. DT will flash on slave radio.
- After all data has been transferred, the display of all radios will read "End", indicating success. Xfer takes approx. 4 minutes.

- If the signal is interrupted or corrupted, the "Slave" displays will read "Err". Turn them off and try again.

Notes:

- Both the Master and Slave radios must have the same number of memory channels available for each band. Example: You can not clone a stock Master to a Slave with ME-1 memory expansion. Also make sure the vhf/uhf sides have the same number of channels configured.
- You can not clone between different Kenwood radio models, even if they seem identical.
- This procedure also xfers the contents of programmable memories.

Be careful when using the clone feature. It has been known to wipe out or scramble memories on the master radio during or right after clone.

Bugs and Problems

To date, I have logged two trouble reports with Kenwood.

The first is the well-known problem with the transmitted PL (CTCSS) tone. The tones are filthy. They contain many harmonics and synthesis noise. I'm guessing this is because they are using 7-bits from the CPU and a resistor net (DAC) to synthesize the tone. The sound/intensity of the noise depends on the actual frequency being generated. The PL tones also come out of the radio's speaker while transmitting. Weird, but not a problem.

The PL noise seems most messed up (on my radio) at 107.2 Hz, where the noise beats with the tone. Go simplex and ask someone to describe the noise to you, or listen carefully to your own speaker while transmitting. Some repeaters do a better job than others of hiding the noise for you.

(New information inserted into r2.0):

==========
Transmit PL Fix
==========

Kenwood just released a Service Bulletin to address the transmitted PL tone noise on the TM-733A. (Yeah!!) Call the Kenwood Service Dept. (1-310-639-7140) if you want a hardcopy. Here's a summary of the text. Use it at your own risk. If you are going to get into your radio with a hot iron, you should first get the real paper from Kenwood with the drawing.

Kenwood Service Bulletin #ASB-1060 2 Pages
Subject: TM-733A PL Tone Distortion August 30, 1994

Symptom:

Transmitted PL tones at the receiving station have a relatively high

level of distortion. This is easily seen when the incoming signal is viewed on an oscilloscope.

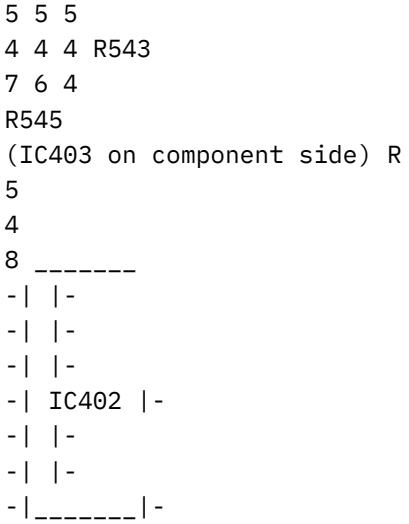
Countermeasure:

Change the value of the "Pull-up" resistors in the PL tone encoder circuit as shown in the accompanying chart and illustration. This reduces the distortion from around 9% to approximately 4%.

Part	OLD value	NEW value
R542	1.8k	2.7k
R543	1.8k	3.3k
R544	1.8k	4.7k
R545	1.8k	6.8k
R546	1.8k	10k
R547	1.8k	10k
R548	1.8k	10k

Procedure:
---
1. Disconnect the power cable, microphone and antenna's, etc.
2. Detach the front panel and set it aside.
3. Remove the top and bottom covers.
4. Remove the speaker and speaker mounting bracket.
5. Disengage the plastic front panel from the main chassis.
6. Carefully disconnect the two ribbon cables from the Tx/Rx unit C/4.
7. Remove the two Phillips head screws that secure the Tx/Rx unit to the chassis.
8. Turn the circuit board over and replace the resistors using the parts list and illustration as a guide.
9. Reverse steps 1-7 for reassembly.

TX-RX Unit (X57-4360-00) Foil Side View



Caution: This modification requires advanced surface mount soldering equipment that is rated for CMOS circuits. It also requires familiarity with advanced surface mount soldering techniques. If you do not have the proper equipment or knowledge do not attempt this modification yourself. Seek qualified assistance from your closest Kenwood Service Center (Long Beach, CA, or Virginia Beach, VA).

The Service Manual specifies a test for the PL. The technician is simply required to verify that any one PL tone is between 500 and 1500 Hz deviation. This is quite a wide tolerance range! The "standard" PL tone deviation should be 750 Hz. Twice that strong might be too strong and become audible. There are no trim-pots on the PL deviation, so I'm guessing that the deviation is pretty constant from radio to radio.

The dirty PL is definitely found on early models, but we have had many reports that the PL problem has been fixed in newer versions of the radio. If you purchased your radio after September 15, 1994, (or your serial number is greater than 55000000) it's a good chance that you may not have the PL problem.

The other problem concerns the DTMF Confirmation Tones. This feature is off by default (I wonder why :), while it seems pretty useful. To turn it on, press [PTT] + [Down] on the microphone while powering the radio on. This will generate short DTMF confirmation tones whenever you send DTMF over the air from the keypad. Unfortunately, it mangles the beginning of the outgoing DTMF tone! This is serious enough that most local repeaters can't detect the tone, or count it as two tones.

Get a receiver and listen to what you are sending out when the Confirmation tones are enabled. It sounds to me like they may be mixing the confirmation tone in with the real tone and getting some destructive interference. Just a guess, though.

I called a Kenwood technician (Ricardo) and worked with him on the phone to reproduce the problem there. So, as of today, this is a Known Problem, and they are looking into a fix. :-)

I am really curious to know what they would say if other folks called up and complained about this problem. Would they deny hearing about it, or would it really be a Known Problem? Might give some insight into the PL-noise denial thing anyway. :-)

Personally, I'm much more concerned about the noisy PL than the DTMF confirmation tones, since I can just shut those off and pretend that feature doesn't exist. If enough people call about the PL problem, maybe they will come out with a real fix and offer it under warranty to all the radios out there (since they're all pretty new). My guess is that it will involve a free TSU-8 tone decode module, but don't hold your breath. :-)

External DTMF Remote Control

The following procedure places the 733 in External DTMF Remote Control.

Note that this mode is different than DTMF Remote Mode. This mode
concerns the control of the 733 with an HT, and not the microphone.

- Press Band Select and select the UHF band.
- Pick a UHF control frequency.
- Turn on the UHF DTSS function and select a tone sequence. (p. 89)
- Turn the UHF DTSS function back off.
- Press Band Select to move to the VHF band.
- Press [CONT SEL] to move control back to the UHF band.
- Turn OFF the radio, press and hold [CONT SEL] while turning the radio
back on, then release [CONT SEL]. The S-meter scale and the DT
indicators for the UHF band will begin flashing. The LOCK indicator
will turn ON, and most front-panel keys (except PWR) will be disabled.
- To begin remote control, you should key the external radio and
press the following key sequence: "Axxx#" where "xxx" is the preset
DTSS code selected earlier.
- If the proper code is received by the 733, the beeper will sound and
the DT indicator will stop flashing. The radio can now be
remotely controlled using the function chart below.
- To return to standby mode, press "A#" on the remote radio.
- To return the radio to normal operation, turn the radio off, then
press and hold [CONT SEL] while turning the radio back on.

Refer to this chart when using the TM-733 in "External DTMF Control".

1 2 3 A
T.ALT ON TONE ON CTCSS ON ENTER

4 5 6 B
T.ALT OFF TONE OFF CTCSS OFF TONE SEL

7 8 9 C
CALL VFO MEMORY REPEATER ON

* 0 # D
DOWN POWER LEVEL UP REPEATER OFF

There are no "shifted" functions. Just one function per button.
After you hit "B" for TONE SELECT, press * or # to go up or down,
and same is true when in VFO mode or in MEMORY mode.
Tones 7, 8, and 9 mimic the three buttons at the top of the 733 mic.

Pressing "C" places the radio in cross band repeat mode. You will
recognize this because of the dots between Kilohertz digits.
After pressing "C", put the radio back into standby mode with "A#".
The 733 will now cross band repeat. To disable cross band repeat, place
the radio back into the External DTMF Remote Control with "Axxx#".
If you can read through the lines, the 733 is capable of operating

as a frequency agile remote base. Now Kenwood just needs a CW IDer!

Assembly Mode Test

In the TM-733 Service Manual, it describes a test mode that I haven't
seen mentioned anywhere else. So, here's the scoop:

Entering Assembly Mode: [CALL] + [MUTE] + [Power On]
All LCD segments should come on. (To exit, power off.)

Press the [VFO] key. *This must always be done first*
The serial port is checked and "F" with "80" on the display indicates
test passed. "1" or "2" means failure.

Different keys now show different displays, with [LOW], [SHIFT],
[TONE], and [REV] also adjusting the backlight intensity.

Set the dials to minimum, then press the [MR] key. Each of the dials
shows the digitized level.

This looks useful for checking all the keys and dials when you suspect
a bad connection.

-------------------------snip here and print---------------------------------

Don't forget the obvious -- post on your local *.wanted and
*.forsale groups, asking for free electronics stuff, and promise
to haul it all off.

You can get some wonderful stuff this way. Especially, offer to haul
off old TV sets, because they have a wealth of good stable coils and
parts in the various oscillators.

4063. FS:Spectras VHF 128 channel

I have bought two of the MFJ pre-wired radio to TNC cables and have had no problems. One was for a Kenwood HT and another was for a Yaesu HT. As I said I have had no problems with either. Just my 2 cents. 73

From: tsarah@gwis.com
Message-ID: <50sbsa$k9s@gwis.com>
Source record: 194522

I am planning on getting active on 6 meters this winter, but am planning on putting up the antenna before the snow flys. Can anyone give me any insite as to what would be a good antenna to buy. I'm thinking a verticle, as there are too many trees to swing a beam. I also want to mount it on a 30' tower that already has a 2 meter and 70 cm antenna at the top and I really don't want to go to a tri-band antenna (if one is even made). I can put an offset mount on the tower with out a problem.

What is a good brand & model?
Am I going to have a problem with other antenna mounted on the tower?

Kent,
I built and am using the FX-440 and like it! I use it as my packet radio and have had no problems. Actually, let me say that while building the kit I discovered that it could not receive at all. After talking to a Ramsey Technician I sent it to them and they discovered that a filter was bad, and replaced it. I also complained of phase noise. They had also heard from others about this same problem and had already came up with a fix which they installed. Overall I give high marks to Ramsey and their kits. Since building this radio I have bought other kits from them and have had no problems.

Just a SHORT note this time, sorry for the last winded
note guys.

I would AVOID any of the STRIPPED DOWN WINDOWS ONLY
model (like the HP 820) printers as they require that
platform as the print engine. You will need a fair bit
of computer hardware for best performance. Also, DOS
application printing may be non-existant or a chore.

I still use DOS based programs, and have configured
many of them to work with my HP660 Inkjet by selecting
older model HP printers in the DOS app. Also, basic
DOS printscreen and such functions work without
resorting to WINDOZE.

Good Luck,
wmk

I in fact tried that, and had a wonderful response from some local electronics firms with gobs of old junk, ripe for stripping, that they didn't want to have to haul away.

And thanks to those with their generous offers! I now have enough homebrew parts coming (or already here) to build just about anything I could want.

Nice bunch of folks here!

This message doesn't mention which wiring you need.
There is a web site with many diagrams for wiring radios to TNCs.

Todd,

It is no problem at all! FT-50R have some sort of voltage/current control subsystem, that detect the battery, and give it a appropriate charge. i.e.: If you have a FNB-40, it will charge some where around 5v, if you have a FNB-41, it will charge some where around 10v.

Several of the diode switched bricks intended to follow HTs switch
fast enough (most of them using relays do too). I use an old surplus
50 watt Motorola brick amp with my TEKK. Works fine. You get faster
keying if you let the TNC PTT drive the amp's external keying line
rather than letting it operate RF sensed, IE wire the radio and amp
keying lines in parallel to the TNC PTT. That's what I do. The amp is
ready by the time the radio is. The RF sense circuit has to rectify
the RF from the radio and charge a capacitor before it will activate
the keying transistor. That usually takes too long.

Don't use a COR in the amp, wire the amp's relay driver direct to the
TNC and let the TNC key both the radio and amp at the same time. Many
amps have external provsion for exactly this use. Otherwise you simply
need to verify the radio and amp keying circuits are not incompatible.

OTOH, the Mitrek is highly recommened here. Only problem is that 40W
or 50W might be too much. :-)

TEKKs are good too. Worst problem we've had is the tiny 50mV drive level
for TX audio is less than the internal noise floor in our DRSI
DPK-9600's.
Actually *that* problem is the DRSI's. Something is badly wrong when you
have 1.2v noise peaks and 700mV of "grass" on the internal power and
ground. If anyone knows of a solution I'd love to hear of it. Of 2 units
one is only half as bad as the other.

Several hams I know with different models of yeasu's (ft-890, ft-990)
experience a frequency jump of about 40 or 50 hz during transmit or
receive while the readout doesnt change, and experances or remedies ??

Yes. That's how you can receive an AM signal in an FM receiver. What
I was trying to say is that I clearly received a transmission from the
'50 on an AM-only receiver, whereas an FM signal from a different
radio on the same frequency was not so intelligible. If it puts out a
signal that an AM receiver can pick up, to me that means it transmits
AM. Like I said in my first post, quite possibly an incorrect
application of terms, but different characteristics from any other HT
I've seen.

So, anyone want to put one on a good scope and see what it's REALLY
doing?

Fred

Are MAHA batteries any good? I haven't heard much about them. Some say they get hot during a charge session.
Not many people sell them, too. AES AND HRO have 'em. They sell them at retail prices. I want to use it on my
FT-50R. Thanks.

Hello Mary. I have a newer FT 736. On 6 it should put out 10 watts in the FM mode. If your not getting full pwr out, carefully check all your connections and the SWR. If your SWR is high, the rig automatically "folds" back the output pwr tp protect the rig. I found that by putting an SWR/PWR meter between the rig and my amp the rig would put out full pwr. Another trick is to trim a short piece to until you get a flat SWR and full pwr. Good luck..Oh Yaesu will deny any knowledge of a problem. After much frustration, I got the real story from the designer of "TE" amps, here in sthe So Cal area. 73 Mike K6YPB

I've recently purchased an Yaesu FT-8000R form HRO here in Portland,
Oregon. When I got it home and hooked it up, I realized I was picking up
"cellular" calls in the 1150mhz to 1200mhz range. I put quotes around
celluar because I didn't think celluar operate at the GHZ range, or I
might be wrong. Also, it might just be harmonics but in the 1150 mhz
range???? Is anyone experiencing that???

Lots of stuff deleted...

I had the chance to witness one of these units recently. I had heard a similar story - that it would transmit an AM signal. I don't know if it will or not, depending on your definitions, and I don't know exactly what the radio was doing, but it can in fact be made to transmit a signal that is perfectly readable on an AM receiver throughout the VHF aircraft band. You can't do that with mode F3E (FM). No kidding.

For those of you wanting answers as to how and why, I publish the following from the FCC:
****

Before the
FEDERAL COMMUNICATIONS COMMISSION
Washington, D.C. 20054

In the Matter of }
}
Timothy Harold Hoffman }
Phoenix, Arizona

OFFICIAL NOTICE OF VIOLATION
(corrected copy)
Released: June 26, 1995
By the Compliance and Information Bureau

I. Introduction
1. This is a Notice of Violation issued in accordance with Section 1.89 of the Rules, 47 C.F.R. § 1.89, to Timothy Harold Hoffman for willful violations of sections 301, 303(n), and 333 of the Coomunications Act of 1934, as amended (47 C.F.R. §§301, 303(n), 333) and sections 15.29, 95.413(a)(4), 95.413(a)(6), 95.426(a)) for operating a radio transmitter on amateur radio service frequencies without a valid license, failing to allow inspection of the radio station by authorized fcc personel, willfully and maliciously interfering with radio communications of licnensed stations, and on CB channel 36 transmitting one-way communications, Transmitting material to amuse or entertain.

II. Background

2. On may 14, 1995, Agents from the Commission's Compliance and Information Bureau (CIB), Using
mobile direction finding techniques, detected radio signals on CB channel 36, J3E emmission (lower
sideband), coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona 85013. The
transmissions consisted of retransmitted signals from an Amateur Radio Service repeater on 147.240
MHz. The following violations were observed from 8:05 until 8:50 pm MST and from 8:55 until 9:15 pm
MST:

Rule Violation Description

47 C.F.R. 95.413(a)(4) Prohibited transmission of one-way communications

47 C.F.R. 95.413(a)(6) Prohibited transmission of any material to amuse or entertain.

3. On May 15, 1995, Agents from the Commissions CIB, Using mobile direction finding
techniques, dtected radio signals being transmitted on 146.340 MHz, F3E emission, coming from an
antenna located at 911 West Highland Avenue, Phoenix, Arizona 85013. The transmissions consisted of
the use of Amateur Radio Service call sign N7ZZT and asking for a new white cane and new eyes, among
other things. Transmissions were observed at 7:44 pm and 8:21 pm MST. At 8:25 pm MST, the FCC
agents attempted to inspect the radio station at 911 West Highland Avenue. The adult male that came
to the door admitted to being Timothy Hoffman and would not allow the agents to inspect the radio
installation. The following Violations were observed this date:

Rule Violated Description

47 U.S.C 301 Transmitting on Amateur Radio Service frequencies without a valid
operator or station license.

47 U.S.C. 333 Willfully and Maliciously interfering with radio communications
of licensed Amateur Radio Service stations.

47 U.S.C 303(n) and Failure to allow station inspection by authorized FCC personel
47 C.F.R. 15.29 and
47 C.F.R. 95.426(a)

III. Discussion

4. Timothy Harold Hoffman was clearly in violation of 47 C.F.R. ¤¤ 15.29, 95.413(a)(4),
95.413(a)(6), and 95.426(a) and in violation of 47 U.S.C. ¤¤ 301, 303(n), and 333.

IV. Ordering Clauses

5. Accordingly, IT IS ORDERED, pursuant to Section 308(b) or the Communications act of 1934, as amended, 47 U.S.C. 308(b) and section 1.89 or the Commission's Rules, 47 C.F.R. 1.89, that Timothy Harold Hoffman submit a written statement concerning the Violations of 47 C.F.R. 15.29, 95.413(a)(4), 95.413(a)(6), and 95.426(a) and of 47 U.S.C. 301, 303(n), and 333 to the following Address:

Federal Communications Commission
P.O. Box 6
Douglas, Arizona 85608-0006

The answer shall contain a statement of action taken to correct the cinditions in violation and
action to preclude recurrence. Each rule section in shown violation shall be addressed seperately.

The staff will use all relevant and material information before it, including the information
disclosed in your reply, to determine what, if any, enforcement action is required to ensure the
current and future Rule compliance. Willful or repeated violation or failure to reply may result in
monetary forfeiture.

A WILLIFULLY FALSE STATEMENT IN RESPONSE TO A REQUEST FOR INFORMATION BY A FEDERAL AGENCY COULD BE
PUNISHABLE BY A FINE OF $10,000 OR IMPRISONMENT FOR 5 YEARS, OR BOTH, UNDER TITLE 18, U.S. CODE
1001.

6. IT IS FURTHER ORDERED that this notice shall be sent by certified mail, return receipt requested, and by regular mail, to Timothy Harold Hoffman, 911 West Highland Avenue, Phoenix,
Arizona 85013.

FEDERAL COMMUNICATIONS COMMISSION

[Signature]
Stephen Y. Tsuya
Engineer in charge
Douglas office

****
END OF FILE.......

****

Since the writing of this notice of violation, Mr. Hoffman has repeatedly violated the terms and
conditions as stated in the above notice. He also jammed emergency communications on the autopatches, falsely reported emergencies, and generally created lots of havoc. He use the Call
N7ZZT on a number of such occasions, as well and the following calls:

AA7KV (Craig Ickes)
K3NPR (invalid call)
K7UZI (Invalid Call)
and others...

His was a pattern of lack of respect for the law. He also used telephone harrassment as a tool to
get what he wanted. This pattern has continued until fairly recently (about 3 weeks before the NAL
was issued). According to the Local Official Observer, numerous tapes and documents were received
regarding this individual and his acctivities. I could not get access to the tapes, or the transcripts of such, as the investigation was still ongoing.

I hope this document answers the many questions you might have regarding this case..

Thank you.

Eric Oyen.

-I built the 2m version a couple of years ago. I found it fairly easy to
-put together, except for soldering the power transistor.

Please do not put a Ramsey transmitter on the air without first tuning it
up with a spectrum analyzer. The 2M kit needs some coil stretching/squeezing
before it puts all the output on the same frequency. The FM-6 "2M
wireless mike" has no output filtering, and looks like a comb generator
on the analyzer. You can pick it up in the 2M band, the aircraft band,
the 3M band, etc.

-After getting it all put together it worked reasonably well, though the
-audio was just so-so. Even with a Ramsey-supplied mod, the RX audio
-popped fairly loudly after letting go the PTT.

A well-known problem. You might want to replace the audio amp with one
that has a mute pin or key a FET switch in series with the audio path.

-But why would you even consider the Ramsey
-kit (for 2m at least) when TenTec has a full-featured kit that actually
-costs a few dollars less?

Definitely a better choice!
/mike

Well, check out the QST and 73 articles from about two years ago
that found that the Ramsey 2M kits had such badly designed filters
that they were illegal to operate.

Ramsey kits tend to be junk - extremely poor design, at a premium
price. If you want a good 2M kit, try the Ten-Tec. It's far superior,
and costs less. :-)

As I understand her story, the HT does work on at least one other
repeater (it's not completely dead). That would suggest that possibly
the channel data she has entered in her radio for that rptr. is corrupt,
and should be re-entered.

This very questions has come up hundreds of time here. The answer seems universally to be NO, NO, A THOUSAND TIMES NO. Cast in stone as they say.

I don't have one myself, but because it CAN'T be modified, I am considering getting one. The reputaion of this radio is that it has a very good front end (relatively) free from intermod and overload, and if used sensibly (don't use you car's 13.8vdc & a rubber duck) it's pretty reliable. The other appealing factor is that it uses the Icom 2, 3, and 04-AT series batteries. I have a 2AT, 3AT, and 04AT. In a word, a BUNCH of batteries. Since nearly all the 2m repeaters around here ar PL'd, the 2AT is pretty useless. That's why I'm considering the HTX-202.

Couldn't see an email address,callsign etc. so I'm unsure whether
you're in USA or Europe!!
In Europe,most ATV is on 24Cms & 10GHz bands using FM Video
modulation,almost the same as used by analogue satellite receivers.
Indeed,most people's receive setup uses TVRO parts.
IN USA,they're "behind the times" in that most ATV uses AM Video
(often on 70Cms band which uses a lot of the available bandwidth).
I know that HRO (Ham Radio Outlet) in USA lists some ATV gear.
There's also an outfit called "ATVQ" who were at Dayton hamfest
when I attended 3 years ago.They had European & USA books on
ATV.
There must also be a national organisation for ATV in the USA.
OTOH,if you're in Europe,give an idea of location or callsign &
I'll respond with where to get info & equipment in Europe.

> other
> (SComm). One of our repeater sites needs a robust and feature rich
> controller
> as we have a 2m repeater linked to 2m, 6m, and 10m remote base systems,
The Linkcom controllers are slowly migrating toward all the features the ACCs had BUT they do have some fetaures the ACCs didnt have! IF all your systems are at one site, the RLC3 can handle up to 8 ports (mix of rptrs, links, remotes) at the same time in the SAME box for a total cost of less than that a basic RC850 cost back in the 80s....

You can run rptrs independantly on a RLC 3 but with a simple command link all of them together!

SCOM and others are good and do what they say....I have had good luck with them, but the Linkcoms are mopre flexible (and yes they are more difficult to program than the ACCs were but they DO allow you some things the ACCs couldnt)

BTW remote bases of a 2mtr system are restricted to rptr subbands ONLY on bands below 2 mtrs. This is because the "remote base" you have can only be called auxillary inputs and outputs of the 2mtr rptr and true remote bases can ONLY be legally controlled and used via aux links operating above 222.15 Mhz....also reverse autopatch can ONLY be operated under the strictest of terms according to the FCC....the rptr cannot make ANY signal, ring, etc on the air WITHOUT the control op answering and screening the call FIRST OFF THE AIR. any other method is illegal under Part 97 and FCC interpretations (this according to email exchanged with the Amateur Division at the FCC)

I am a long time ACC owner and still have my RC850 (sn363) two SM100 Shackmasters, one ITC32 and owned at one time or another a RC85 and DVR.
I now own two RLC3 and have used a RLC2 in our linked rptr system.

Check out LinkCom's web page at www.linkcomm.com

And there is both an ACC and LinkCom remailer list

subscribe via Majordomo@engrng.pitt.edu
and in the BODY of the msg put

subscribe acc
subscribe link
end

and thats it.....you may get asked by the list admin (rich) why you want access....tell him you own an ACC controller and am thinking of changing to a Link system

I have my two RLC3s sounding like my RC850!

> Thanks in advance, ChuckHi Chuck,

I owned the AEA V/U model. I also own an HP network analyzer. When checking the AEA analyzer I discovered that it indicated 1:1 VSWR at VHF when the load was actually 57 Ohms. At UHF it read 1:1 w/ a 75 Ohm load! I called AEA on this and I was told "that is what you should expect for $400." I sold it the next week. The HF model may be better. Also the software they sell separately will not control the UHF model- this is also not told in advance. It will do plots but will not allow the PC to control the instrument.
I own the MFJ 259 and aside from recalibrating the Ohms scale am very happy with it.

I am new to the hobby and plan to start out with a mobile rig. After going through the brochures and talking to the sales people I have almost decided on the FT-8000 but I would appreciate hearing what people actually using it feel. In particular I wonder about how sensitive it is, how it does with intermod, and in general how useful are the different features.

Thanks.

I have a Prolog Model M980 (E)PROM Programmer. Comes with ALL MANUALS and custom attache-case. Includes two adaptors: 2716 (2048x8) and 2732 (4096x8), and a serial interface adapter for connection to a PC. This is a STAND-ALONE unit for programming 24-pin (E)PROMs and PROMs. It will VERIFY BLANK, COPY, READ, EDIT, and WRITE (E)PROMS.

Very good condition. Purchased used for $250. Will sell for $180 (negotiable).

I have TWO Zetron Model 50 DID Telephone Trunk Converters for sale.

These both are in BRAND NEW CONDITION. They were in use for less than a year.

A DID (direct inward dial) line allows each mobile radio or pager to be
reached at a unique, seven-digit telephone number, just as in cellular
service. A caller doesn't have to overdial extra codes in order to reach
a radio or pager.

They were designed to be used with a Zetron Model 45B (Z-Patch), 46
(Trunked Interconnect) or Model 48B (Repeater Manager) but will work with
ANY DID installation.

Rack-mount. All manuals included.

This allows each subscriber to have his own unique telephone number!

Original price was $1,000 each. Willing to sell for $1200 for both or
$700 each (negotiable).

email: kgold@telerama.lm.com

I Have one Zetron Model 810 Digital Hybrid for sale. This is a 2-Wire to 4-wire converter with digital signal processing. It typically is used to connect a standard telephone line to a mobile radio system. It will enhance the audio (especially full-duplex) in trunking, conventional and cellular radio systems.

This unit is in excellent condition. It was in-service for less than a year.

Rack-mount. With Instructions.

Originally purchased for $900. Will sell for $600 (negotiable).

Source record: 194502
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.space

The full spec's for the FT-736 can be found at;

http://www.yaesu.com/736spec.html

It seems Yaesu has changed the spec to state input power, not output power anymore. When I was looking at it a few years back all bands were 25W out except 1.2Ghz, which was 10W. Now you don't know what you'll get. Way too expensive for me and not know what you're getting!

I am contemplating buying a Swan 250C 6-meter rig.

Can anyone tell me anything about this rig? specifically:

1. Modes (CW/SSB I believe)
2. All tubes, or Hybrid?
3. Power output?
4. Band coverage?
5. Overall quality and opinion?
6. What is a fair price (including power supply)?
7. What is difference between 250 and 250C?

Any help or opinions would be greatly appreciated.

I don't remember reading this, but I will check on it. One of the
problems of not having test equipment is knowing if it is doing
something strange.

> Ramsey kits tend to be junk - extremely poor design, at a premium
>price. If you want a good 2M kit, try the Ten-Tec. It's far superior,
>and costs less. :-)

I built the FX-440 back in the Spring of '93 and it has been my packet
radio since. I don't know if it is junk, but it does its job for me.
By the way, 73 Magazine carried a review on the Ramsey's 20 meter
SSB/CW qrp radio and liked it. I will agree that many of Ramsey's
kits are on the simple side and their cases leave alot to be desired
(especially if you grew up on Heathkit). I have heard alot about
Ten-Tec and plan to check them out.

4148. Drake "C" line Tunning cure

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-08 00:00:00 UTC
From: scotgray@cwnet.COM
Message-ID: <323257B7.639D@cwnet.com>
Source record: 194553

I posted (to ham.equip) earlier:

"I have a mint Drake R4C receiver. Works Great. I also have a Drake TR-4 which I recently purchased at a swapfest. The TR-4 seems to have been built during the "B" line era; Tunning knob has the 1 KHz markings on the Dial Skirt. The "C" line has a concentric window still announcing a 1 KHz resolution. My question is about "backlash" or a tighter, less smoothing feel on the "C" line, wheras the R4, R4A, TR-4 and R4B have a much smoother feel. Is this normal for the "C"? Can it be fixed?"

Got many helpful responses. Thanks to all who responded!

The Fix:

Backlash: took apart the PTO and found the nut at the end of the ferrite tunning rod loose. Used a light application of epoxy. Made sure it was very dry put the PTO back together. Problem gone.

Tight or Sticky tunning:
Instructed by Drake: Pull the PTO, tighten the bearings within the PTO, turning the shaft back and forth a few times, then backing off the tension
on the bearings (done with a 3/32 allen "long") be careful not to back off
too much or you'll get a lesson in bearing finding and repacking (Drake dude didn't warn me). Then I finally took the nylon gears apart
and appllied various (graphite powder,then silicone oil)lubricants.
The lubricants made the gears even stick and jerk more!. Noticed the two larger gears on the shaft that attach to the 1 and 100 KHz dials were sticking together. Worked the gears apart, cleaned out the remaining lubricant.
Still sticking but not as bad. Pulled the gears apart again and carefully
began (gently)sanding the inside nylon gear hole with 300 sandpaper.
Success!!!
Now tunes as smooth as the R4 A/B, can't tell them apart blinfolded.

Now looking for a AM filter of 4/6/8 kHz for the R4C. Any help?

73

4149. Re: 6 Meter Ant question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-08 00:00:00 UTC
From: WWDC12A@prodigy.com
Message-ID: <50tl26$1fra@useneta1.news.prodigy.com>
Source record: 194554

A verticle will work fine on fm; but if you are planning on working much 6m sideband you will find it lacking in performance (cross polarized).

When the band is really open this effect will be minimal; but for local use it will be very noticeable. I would recommend that you go with some sort of horizontal antenna. Yagi, dipole, or loop. The higher the better and as many elements as possible.

Best Regards,

Dave, AB5WX

: Frank
: KE6MTA
: fkt@aol.com

I use the Maha NiMH PB-32 and PB-34 batteries (for Kenwood TH-79 and others).

So far, so good. The PB-32 is a small battery with more capacity than stock (6.0V 900 mAh instead of 600 mAh). The PB-34 (9.6V 900 mAh), on first quick charge, appeared dead immediately after the charge finished, but came to life again after 10 or so minutes of cooling. This seemed to be the battery's thermal protection kicking in.

Since that first charge, the PB-34 hasn't done that again. I expect the NiMH batteries to have a higher self-discharge rate than NiCd, but I use my rig every day, so I don't notice any difference.

The workmanship in the Maha battery cases seems to be a bit better than Periphex (another aftermarket battery) but still not as clean as Kenwood's batteries. Fit is ok for all of 'em. That said, I've not had any battery failures or weirdness in any of the brands and all of 'em work fine for me.

I have grown to like using NiMH batteries in my cell phone, owing to the greater capacity in a smaller package. One suggestion I have - use trickle charge whenever possible, instead of quick charge, and they'll last 2-3x longer. Even the Maha literature says that.

I wonder if anyone knows of any modifications for the
ICOM IC-970 vhf/uhf multimode transceiver.
I am particularly interested in any mods to expand
the range of the add-on receiver unit (UX-R96)
as it covers 50 to 905 MHz yet I heard a rumour
that there is a way to expand this.
Mods for IC-970 don't seem to appear in any of the
usual places for mods on thw WWW.

Probably not.

All noise must come from one direction with one polarization for this unit
to be effective. That usually means only one source. If only one noise
source is the problem, it can remove one.

4153. Re: Yaesu FT-50R, crackling noise on UHF transmit

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-08 00:00:00 UTC
From: Thomas Gasta <tomgasta@worldnet.att.net>
Message-ID: <50ucn4$8nh@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 194558

Regarding your UHF noise, I had an FT40 that had the same problem. I had to send it back twice, and on the third return they sent me a new one that did not have the problem and has been fine. This may be the same problem you have. Does it stop when you select low (100milliwatt) power? Mine stopped making the noise on Low power and it would not do it into a dummy load, indicating an RF problem. It really pissed me off, but if he has this problem, INSIST that yaesu or the dealer keep replacing it until he gets one that doesn't.

You bet you. There are many collectors our there, myself included. Do not expect to get close to what you paid for the receiver. If you planning on selling make sure you list all the options, including manuals, you have for the receiver and off course the physical condition of the receiver. If there is anything that you know of that does not work list that also.

Hello and thanks for reading this one!. I have a problem with my walky;
it is a KENWOOD TR-2600E, 2 meter.

Well, the problem began when internal battery went faulty; then an 'UL'
sign appeared at screen. Following the manual instructions, I changed the
battery. But now, it only works from 150MHz and higher frequencies; if
you select lower ones, you get always the 'UL' message. I've tryed to
RESET the memory, lift the battery and lots of things!. I suppose there
should be a possibility to do a 'special reset', but I don't know how!

Please, any idea will be wellcomed!

Thanks!

4167. IC-706 vs IC-736 ??

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-09 00:00:00 UTC
From: <>
Message-ID: <5118vs$1hg@hermes.dna.mci.com>
Source record: 194372

I have seen several postings and writeups over the last several months
that describe the receiver in the 706 as being somewhat less than desirable.

I'm looking to get a new rig for HF & 6M (for base use) and was wondering,
is the receiver in the 706 really that bad? And is the IC-736 any better?
Could anyone offer a comparison here?

My decision<sp> will be based mainly on whether my new QTH is an apartment
or house, but wanted to ask anyway.

4168. ICOM IC-2GXAT channel memory bug?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-09 00:00:00 UTC
From: Walter Lamia <lamia@fc.hp.com>
Message-ID: <323430FC.F8B@fc.hp.com>
Source record: 194373

I have a new -GXAT and found something very peculiar, and was wondering if anyone else had seen it. When I tried putting 147.400 in an ODD numbered channel, such as 25 or 35, it stored the frequency as 147.500! If I store it in an EVEN channel, like 26 or 36, it works OK. I have not noticed this on any other frequency, although I have not systematically researched the problem.

Is this a known bug of some sort, and is there any known fix for it?

4170. IC706 thinks 11 MHz is ham band?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-09 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfDxH0vx.BE0@netcom.com>
Source record: 194375

While fiddling with the IC706 last week, I put it into the general coverage Tune Step mode (stepping 1 MHz), and had it set somewhere on 11 MHz. Then I got distracted, and absent mindedly was pushing (probably a long duration push) one or more of the buttons. Of course I don't remember what I did.

I have since noticed that the IC706 thinks 11 MHz is a ham band, when stepping through bands (TS general coverage mode off). I doubt it transmits there; it just seems to go 1.8-3.5-7.0-10.0-11.0-14.0-18.1-21.0-24.9-28.0-50.0-144.0 as it steps through the bands.

Any comment on this (mis?) behavior?

Dear Dave,

Sorry, there have been no touch-up paint kits for the Kenwood radios.
The casings are powder coated when painted. I will forward your comments
to our Product Planners. There can be a slight difference in color even
with the new radios from batch to batch.

Have you tried reseting the CPU? To do this you turn the radio on while
holding in the A=B button. I had problems with mine doing crazy things
and this would cure it for a little while. I finaly had to remove the
CPU (which was mounted in a socket) and solder it directly into the
printed circuit board. I am including the MOD file whick I followed to
do the above.
Hope it will help
Good luck

Sb: TS-940 ERATIC DISPLAY INFO.

SB-951
TS-940S ERRATIC D 01/20/89

Intermittent control or display problems that are difficult
to correct with the reset procedure may be caused by a
faulty ROM socket. The socket should be checked to insure
that it makes good electrical contact with each pin of the
ROM. If it is found to be intermittent, remove the socket
and solder the ROM directly to the board. It should be
noted that units between serial numbers 701XXXX to 811XXXX
and from 903XXXX to 909XXXX are not likely to have this

failure. In addition, units with a serial number of 909XXXX and above do not incorporate a socket.

CAUTION

Removing the socket requires good soldering skills. The ROM is mounted on the Digital A unit and is designated as IC2. The board, being double sided, has solder connections on both component and foil sides. When the socket is removed, it is very important to insure that each pin is completely solder free. Having to pry up on the socket means that it is not completely desoldered and will cause the circuit foils to tear.

When performing any work on the Digital A board, CMOS handling techniques must be observed. Such techniques include using a grounded or isolated soldering tip, avoid touching the pins of IC chips with your fingers, and ground yourself with a wrist ground strap.

To remove the socket:

1. Disconnect the power cord and antenna coax.

2. Remove the top and bottom covers from the transceiver.

3. Remove the 2 flat head screws from each side of the front panel chassis.

4. Loosen the round head screw on each side of the front panel chassis.

5. Carefully rotate the front panel forward. It will be necessary to unplug the VS-1 cable from the transceiver.

6. Remove the 4 screws from the speaker mount.

7. Carefully pull up on the mount and rotate it toward the front panel. Swing the mount toward the right side of the transceiver and allow it to rest on the Digital B unit shield.

8. Remove the 8 screws from the Digital A unit shield plate.

9. Lift the plate and rotate it to the left side of the transceiver.

10. While avoiding contact with the pins, remove the ROM (IC2) and set it aside on anti-static foam.

11. Remove the 6 screws that mount the Digital A board. Rotate the board toward the front panel to expose the bottom side of the board.

12. Carefully desolder the socket and remove it from the
board. Do not pry up on the socket. If it does not
easily pull off the board, the top foils are still
soldered to the socket.

13. Install the ROM in the board and solder it in place.

14. Assemble the transceiver by reversing steps 1 - 11. Do
not pinch the power switch cables between the front
panel and the body of the transceiver.
Time required for this modification is 1.5 hrs or less. (C)
011189TKC
==========
Note: you might find it easier to break apart the plastic of the
socket and remove the pins one by one. And/Or use a better grade of
socket.
Try just removing and reinserting the Rom in its socket to see
if this fixes the problem before you go to all this trouble. This
might clean a dirty socket contact. Anyway....
I haven't tried or verified this, proceed at your own risk. WA2ISE

Hi!

I am having a little problem. I have to expand our company's radio system, and I have to purchase radios with DTMF keypad (we have also radio-phone system), but they have to be RCS 2000 - Camus mode compliant. We are using Motorola MX3000 (Stornophone7000) devices at the moment, but due to it's price and quantity we would like to buy, we are seeking for some cheaper solution. (By the way, I heard something about some new software for MX3000. Anybody has it? What are new features, if any?)

So, I was told that Alinco's DJ-130 model is Camus compatible, but local dealer couldn't confirm it. Also, I heard that DJ-182 with its Al-trunk logic board (which operates with CTCSS) could be MODIEFIED to be Camus mode compatible. Is there anybody from Alinco who could tell me if this is possible, and how?

Also, one friend told me that ICOM-H16T (#17), with Logic-A-Unit (EP701, PCB B1580H) is Camus mode compatible, and he wasn't sure, but also told me that ICOM IC-F30LT with UT-96 5 tone unit is also Camus capable. But, same thing as with Alinco, local delares couldn't confirm or deny it. Anybody knows it? Is there any e-mail contact in Icom where I could check it?

And finaly, it doesn't have to be Alinco or Icom, it could be also Yaesu, Kenwood, Standard, Harris... but I have to know is it Camus mode compatible, and how to order such option or modification from manufactorer/dealer.

If anybody knows something about it, I would like to ask him to send me a note _by mail_, since I wouldn't like to miss such importnat message by skiping it somehow in newsgroup.
Thanx for understanding!

4180. Re: Yaesu 736 6mtr module Q?

>After much frustration, I got the real story from the designer of "TE"
>amps, here in sthe So Cal area. 73 Mike K6YPB

Of course Yaesu will deny there's a problem. That's because there
isn't a problem with the radio. It is performing exactly as intended,
and exactly as any other competently designed radio would perform
when offered a grossly bad load.

The problem is in the amplifier. It is not presenting a good load
to the radio. If the amplifier designer were competent, there would
be a 50 ohm impedance presented by the amplifier to the radio.
Unfortunately, that doesn't appear to be the case with some
amateur amplifiers. (The input "networks" are often a bad joke.)

Using a length of 50 ohm cable as a transmission line transformer
can transform the impedance presented by the amplifier to some other
value, but it can't transform it to 50 ohms. So you can't present a
perfect load to the radio this way. You sometimes can get it "good
enough", however, since the radio doesn't start to fold back power
until the presented impedance is outside the range of 25-100 ohms.

Note that the impedance may be complex, and depending on the reactive
part of the impedance, the range over which you can deliver a "good
enough" load impedance may be smaller than the range that would apply
for a purely resistive termination.

You *can* use a transmission line transformer to transform some
presented impedance to 50 ohms, but the transmission line's
characteristic impedance has to be something other than 50 ohms,

IE 75 ohm quarterwave lines are conventionally used to transform
a 100 ohm impedance to a 50 ohm impedance for example. You can
easily figure this out using the Smith Chart.

The better course is to fix the problem with the amplifier's input
network so that it actually presents a 50 ohm load to the radio.
Then the length of the transmission line between radio and amp
won't matter (a transmission line won't act as a transformer if
there is 1:1 VSWR on it).

Now Alan doesn't say he's using an amplifier, so if he's seeing
foldback, it is because the antenna he is using isn't presenting
a good load impedance. Again, the correct solution is to fix the
problem, which in this case is at the antenna. The antenna may
be reactive because it isn't resonant on 6m. Or if it is a groundplane,
it'll have a 36 ohm base impedance anyway, unless the radials are
drooped to about a 45 degree angle below horizontal, which will
raise the base impedance up near 50 ohms. Etc. He may even have
a bad piece of coax, or an improperly installed coax connector,
causing a bad load to be presented to the radio.

Note, if he is seeing this power reduction into a known good
dummy load fed with a known good cable, then there really is a
problem in his radio.

>it relatively simple or should I send the thing to Rat Shack for work?

>Any help would be appreciated!

>Kevin
>KB0UEU

I adjusted mine about two weeks ago. It's real simple. I *think* there
are instructions at this web site...
http://ourworld.compuserve.com/homepages/wa3rvt/htx-202.htm
but I just looked at my schematic and the rest was obvious. Anyway,
if you open your unit up, there are a couple of pots you can tweek.
The one near the top (nearest the antenna, etc.) is for power output
and the one closer to the bottom is for mic gain. The more I turned
mine clockwise, the *less* mic gain I had.

4183. HW101****tune for maximum smoke

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-09 00:00:00 UTC
From: tonyz@rose.hp.com
Message-ID: <511pdt$6ef@rosenews.rose.hp.com>
Source record: 194388

Hi there. I have an old hotwater 101 I bought here on the internet
about 4 years ago. At the time, the seller said 'worked the last time
I turned it on'.

When I first turned it on 4 years ago, I just got a horrendous
howl out of the rcvr and so put it aside for a rainy day.

So now that I have proper tools and equipment to start working
on my projects, I thought I'd try to find out what this
xcvr was doing.

Found a bad 6AU6 1st IF amp bad. Then, noticed I could only
rcv on LSB. This turned out to be a bad xtal in the carrier
oscillator used during rcv mode for USB and CW.

Won't be getting one of those for a while, so I thought then
I'd try to tune up.

Surprise! I can honestly say that I have never encountered a
situation where the plates glow red in final amps. I always
joked about 'tuning for maximum smoke', but that is what I
have here.

At no signal condition (driver 6CL6 is not providing input the
the final grids) the plate (acutally, metered off the cathodes
of the 6146's in parallel) current is set at the required 50 mA.

The plate voltage is in spec. and at 800 Vdc.

The screen voltage, when applied at the tune position of
the function switch is also in spec.

Why the heck would my 6146 plates be glowing red?

Of course, this condition doesnt allow me to tune up at
all, and any attempt only further increases the edison effect
at the plates. The meter appears to be fine, in rcv mode, the
avc is indicated correctly. I have checked for any shorts,
etc in the tank circuit, the load presented to the tank circuit
is 50 ohms (dummy load) and checks out. I have tried 3 pairs
of 6146 finals and just can't figure out what is happening.

During tuning, increasing the drive from the 6CL6 doesnt
make the meter move a hair in the relative power out setting,
but plate current is indicated. Yet, a swr meter is indicating
forward rf power. The relative power meter circuit checks out,
no shorts, detector diode working, etc. etc.

Is there something I am missing? Proper biasing, plate and screen voltage, idle plate current (no input signal) at rated 50 mA. And the plates glow red?

I was thinking of possibly the finals are reacting to some kind of parasitic oscillation, but short of actually disconnecting the incoming rf from the 6CL6 physically but removing the mylar capacitor, I can't see how this much power could be generated by a parasitic to cause the plates to melt. Shouldn't I be seeing the plate idle current reflect this, unless the parasitic is in the uhv/vhf range?

Help, Mr. Wizard!

Thanks, Tony

Sorry, I've tried it with a couple of ICOM HT's, but with bad results.
The European repeaters should only accept 1750Hz +- 50Hz, so You have to
be pretty close..

I had to modify my IC-2SAT by moving a diode and putting in an extra
resistor to allow the 1750Hz burst.

Try whistling into the mic. It works!

I wouldn't trust that current reading. I've often has red plates but
never yet managed it without current. It sounds just like a story
for a Wayne Green cold fusion column. Try inserting a meter in the
plate choke feed and double check it by reading the real thing.
Could it be closer to 500mA? Maybe the cathode resistor bypass is
leaky or some other component shift near to the meter circuitry.

Frank, I have two of the FNB41 MAHA batteries and they are superb in my opinion. First off...they are 900Mah vice 600Mah for the Nicads. Second...they will top off quickly, they do NOT lose their charge as fast as the earlier generation of NiMH batteries would do. I bought two for my FT50R and have no problem with any heating or abormal events using the Yaesu standard wall charger you get with your FT50, nor with their desktop rapid charger. I ordered mine direct from MAHA (see QST or CQ ad) and Mister Maha shipped them same day. Tell him you have heard wonderful things about his batteries...and ask him for a discount if you buy two. (hint). I like NiMH batteries far better than Nicad. The cost difference is decreasing each 6 months. 73 <N1FSK>

I owned one of these radios when they were "the synthisized" 2-meter rig.
The closest competition was the Clegg radio - YUK. You might be able to
put one of these radios on every other 20 kHz frequency without changing
Xtals, but that's the best you'll do. I put mine on the 15 kHz splits
for Calif (at the time), but spent over $100 (in 20-year-old $$) in
doing so. You can rubber the existing Xtals around a bit using the
existing series inductors and shunt capacitors. However, some of the
XTALS may not pull as far as you need, and other may cease to
oscillate. Good luck! By the way, I still have the instruction
book, if you need a copy. This, I think, includes schematic.

Sincerely:

Dave - W6LEV

Good idea, thanks Tony.

I am trusting that the grid bias of -62 volts (I read -67 volts)
that the manual says is what should be giving me a 50 mA idle
plate current is true.

And now I am going to have to do just that, insert my triplett
and see just what the current really is, at -67 vdc bias at the
grids.

For all the work it's taking me, it really is turning out to be
a lot of fun. I have to sneak this though, the wifey unit is
getting irritated at my being in the garage all night every night.

Cheers,

Tony

Hi!

I am having a little problem. I have to expand our company's radio system, and I have to purchase radios with DTMF keypad (we have also radio-phone system), but they have to be RCS 2200 - Camus mode compliant. We are using Motorola MX3000 (Stornophone7000) devices at the moment, but due to it's price and quantity we would like to buy, we are seeking for some cheaper solution. (By the way, I heard something about some new software for MX3000. Anybody has it? What are new features, if any?)

So, I was told that Alinco's DJ-130 model is Camus compatible, but local dealer couldn't confirm it. Also, I heard that DJ-182 with its Al-trunk logic board (which operates with CTCSS) could be MODIEFIED to be Camus mode compatible. Is there anybody from Alinco who could tell me if this is possible, and how?

Also, one friend told me that ICOM-H16T (#17), with Logic-A-Unit (EP701, PCB B1580H) is Camus mode compatible, and he wasn't sure, but also told me that ICOM IC-F30LT with UT-96 5 tone unit is also Camus capable. But, same thing as with Alinco, local delares couldn't confirm or deny it. Anybody knows it? Is there any e-mail contact in Icom where I could check it?

And finaly, it doesn't have to be Alinco or Icom, it could be also Yaesu, Kenwood, Standard, Harris... but I have to know is it Camus mode compatible, and how to order such option or modification from manufactorer/dealer.

If anybody knows something about it, I would like to ask him to send me a note _by mail_, since I wouldn't like to miss such importnat message by skiping it somehow in newsgroup.

Thanx for understanding!

Just found someone with an IC-25A and an IC-45A sitting on a shelf.
Look to be in good condition, neither has a hand mic.

What do you think they are worth and what are there features ie tones,
power output, mods etc

The IC 25 is a 2m mobile

the IC 45 is a 70cm mobile

Thanks

>
> Is this correct, or is it overcharging my battery?

The battery experts out there can explain this better than I, but in my experience charging nicads, the fully charged voltage is usually 10-20% greater than the nominal voltage rating. I've found this to be the case with many battery packs as well as AA & D single cells, using both quick & trickle chargers. Additionally, when the charged voltage drops below ~20% of the nominal, the battery is pretty much dead.

In other words, what you're experiencing is normal.

Here is a way to quickly, easily generate large streams of cash in relatively little time with very little investment. It's worked for others and unlike most get-rich-quick schemes, it will work for you. Does a $7,000 return on a $7 investment sound like a worthwhile opportunity? $17,000? $27,000? If you could use that type of money, and you can spare seven bucks - five $1 bills, envelopes and postage - read on. I know you're skeptical, and so was I at first, but I ask you to please read on and get all the facts before you write off this incredible, legal business opportunity. Someone else wrote the instructions below, but they did such a good job I figured "why mess around with them?" They might seem long-winded, but please bear with them - you *will* thank yourself later... if you're paying an hourly connection fee, it probably doesn't matter since you'll soon be swimming in cash anyway. But if it's really a concern, download this article to your computer or print it out and read it offline. You will NOT be sorry! Here are the instructions:

****
*

!!!HONESTY IS WHAT MAKES THIS PLAN WORK!!!

****
*
I wrote a small note to send with the dollar saying "please add my name to your list." I then took the first name on the list off and moved the
rest of the names up one slot. Then I added my name in the number 5 slot of the list (The placing your name on the list is where you make money). I then took the new list of names, which now included my own, and E-Mailed it to every BBS operator in Fidonet, which is a group of BBS operators across the world. I figured that was a good way to get it to a lot of people fast. I then sat and waited for the money to come in. I was expecting to maybe make, at the most $500 to $600 dollars, or at least somewhere in that area.

The secret from my wife was out after about 2 to 3 weeks. It became very hard to keep the secret any longer from her, because of the return addresses. She was wanting to know who, what and why there people from all over the world where sending me a dollar bill. I then explained it to her and she could not believe it. The mail continued to come in every day. My mail carrier even questioned me once or twice. it was a feeling beyond belief. I guess that you want to know how much I made now? Well, I did not reach $35,000, but I did bring

in $14,684. I just could not believe that it worked this well.

The first thing I did was pay off mine and my wife's car. It felt so good calling the bank and asking for a payoff. I then took the rest of the money and paid off as many of my credit cards as I could. Now after 1 year, I am ready to do it again. This time my spouse suggested USEGROUPS on the Internet, and I believe that it should work better than before. I think that someone could hit that $35,000 mark, but I do not know that yet. It all really depends on you, the individual. You have to follow through and re-post this message everywhere you can put it. the more people you get it to the better the response you will get. It is just too easy to pass up this money making system!

I will say this much about this system, it works! I got hold of this list after it had already been all over my home town. I have talked with everyone of the below list, and they said that they started out thinking that it would not work. Most of them made more than I did on the first go around. I am not yet really sure who started this thing or really where, but THANKS!"

!!A LOOK AT THE REASONS YOU NEED TO DO THIS!!

Let's look at the reasons you need to do this. First of all it only costs less than $7 - 5 $1 bills, 5 $0.32 stamps, and 5 envelopes that you need to mail to the 5 names on the list. Then simply re-post the message and list, with your name on it, to all the USEGROUPS and public BBS's you can. Then just sit back, relax, and enjoy receiving mail in your mailbox - mail with dollar bills in every envelope! Everybody has $5 dollars to put in something that will make them $10,000 to $15,000 dollars in about 3-6 weeks. Ask yourself this simple question, "Where can I get $5?" Take lunch to work one day, drink water instead of pop or tea five times, hold off on those lottery tickets, and put $5 dollars in this MONEY MAKING SYSTEM NOW! It is really hard to lose.

Follow these instructions step-by-step if you are ready to make some money. You might want to make a printout of these steps to make them easier to follow.

1. On a blank piece of paper write the following message:

"Please add my name to your list".
** YOUR NAME AND ADDRESS **

You will be paying for a legitimate service and making this money system completely legal. You will not be just sending a dollar to someone, but paying for the legitimate service of adding your name to their list. Make sure to also write down your name and address on this piece of paper. I assure you once again that this is completely legal!

2. Fold your piece of paper around the dollar bill, (NO CHECKS OR MONEY ORDERS), and put both in the envelope. Address an envelope to all 5 of the people on the list. You will find that list at the end of this message.

3. Now, here is where you make your money. Look at your list of 5 people. Remove the name in slot number 1, and move all the other names up 1 slot. For instance, move the name in slot number 2 up to slot number 1. The name in slot number 3 then moves up to slot number 2. The name in slot number 4 should then be moved up to slot number 3, then finally the name in slot number 5 up to slot number 4. Then put you name and complete mailing address in slot number 5.

4. Now, upload this updated file, with your name in slot number 5, to as many USEGROUPS and BBS conference areas and file areas as you can. Remember the more people that get the message to the better the response will be for you, and the other people on the list. Give the message a real eye catching name so it will catch someone's eye. Some examples are: "Need some extra money?", "Need some money quick?", "A way to pay off your bills fast!!!", or "Money!". Set a goal on how much money you want to make and keep these numbers in mind at all times. With this goal in mind, you will get a good figure of how many people must read the message and then respond. You can make it easier for people to receive your message in USEGROUPS by UUE encoding the file when you are uploading it. That way people can download it to their hard drive or a floppy. Don't alter the file type, leave it as a MS-DOS Text file. The best way to test the file is to open the file using Notepad in windows to make sure the margins look right. You should make sure that the viewing person does not have to slide the screens back and forth to read the message. One other thing about the list of names, you should not try any funny editing of the list of names.
You should add only your name and no others to the list. If you want a friend to do it with you give them a copy of your edited list, with your name on it, so you can make a dollar for yourself.

5. If you need help uploading your file, ask someone on the system you are trying to upload to. Somebody will always help you with the matter. When you upload it as a file on a BBS by sure to give the file an eye catching name like: "CASH.TXT", or "MONEY.TXT".

6. After you do all the above steps sit back and wait for the money to come in. Expect to see some money start in about 2 weeks. When week 3-4 rolls around, the money will really start coming. It is more than just a normal feeling to see all the money that you will receive.

7. Now you pay off all your debts, and then go and buy something that you have always wanted or maybe something that you have always wanted to get someone else. After that, just enjoy life!

8. When you have spent all of that money, simply start posting the same message again. Post it in the old places, and maybe some new

places. Don't just delete this file after the first time, because you
can reuse it time and time again in the same
way you did the first time.

The list of names are below.

>Hello..

I have a kenwood TW-4000A dual bander.

2m/440m 25watts each band... All works fine except for scan
I never tried to fix it since it stopped scanning. It has 2
antenna ports so you can use 2 antennas. It also has the
PL tone encoder option in it. Also it has the optional voice
readout so it will talk to you in english or japanese!
touch tone mic with up/down. I have of course the original
box/manual/packing/mount etc... even the warranty card hi hi
Of course it shows some wear but has only been mobile for the

past year. I think it could stand to be opened up and have all
the daughter board connections cleaned and tightened up. In
very cold weather when you hit a bump it gets a little distortion
in the receive audio, I havent snooped into it for the lack of
time but I can almost guarantee it is a loose ground on the
audio amp daughter board. But I have lived with it for a year
so it isnt that bad.
Rig has 10 memories on each band and 2 vfo's, and priority watch.
I dont know what to ask for it but if you interested in it make
me an offer and I'll get back to you..

Thanks
Chet

Hi:
You should be able to do a jumper mod to expand the rx range,
but you may not have any luck on expanding the tx.
If you radio has a "J" mark on the back of the unit or
on the out side of the packaging carton, the expanded
tx is impossible without a cpu swap.

I have a differential type meter...you "tune in" the center temp you want,
and then the meter shows + or -; also a tone is generated changing in
pitch as you get further away from the zero point.
what temp range do you need?

Hello,

I have a question about putting together a packet radio set
up at home. Currently, I have a Power Mac 6214CD, a handheld
2m Transceiver from Radio Shack HTX-202 and a 28.8 Microcom
modem (i guess this modem would not help, right ?).

Can anyone give me some advice on what sort of hardware and software I
might need to experiment with packet radio ? My budget is about
100.00 $ (perhaps less but definitely not more).

Thanks in advance,
Srikanth, KB0TRX.

Hi,

We are doing a lunar rover demonstration project for NASA where we are trying
to demonstrate some robotic technologies needed for long distane/long
duration lunar missions. For this project we need to point an antenna
from a "moving" robot towards an antenna on a control tower located
about 10 miles away (line-of-sight). We need to close the feedback loop
to make sure we are pointing in the right direction. The radio which
we are planning to use (probably Airlink E1 radio from cylink) doesn't
give us receive signal strength and we need other ways to find out the
pointing error. Vision based techniques do not seem appropriate for
such long range. Radio beacons are extensively used for airplanes etc.
and seem appropriate. Any information on radio beacons or suggestions
on other ways to close the feedback loop would be greatly appreciated.

Thanks a lot

Deepak

On a few occasions, my Kenwood TM-733 has gone rather berserk.
Specifically, it won't give me UHF memory channels (although the UHF VFO
and call channel operate normally). In the event this ever happens to
you, do the following:

Perform a VFO reset (VFO + PWR on). Your display will read:

144.000 440.000

And your memories should be back to normal (intact, of course).

Please e-mail me if this has happened to you--maybe its just a defect in
my rig.

From: landisj@nad.com
Message-ID: <1996Sep10.193835.631@main03>
Source record: 194442

I bought a $5 rotator at a hamfest last week, mostly because I needed the mast mounting bell that came with it. Now I'm curious if the rotator itself may be ok, and just need a control box or a little tlc. But it has no real distinguishing marks other that a stamping on the bottom: TR4 SER11 Z1.
Also, It uses a 4 conductor control cable. Anyone know what this is? Is it worth tracking down a wiring diagram to troubleshoot it? Anyone have one?
Thanks es 73

> had the same problem with the internal mic.

Kevin, how do you know you have a "deviation" problem? You should have the
unit checked. Many clubs have the ability to do that at meetings, usually for free.

The Speaker/Mic they sell IS kinda hot as far as deviation goes, but usually
is just fine unless you yell at it. The built in mic in the HT is very sensitive.
Normal speaking voice several inches from the unit is apropriate.

Anyway, first thing is to have it checked, with YOUR voice and YOUR mic
techniques.

> it is a KENWOOD TR-2600E, 2 meter.
>
> Well, the problem began when internal battery went faulty; then an 'UL'
> sign appeared at screen.

"UL" appearing on the display indicates that the phase-lock loop (which generates the actual signal used in the radio is UnLocked ... if it works from 150 MHz up, it may be a minor adjustment needed ... or it might be further work necessary.

If you have service capabilities, you might get the service manual and go from there ... but only if you have the test equipment (service monitor) and capability to do it ... if you don't have that available to you, seek out a good service shop.

With this radio being approximately 15 years old, many of the parts are no longer available ... you might consider "retiring" the radio and picking up something a bit more modern.

Either way, good luck, and very 73!

The question is, how efficiently is it using the channel? If you have to run a TXDelay parameter of more than 50mS (which should be the absolute maximum considered usable for 9k6) then you're spending more time sending sync flags and rubbish than actual data!

Any radio not capable of operating on a channel running a TXD of 10-20mS is *not* 9600 ready, regardless of what the manufacturer, retailer or friendly ham down the road says.

Quite separate from the TX problem is the question of how long does the receiver take to lock onto an incoming signal...I guarantee that if somebody transmitted a 9600bd data packet to you with a 10mS TXD it would be gone before your RX even knew it was there. Get a whole group of people on a channel with radios capable of that and get them talking and then put *one* user on the channel with a slow radio and *nobody* will get any useable throughput from that point on! Why? Because the slow radio won't hear any of the other traffic and will continually transmit retries over the top.

To reiterate, any radio not capable of running between 10 and 50mS TXdelay (or coping with others doing so) is *not* suitable for or capable of efficient 9600bd packet operation.

Regards,
Rod.

If your're going to run SSB stay away from the vertical!!!!! Use a small yagi or, if you want omni directional, an MFJ or other "halo" type of horizontal loop.

If you want to use only 6M FM then use the vertical.

>bchadwi@bsu.net
Hello, I have a 2350H from ICOM and like it a lot. Yes, it will do cross band
repeat. If it is not in the manual, there is a special page the guy that sells it to
you can give you telling you how to do it. It does not require any rewiring or
clipping just pushing the buttons in the right order. It will also pick up AM
in the 118mz area. This lets you listen to air traffic controllers and airplanes.
It can also pick up the National Weather service in the 155 to 164 range also.
Someone also told me of a mod that opens the 440 side of the radio into the
900mhz range as well, this skips the cell phone freq.
Yes it is a good radio and it has a lot of mods to make it more fun to use.
I also thought it had a great price for what you got and needed. Most dual band
rigs have way more features than I would ever need or want and they charge
for these non-used features like remote control. This radio has it, but it is an
option you pay extra for.
I think you should get it.
73's and have a good day.

Don't put much money into them. They both have a custom IC in the PLL that is prone to fail. I know of several that have done this. Icom doesn't have a replacement for it anymore. So when it fails you might as well throw the radio away.

I would also like to have a IC-45A, but wouldn't be willing to put more that $100 into one.

Hope this helps out with your decision.

Dan

> Why the heck would my 6146 plates be glowing red?

My HW-101 had a situation which turned out to be bent rotor/stator plates in the "Final-Tune" variable cap. The plates were shorting when I would turn the "Final-Tune" knob. I could adjust the resting cathode current to 50ma but got no output at all. I never left the rig in "Transmit" long enough to see if the finals would glow though.

Let us know what you find.
Mark

4279. Question on Packet Radio with a Mac

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-11 00:00:00 UTC
From: srithir@cray.com
Message-ID: <srithir.842458768@hickory505>
Source record: 194336

Hello,

I have a Mac 6214CD and a HTX-202 - looks like I'm the only
one in the world with this combination :(

I need some help on which TNC and software to acquire to get started ?

I surfed the web all day yesterday, received replies
to an earlier posting on this newsgroup and figured that PERHAPS
the three options I have are

1. AEA PK-12 + MACRATT
2. KPC-3 + HostMaster for MAC
3. BayPac BP-2 + SoftKiss 1.8 + Savant 1.0.2

and of course some soldering (which I was hoping to avoid).
But the more I look around it seems that connecting the TNC
to my HTX-202 would definitely require it.

Are these observations right ?

I was also told that the HTX-202 is very much like some old
ICOMs so the cables from MFJ to connect the TNC to a HTX-202
should work just fine - is that correct ?

Options 1 and 2 seem quite pricey unless I find someone to
sell me used items for less. What are your thoughts about the
3rd option.

Can you suggest some other ways to get started ? I'm feeling
miserable at this point that I bought a MAC ! Had to give in to my
wife's request.

Thanks a lot,
Sincerely hope you can address my problems....
Srikanth, KB0TRX

I'm new to the hobby my self. But, I have purchased to Yaesu
products, the FT-50R and the FT-8000R. I am very pleased with both.
The FT-8000R has many usable features, I have read the manual very
carefully and still keep running across new things. If I had to
purchase another rig, I would buy another FT-8000R. I haven't had any
problems in the 4 weeks that I have had the rig.

4286. Troubleshooting IC-2AT?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-11 00:00:00 UTC
From: Marty Gulseth <marty_gulseth@hp.com>
Message-ID: <32370E78.254B@hp.com>
Source record: 194343

Hello All,

I posted this query before, with no response. I'll try a different title this time!

In a moment of Field Day haste, I connected my IC-2AT to the 12VDC bus with polarity reversed.
This indiscretion took out my homebrew 12VDC "converter", and got to the radio itself. (Yeah, I
know, shoulda put in a reverse protection diode, and shoulda just flat been more careful!)

Before I spend a lot of time troubleshooting the radio: Has anyone else dealt with this? Any
insight how much damage may have been done? I have the service manual, and test equipment, and I
am not exactly a rookie at this, but I do want to scope the job before going in if possible.

Thanks to all!

Sounds like the set is WAY out of neutralization. Look closely also for
a bad plate choke (I have one of these also if you need it). Look for
bad coupling and bypass caps that might lead to a feedback path, look
for bad resistors, broken wires, etc. It's definitely self-exciting,
and the cause could be a bit tricky to find (but not impossible).

?????
>
> SM0BKZ
Maude ...

I use one and it works great. Collins made on of these
devices back in the '30's. I have sold quiet a few of these to
my friends by demonstrating its capabilities. I WORKS !!! The
ability to cancell noise depends on the size and proximity of
the noise antenna. This antenna must be carefully setup. It
took me 2 weeks to get it right here. The only side effect is
that S9+ signals are also phased down to size. The benefits
are reducing noise before it has a chance to get into your
receiver and do nasty things with your AGC. (driving weak
signals down)

From: Gary Mackey <mackey@tir.com>
Message-ID: <32379CA2.1250@tir.com>
Source record: 194358

Can someone tell me if installing a FTS-22 CTCSS decode board into my Yaesu FT-8000r will take over the function of both encoding and decoding the CTCSS in my radio ? The CTCSS encode tone on my FT-8000r (without the board) is to loud when enabled, and almost sounds like a power supply hum. I was told if I installed the FTS-22 board, I would be able to adjust the encode deviation level with VR1 on the newly installed board. Without the FTS-22 the CTCSS encode level is fixed, with no adjustment unless you replace a component.

Source record: 194362

Dan
You have severak choices.
1) as another user said buy an IO card that will allow you to
put more serial ports in the PC, but be sure that the card you buy will
allow you to set up com 3-what ever on non standard IRQ's this way you
can use all at once!

2) If you plan your system you can put the modem on Com 1 and the Mouse
on COM2 then put the ADMS on com 3... This will work all the time as
long as you "DON'T TRY TO USE THE MODEM AND PROGRAMING KIT AT THE SAME
TIME". Under normal serial configuration COM1 and COM3 share an IRQ
and COM 2 and 4 share an IRQ, so as long as you dont try and use 1 and 3
or 2 and 4 at the same time you can have all devices configured.

3) There is some talk and discussion, and I have even had it work some
times, with WIN95 where if the resource of 1 and 3 or 2/4 are used
together win'95 sometimes will not let them confilict, but is is
dangerious as it does not always work!

If you need more info or help, email me.

Why don't you use a monopulse feed in the receiver antenna, just like a
radar tracker..

Yes, Production has begun on R-8500's, and they should be available for distribution "very soon". Pricing (in U.S.) has not been announced.

AS you say, these radios were made only for the domestic Japanese market, and never imported into the U.S. ... the existance of any capability for modification for U.S. use is very very doubtful!

Very 73, and good luck!

Greetings:

I also am a Mac/packet peson. I use Saviant 1.0.2, and Soft Kiss 1.9.1 wit the Poor Mans Packet Tnc that was in the 73 magazine several years ago. I also use a 1270C with the MFJ software package. I run a 6290CD and

several different radios, ie IC27H, IC211, RS 202, Regency XLH250B. I also have an SE that I am dedicating to packet so I can surf the net and packet also.

If you are useing the 202 use an external antenna or you will experence a lot of RF fron the computer, or move the radio away fron the computer. I found it works better just to use an external power supply and external antenna. I have used the SE, Savient, SoftKiss, and PMP with the regency radio when I was in Dayton for the Hamvention and it worked very well. The next thing I am going to try is a 12 volt supply for the SE for portability.

If I can be of any other assistance please drop me an E-Mail.

4312. Help on Icom IC-215 and crystals

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-11 00:00:00 UTC
From: Chris Davis <cdavis@ptel.net>
Message-ID: <01bb9f87$13bee6e0$055c09ce@chris>
Source record: 194454

I just got an Icom IC-215 at a swapfest. It's labeled a 'Handy Transceiver'. It's quite bulky, which makes it somewhat 'unhandy' in my opinion. But it works and I'd like to get a few more sets of crystals for some local repeaters.

Here's the rub: I don't know anything about crystals. Do I have to buy very specific crystals for this, or are they all the same? Where do I buy crystals? How much do they cost? I've at least figured out there is a 'transmit' and a 'receive' crystal for each channel, so I think I'm on the right track!

BTW, does anyone have any info on this unit, like it's average age, power output, etc?

I just received the September issue of CQ HAM RADIO, the Japanese ham magazine that is a virtual catalog of ham gear. The new equipment ads typically run in here 4 to 6 months before QST or the stateside magazines pick up the product --

there is NO SIGN of such a rig (and for what it's worth, Icom uses different model numbers on many products in JA versus USA) even after searching descriptions, etc.

While this could be true, it has yet to hit the magazines. From experience with the launch of the ICOM -775DX2, (JA model of the ICOM 775DSP), the magazines were running ads MONTHS before product availability -- just like they did with the IC706 in the USA.

>well as an auto-patch. We would like to continue to offer reverse auto-patch,
>DVR, and voice mail as well. Thanks for your comments.
Link Comm's RLC-2, RLC-3, will do all these things, and are prime
candidates. The RLC-4 lacks synthesized voice, the RLC-5 has a short
DVR, so voice mail isn't implemented. The RLC-Club controller does
all the above, but only has 2 radio ports. Depending on how you
employ linking this may not be usable.

S-Com's 7k is a fine controller (although I prefer my RLC-2 to the
7k's I maintain for the local club) but lacks pre-packaged software
for DVR. Using macros, and the hardware TTL lines one could make a
DVR with multiple tracks work, but it isn't as easy nor as elegant as
an RLC-2 or 3 with their large DVR- which is all controlled in
software from the get-go.

The only other major difference to the scenario you give is that the
Scom 7k has 1 main repeater port, one full-duplex linking port
(doesn't run an independent repeater very well - mostly used as a link
to port 1) and a third receiver port (usually a control RX).
LInk's RLC-2 offers 3 full duplex ports, and they can be configured as
independent repeaters, links or whatever, plus a fourth receiver for
control RX use. RLC-3 (I think) has 4 ports to begin with, but it's
modular design supports up to 8 total ports (analog I/O, autopatch
each consume a port).

>KC7FVX Lance

Thanks for your suggestions, Lance

I've been told that the radio sounds "off frequency" but that was
checked by a friend of mine. we also did an audio check simply with
two radios. With the speaker mic, I couldn't get within two feet
without my signal breaking up. With the internal mic at a couple of
inches I was still able to cause the same problem without speaking
unreasonably loud. it was louder than normal, but about the same as
you would speak in an environment with lots of background noise. In
fact, the first time it showed up witht the internal mic, I was in a
large crowd after a car race.

Thanks again!

Kevin

David,

Thank you for your help. I hope you can clear something up for me.
The page you gave the address for said the adjustment should be
"counter-clockwise" while you suggest "clockwise." Before I open the
radio up and try this, since I'm sure I know what pot you are talking
about, which is it, in your opinion?

Thanks,

Kevin

Yes, I'm pretty sure it went down as I turned it clockwise. The way I did
it was to tune my scanner to a simplex channel and listen while I talked
into the mic. I could hear the gain go down as I adjusted it (and also
the squeal go up as I adjusted it the wrong way! You can adjust it with
the unit open as long as you have external power supplied. If you don't
have a scanner, just ask a friend with a HT to stp by while you adjust it.

Hello,

Could somebody advice me if there is any handheld transceiver/scanner
nearby:

1. Tx/Rx (AM) on Air Band (118-137MHz)
2. Tx/Rx on VHF (NFM) 156-225 MHz (ground comm.)
should be on the 168.xxx MHz
3. Dual fx receiver (it is not requirement)
4. Wide band VHF/UHF receiver - scanner

However, I don't care about HF (SSB...) but I want a good performance
on the VHF/UHF receiving (app.100-500 MHz AM/NFM) and above.

Thank you so much for the help and any information.

Does anyone know good ways to determine the output impedance
of a transmitter? I'd like to match a 50 ohm antenna to a
transmitter of unknown output impedance. The transmitter is
of fairly low power (1mW or thereabouts).

FWIW, the radio is a National Semiconductor "AirShare" NBFM data
module on 902-928 MHz, that I'd like to convert to ham use. I'd like
to attach an external antenna, to replace the internal microstrip
antenna. If anyone has info on these boxes (HSC sold them a while
back, and they also appeared at a flea markets), please drop me a
line.

My best idea so far is to experiment with an LC matching network
and listen to the TX output on a remote receiver for best signal.

73,

Dave WB9TMF

It was probably just an error in shipment. I've always found MFJ's
products to be of good quality.
Butch N2YMJ

Well to add a comment. MFJ does have some problems sometimes in
communications within their own offices. When I wanted to order one of
their MFJ1171 (Commodore Digicom Modems) their 800 opr at TECH office kept
telling me there was nothing wrong with the modems and they had like 200
sitting on the shelf collecting dust. Their 800 opr at SALES kept
insisting at first that they had "none". Then when confronted him with
the words of the TECH opr he said that was true but there was something
wrong with the modems thats why they quit selling them and were instructed
to just keep them in the warehouse. Another call to the TECH people and
they completely refuted that and said they sold them for years and no
problems whatever. One more call back to Sales and told them to ship
me one regardless. The guy was nonplussed, and said "you mean you want
us to ship you one even though we warned you something is wrong with
them. I replied exactly that "ship it". They did finally after a 2
month delay of phone calls after calls etc and the modem finally was
received and worked perfectly ever since. So they obviously have an
in house problem in comms between each other, but as to their products, I
would say FB!.

I need help. I want to hook up an osicilliscope to the output of my 100 watt transciever(for test purposes). The literature i have says I need to use an attenuator between the coax output of the transmitter and the scope. My question is : If I hook a 50 ohm dummy load in parrelel through a coax T, Is that the same thing? Or do I still need to attenuate the signal to the scope? If so is there a cheap way to do this? Is an attenuator a 50 ohm resistor in series to the scope and if so can I us a low wattage resistor to do this?Thanks in advance. David Panek KE4MLV

ICOM rep at the Shelby, NC hamfest 9/1 said it still hasn't passed the FCC's testing for sales in USA - also said FCC is concerned that it might be easily modified to pass the cellular frequencies and ICOM is not allowed to announce pricing in US until it passes all tests.

He had the sales literature, though.

Weird that this big radio (obviously not meant to be an under-dash mobile scanner) works only from 12V! You have to use an external converter to run it from 120AC.

I would use a return loss bridge, such as the one made and sold by Eagle in Wichita, KS (also sold by IFR with their name on it) or something similar. Used in conjuction with a service monitor with spectrum analyzer/tracking generator, you can sweep the output of the unknown tx. At 1 mw it would be no problem to do and you can see *exactly* what you have. The return loss bridge that I refer to can handle about 1 watt. I recently did this on some brand new and EXPENSIVE test gear and found that the output that was supposed to be 50 ohms and "calibrated" was nowhere near 50 ohms (in fact, 6:1 SWR), and couldn't be calibrated! They are now re-designing.

Transmit thru a Bird into a 50ohm dummy load. See what your ref power is.
If nil, then you've got a 50ohm system. If Hi REF, you can calculate what
the output impedence is!

But Jay, you won't ever get any reflections from that 50ohm dummy load
through a 50ohm Bird wattmeter no matter what the source impedance is.

Buy yourself an A-B switchbox and use it on the port you presently use
for the modem to switch between the modem and the ADMS programming cable.

I have the following gear I would like to swap...

1. Drake TR4C transceiver, MS4, AC4, org. manual. Excellent cond.
2. Drake R4A receiver, MS4, org. manual & 2 crystals (one WWV 10mhz)
Excellent condition - super clean.
3. Ten Tech Century 21 transceiver. Excellent cond.
4. Hallicrafters S-120 gen. cov. receiver. Works but needs alignment.
5. MFj 259 (dual metered) SWR analyzer. Used once. Excellent cond.
6. Astron RS50M (metered) 50 amp power supply. Excellent cond.

Would consider a trade towards a 486 or above complete computer system,
HF (digital) transceiver (old or new) or ... ?

If interested, reply by E-mail.

Thanks....John

4375. Proprietary XCVR CPU Chips

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-13 00:00:00 UTC
From: Steve Westfall <steve.westfall@aquila.com>
Message-ID: <323A2092.632D@aquila.com>
Source record: 194175

Are there any HF transceivers on the market that use standard Intel cpu chips instead of the manufacturer's own proprietary chip? I currently own an Icom IC-720A that I purchased new in 1981. An Icom repairman informed me a few years ago that whenever my cpu chip gives up the ghost, that will be it for my transceiver because Icom no longer makes the cpu chip. My rig would become worthless unless I could cannibalize one from another IC-720A. But if it used, say, an Intel 8088 or 8086, that would still be available.

I would think that there would be enough demand to support the manufacture of rigs that use standard chips, with programming stored in firmware static ROM. Does such a bird exist? I would like to find out before investing in a shiny new rig!

Please respond via email, as I do not read this newsgroup on a regular basis.

Thanks and 73s,

Steve Westfall

Source record: 194176

NOW YOU CAN HAVE THEM TOO!

Discrete TTL/CMOS technology is old fashioned and cost you lots in terms of space and power.

The software and equipment needed to program your own PAL/GAL chips can cost in the thousands.

PAL/GAL technology can reduce chip count up to 90% and in many cases are faster than TTL/CMOS technology.

This saves you time, money and board space.

If you can describe it and it can be programmed, We can program it.

Custom logic chips are a lot cheaper than you think.

We specialize in providing quality fast turnaround to individuals, students, hobbiests, companys -- whatever the situation.

Hi Jerry ... and all ...

The fact that the FCC has not yet type accepted the R-8500 does not stop Icom (in Japan) from producing them for distribution elsewhere in the world ... and the original question came from Europe.

Icom (Japan) is indeed producing radios, but they cannot be imported into the U.S. for sale to the general public at this time, due to non-type-acceptance.

This is not the first of the "base station" receivers to run off an external 12 VDC source ... Uniden has been doing it for years ... several of the current Drake short wave receivers do it ... the Yaesu FRG-9600 and FRG-100B do it ... actually, it's quite practical on the part of the manufacturers, since they produce one radio, and "customize" it to the market (i.e., supply voltage), rather than building one model for Australia, one for the U.S., one for Europe ... and so on ... look at the vast variety of mains plugs that exist for 115 or 230 volts around the world, and imagine how many versions of the radio would have to be built if they had to put a different mains plug on each version!

Hang in there gang ... the R8500 is on its way ... utilize patience!

Very 73 to all,

"Squeak" Porray, AD7K
Manager, Amateur Electronic Supply/Las Vegas

Yes, This is a more positive role for HF
people. The HF bands will soon be recovering
from the Southern winter so those signals
from the antipodies will be coming through.
Take a look for the home-stations, mobiles.
During the third weekend of October is JOTA,
where amateur radio combines with the
scouting troops and camps, so another
opportunity for some pleasant operations,
with the Worlds Youth - in scouting.
On one occassion I QSO'ed to Tatum Park,
near Mancester, UK. during the period. 73

I am looking at buying the Alinco DR 610T or The Alinco DR 605T. Which is better. I was told that the 610 had a lot more bells and whistles but that the 605 had better audio. I am wanting to use it for voice as well as packet. I would also like to know how it would stand up to hard use. Or if you had a better radio I would like to also know what it would be.

This was a real small radio in its day is was indeed quite handy.

>BTW, does anyone have any info on this unit, like it's average age, power
>output, etc?

Its an antique the age of this radio is about 25 years old, can not remember the output power, I think 3 watts. ICOM America is no longer supporting this radio, all you can get is a copy of the instruction manual through their parts dept.

Does anyone know how I can repair a piece of flex circuit in a HT radio? My flex with 21 conductors broken and yaesu wants $400 for a new flex (the radio didn't cost that much used). They will not sell me the flex except to purchase connected modules that come with it. Thanks. Any advice would be welcome.

The old heathkit cantenna had a diagram to setup this. I had one but don't remember how it was setup. Maybe someone has a heathkit cantenna dummy load diagram and can tell you. The 50 ohm load absorbed the power but there was a few small parts which allowed a wattmeter or oscope to be hooked up to sample the signal.

Oh, no!! They've woken Cecil!! Run for th hills!!

Of course, Cecil is correct. Also, measuring S22 (as someone else
suggested) tells you very little for the same reason - many amplifiers
designed to drive 50 ohm loads do not present a 50 ohm load at the
output.

Given that the manufacturer of the 900MHz module is known, the
easiest way to find out what the intended load is would be to call
the manufacturer.

>They are now re-designing.

The return loss of a transmitter intended to drive a 50 ohm load
is often very low - a transmitter can be designed to drive a 50 ohm
load and not present a 50 ohm load. A signal generator that
is intended for testing in a 50 ohm should present a 50 ohm
load, but a transmitter is a different story.

I can turn most any source into a 50 ohm source with a resistive
pad, by the way...

I'll defer to your experience on this one, but it seems odd. The rigs that
are imported in to the US all seem to have the ability to broaden the Tx/Rx
range significantly, beyond any amateur allocation. Wouldn't the home
market radios be designed similarly?

You probably don't care what the output impedance is. What you want
to
know is the impedance into which the output stage delivers maximum
output consistent with low spurious output. Then you build a
network
to convert your 50 ohm load to this impedance. Classical theory
would lead you to the assumption of a conjugate match, but these things
ain't at all linear. And your 50 ohm coax likely doesn't present
anywhere
near a 50 ohm load anyway.

Suggest you hang a coax on the output. If it does what you want, ship
it. Try moving the tap point along the stripline for maximum smoke.

Source record: 194285

My local repeater club purchased an old GE PRogrees Line receiver to a provide 6M Skywarn backbone audio feed into the repeater. The receiver looks very similar to a model ER-39-C (4ER39C68-85) for which we have a schematic. Unfortunately the receiver must not be that model as the boards and wiring do not agree with the documentation.

The only numbers we can obtain are from the PL board and the AUDIO, SQ, & IF board. The numbers found there are:

PL19D40237G4 REV (ink stamped on board assy)

19C303450 R4 (on PC foil pattern)

We would appreciate any service information any readers might have.

Reply here or send E-mail to YoumansB@worldnet.att.net

>Getting into packet, which should I buy for the long haul??

>Phil ki0dm

I had a KPC-3, then sold it and bought a KAM plus. Both are fine units. The KPC-3 doesn't do any HF modes, so if you think you'll ever feel the itch for HF packet, rtty, pactor, etc... then go with the KAM.

For VHF use, the only difference that I've found is that the KAM Plus comes standard with 128K of RAM, and I think the KPC-3 was 32K. That leaves a lot more room for mailbox space and other uses. Honestly though, most people don't use all of the 32K that's in the KPC-3, so don't choose the KAM based only on memory.

One other difference is that the KPC-3 is good for portable use. It will run for more than a day on a 9V battery, and is VERY small. The KAM uses 12VDC at around 100-200ma, and is bigger and heavier.

Good luck!

>for the modem to switch between the modem and the ADMS programming cable.
>
>-- Jim, KC5OA

The A-B switchbox is probably the best solution for this case but I wanted to throw in another option. I had a similar need, but I had three items that must be running at all times (mouse, modem, battery-UPS control). I swapped my mouse out with a *bus* mouse. These mice are available from a few manufacturers, Microsoft comes to mind. The mouse includes a bus controller card and a mouse designed to work with it. Don't get this confused with a PS/2 mouse, they are completely different (different connectors). Although a PS/2 mouse may be an option for you if your computer mboard supports such a thing (I have never seen a stand-alone ps/2 mouse port expansion board).

Hope this helps

I was recently in the market for these same radios and decided on the FT-50 when I went over to Texas Towers and saw the Icom IC-T7A HT. It only supports xmit/recv on one band at a time, but that's all I really needed in an HT. It is a nice size (the FT-50 is kind of chunky if you ask me) and it is light weight. It also shares accessories with other Icom models which makes owning multiple radios less painfull.

The radio is limited to 4W output, though. I belived both radios you mentioned are capable of 5W.

My thoughts

4415. Looking for ICOM 701 mods. HELP?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-13 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <51brb8$7h4@coranto.ucs.mun.ca>
Source record: 194292

I am looking for some ICOM IC-701 mods like extended transmit/receive,
receiver improvements, etc. I was told the several magazines had afew
articles on mods or improvements on this transceiver.

Can anyone tell me what dates and magazines it would be in?

Would anyone have photocopies of these mods?

Does anyone have the CD-ROM version of the QST magazine that has a searchable
index for all issues and could search for ICOM 701.

The only article I know of on the ICOM IC-701 is a review in april 1979
QST. Any other reviews?

Thanks to the people that already replied to me and gave me the date
for the QST review.

>
>-- George
> N4EOJ
> gentz101@cris.com

I bought and use the FT900. Here are my (not very detailed) comments.

The receiver is excellent. Very sensitive, and with the optional SSB and
CW filter (both of which are "musts") the rig is quite selective. The
transmitter leaves nothing to be desired either; it is very good.

The overall quality of construction is better than any rig I've ever owned.
The radio is mounted in a heavy-duty cabinet, with an overbuilt heat sink.
Although the radio isn't rated to mil-spec, I'll bet it could be.

The radio is not a good Pactor rig. It can only receive digital on SSB if you
use the data connectors on the back. This means that the CW filter is not
usable for Pactor/Amtor. This is the only drawback of the rig. It can be
mitigated by buying a good outboard DSP filter such as the Timewave DSP59+
or others in that class. The rig does not have true FSK.

The remote front end is a pain to do and undo. You have to use these
teeny tiny little screws in order to mount the head remotely. If you re-mount
the head to the chassis, i.e. for desktop use, nothing on earth is easier than
to lose these easy-to-lose parts. This is not a snap-on operation, although
it is very easy to do with a tiny phillips head jewelers-type screwdriver.

The antenna tuner is very gutsy. It will match antennas with 5-1 swrs,
which my Kenwood TS850 would not tune. This is a VERY nice amenity
to have. It is a must. Very nice for mobile and maritime mobile operations,
where often your antenna ground is such that you can't get the SWR to be
very good.

The radio's controls are almost all actual knobs, with few menus to fool with.
This is critical in my opinion, because you don't have to memorize
screwy key sequences the way you do with the comparable Kenwood and
ICOM products. You really don't need to look at the manual much, the way
you do with other modern small HF mobile radios.

Overall, the radio is excellent. It's strong suit is the quality of construction,
and the fact that as far as portable rigs go, it has fewer compromises.
It works very well, with no surprises.

Gentlemen, gentlemen! The source impedance has no effect on the reflected power or SWR! It's determined only by the load impedance and characteristic impedance of the transmission line. (What you _measure_ is also a function of the design impedance of the meter.)

The Heath (wish they were still around!) Cantenna had a "sampled" port which was connected to an RCA (phono)
jack. This was connected to the 50-ohm line through a series 4.7 pf (if I remember correctly) capacitor to
"sample" the line. Of course, the amount of energy coupled to this port is dependant on the frequency - more
of coupled at higher frequencies. You can also use a small loop of a few turns just "stuffed inside" the small
bow mounted on top of the Cantenna and connect this to the 'scope. Good luck.

4425. Odd Yaesu battery pricing?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-13 00:00:00 UTC
From: morris@unc.edu
Message-ID: <51c7mm$10n@newz.oit.unc.edu>
Source record: 194302

I was looking at getting an additional battery for my FT-50R. Looking at one catalog (Communication HQ in Wilmington) they listed the following:

FNB-41 - 9.6V, 600mah battery $58.95
FNB-42 - 9.6V, 1100mah battery $62.95

Why so little difference in cost? The second item should last almost twice as long as the first item, right? I did verify the prices over the phone. Anyone have any insight as to why this is?

Calculate the voltage across the 50 ohm load for a 100 watt output...about
71 volts. Then see if your scope will give you a reasonable presentation at
100 volts peak or so. Also, determine the frequency response of the scope
to see if the vertical stages will pass the frequency in question without too
much roll-off. If so, then put your probe at the tee and try it out. A 10x
probe might also help. Some of the older scopes had direct connections to the
vertical plates thus bypaasing any input attenuator/amplifier problems.

Be careful with this advice. Remember that the input rating on your scope
is probably specified at some DC + Peak AC voltage at a frequency
near zero...like 60 hz. It derates to nothing as the frequency goes up.
200V p-p at 30 MHz. will probably hurt the input attenuator
or amplifier of a solid state scope.
miker

That will do fine. If you remember that P = V^2/R then your 100
watts into the 50 ohm dummy load will show about 70 volts rms across
the load, say about 200 volts peak to peak for the unmodulated
carrier.

It probably went something like this:
Yaesu market research determined that the most you'd pay for a
replacement battery
was $62.95. That's the price of the big one. (Doesn't matter that
it probably costs them $5 to make.)

Now, the only reason anyone would want a lower capacity battery is that
it is lighter/smaller. That's a benefit to you. Be glad the marketing
guy didn't win the argument or that benefit would have cost you more.

Don't think of it as a good deal on the big one. You're being ripped
for the small one (actually both) because you don't have an optional
source.

> John, KB2YJH

Perfect timing John. I just changed my battery last week!
It is a Sanyo CR 2032, Marked CR 2032 right on battery. Other marks show
3V. Mn O2 Li Cell. The new battery measuered 3.32V when out of circuit.
The removed old battery measured 2.81V out of circuit. I use Ungar iron
but did not ground the tip. It was fairly Humid day. The Digi-Key catalog
800-344-4539, shows Panasonic Lithium batteries. They have a Panasonic
part # BR 2032-1HF, Digi-Key #P196-ND. IT may be same battery. About
$3.00
I programmed rig. Removed power for 10 seconds, repowered. Memory
holding.

I paid $15.00 plus $5.00 shipping plus NY sales tax with Eastern
Transistor Parts in Melville,NY. These guys are who Kenwood suggests
as parts source. They mailed it in an envelope for $.055. I would now try
Digi-Key or Mouser. $21.00 for that batt is a rip!!

The fact is, Jim, that your ten year old radio is likely to be a whole lot better for 9600bd than most new "9600bd ready" radios.

Rod.

>too much amperage?
> - Ken Hoover
>

Stay away from this one, Ken. Switching power supplies do not track instantaneous current surges well, especially relatively large ones. A typical PC supply may be capable of 9 Amps max at 12 vdc. When keying up an HT on high power to transmit, you would be increasing the +12 load by almost 20%. Forget about mobile-type rigs, they'd kill the supply instantly on high(er) power!

To power an HT at home, I recommend a supply capable of at least four amps continuous. For a mobile-type rig (50W), the minumum current rating of the supply should be 20A continuous. I recommend a 35A unit if the radio is going to have a 25% or higher transmit-to-receive duty cycle.

PLEASE NOTE:

Th FNB-41 is designed to be used on the FT-50R. The FNB-42 Battery does not have any belt clip provisions since it is so big. The FNB-42 was designed to be used with the PA-17 battery extender which includes the belt clip.

A better choice is the new Yaesu FNB-V47 battery. It's specs are 7.2V at 1100 mAh. It provides 3.5 to 4 watts output with long life operation. It also includes the commercial type of heavy duty belt clip which is real cool......

Is this the WEN soldering gun which is shaped like a revolver?
I had one and, unlike the previous poster, know what you're going through.

This gun uses a special tip, sealed and spot welded to a tube.
The entire tube/tip assembly is replaced as a unit.
I've not seen them for sale in years. However, WEN is still in business
making other products (electric hedge clippers/chain saws/portable drills,
etc.) maybe they still stock those tips. Try contacting them - I don't
have their address.

A Drake R-8A is a outstanding receiver,but I would consider a Drake
SW8,which is not only cheeper but a better outstanding receiver and
newer to the R-8A.The Sw8 has been modified and an extremly sensitive
reeiver.I own one and quite pleased with it.

4453. Info on Yaesu FT-3000M?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-14 00:00:00 UTC
From: Steve Turner <stevet@mail.utexas.edu>
Message-ID: <323A5E14.1D1DF346@mail.utexas.edu>
Source record: 194195

Does anyone have good or bad experiences with the
Yaesu FT-3000M dual-band mobile (70 watt). Is this
a new model? How does it stack up against the new
FT-8000?

From the data sheets the FT-3000 seems to have more
power (70w vs 50) and more features (DCS, ARTS,
alpha display, spectrum scope, soft keys, twin fans,
full duplex) than the new FT-8000, for less money.

Am I missing something?

I have a Yeasu FTV-250 two meter transverter for sale. The unit has 10W output, metering of drive level and power out, variable RF gain, and covers 144-148 with a 28-30 IF. Also has provision for running on 12VDC or 117VAC with built-in power supply. It is in very good condition and I also have the manual for it.

I am asking $175 or will trade for either a MMT 144/28 or a Uniden HR-2510/2600.

I could use this transverter, but really want something smaller for my portable operations.

Source record: 194201

I have 5 Harmon 4D25C VHF-FM transmitter-receivers for sale. These were designed for 148-174 MHz, but work fine at 2m by plugging in the right crystal and tweaking. They are 12 channel radios, all solid state, 40W output (minimum). The transmitter and the receiver are separate plug-in modules. Several of these have been used on packet, including digipeater service. They also make nice HT amplifier conversions, as the transmitter amp needs only 100 mW input for 40 to 50 Watts out. Also, most of the stages in the transmitter and receiver modules are plug-in mini modules, completely shielded and super quick to replace if one should fail (a rare event).

I have some documentation available on these. I would prefer to sell all 5 to one person, with all the documentation (this would save a lot of copying).

I am asking $30 each plus shipping (they are not terribly heavy), or $100 plus shipping for all 5 of them.

I had the tilt over device from Hy-Gain and it worked really well. I
was able to raise and lower the tower by myself. It is kinda expensive,
but, if you raise and lower your tower occasionally, it may be worth it.
You might see if you can locate one near you to borrow, or buy. I sold
mine when I took the tower down for moving out of the area.
Good luck de Sam, AB4N Culpeper, Virginia

4462. FM Mobil (triband) opinions solicited

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-14 00:00:00 UTC
From: richgr@netcom.com
Message-ID: <richgrDxqu2B.Bux@netcom.com>
Source record: 194204

My FM mobil was just ripped off, and I am seeking opinions on what to
replace it with. Here are the features I am looking for:

* Tri-band; 2m, 440, 1296
(1296 would be nice but I could live without it)
* Control head can seperate from radio, so radio can be trunk mounted
* High audio o/p level (I drive a convertible)
(Or I can use a power speaker)
* 20-30 watts or more of RF power (probably less on 1296)
* PL encoder (decoder would be a desireable plus)
* Touch-tone ability (probably part of mike)

I am leaning toward a Kenwood TM-942a. A friend said that if I got a
TM-742a plus the optional 1296 unit ($260 more than the 942a) I would
have some additional features that he didn't remember the details on.

Anybody have pro/con options on these radios? Other radios?

I operated an ART-13 after homebrewing the necessary 28V 10A, 400V 1/2 A and 1500V 300 mA power supplies and the control circuitry until 1971 when I left for Rwanda (where I operated 9X5PT till 1976). Those motor operated 2 inch diameter tuning knobs were a sight to behold! The final (813) and modulator (811s) tubes could be seen glowing brightly (50W filament, bare tungsten) through the numerous and indispensable ventilation holes.... But I'm sure I must have interfered with a lot of TVs in town, the frequency control had a lot of backlash and drifted (the VFO was a 20W plate dissipation transmitting tube) and changing frequency took the best part of a minute as the main tuning knob had to turn 40 turns even if the mechanical memory fell in early.... Even then AM was quite outdated, and the buzz from my hand-wound 10 A filter choke was heard thru the original (not-noise cancelling) microphone....

I finally sold both of my units, and I doubt very much unit #2 (original, unmodified) was even put on the air as the guy never claimed his copy of the docs (about 400 pages, and I didn't clone all of it)...

Bad idea. If you use any type of silicone or teflon (pure like TefRawn, not mixed with hydrocarbons like the cheapo brands) spray it into some small container and let the vehicle evaporate first- then apply resulting silicone or Teflon residue to the gears using a brush. The 1,1,1 TCE and amyl acetate (banana smell) vehicles will deteriorate the nylon parts if you don't evaporate them away first.

Also, I understand that sever cases of sticking are due to nylon absorbing moisture over the years and enlarging, so that the only cure is to sand off the surfaces using progressively finer grades of emory paper until they fit again.

I own both of these radios. If you don't want to scan, the FT-51R is the better overall radio, hand down. There are more options (i.e. in car mount that works, BNC antenna connector, fewer bugs, easier to use, better display, 3rd party batteries). I have not been happy with the FT-50R vs the FT-51R at this point. Maybe that will change with more time. I guess the clincher was whan the windows machine I was using with ADMS software crashed and hosed the radio settings giving my TX/RX a limited range. While this was not hard to fix, on the FT51R the radio can be brought back by itself.The 50R required connecting back to a PC and sending a new template.The 50R keypad was not enough. There are also a few anoying bugs in the 50R. You may ask why I bought the 50R if I already owned the 51R? I bought because I wanted the wide scan feature of the 50R. I was tired of carrying a scanner and a radio. For more 50R info go to:

http://members.gnn.com/hca/ft50

This is the all around best 50R info site. It also has some doc's that fully list the issues with the 50R.

4474. FT767 2M mod

Mike Snowden (Pmikes@fishnet.net) wrote:
: Hello Mary. I have a newer FT 736. On 6 it should put out 10 watts in the
: FM mode. If your not getting full pwr out, carefully check all your
: connections and the SWR. If your SWR is high, the rig automatically
: "folds" back the output pwr tp protect the rig. I found that by putting
: an SWR/PWR meter between the rig and my amp the rig would put out full
: pwr. Another trick is to trim a short piece to until you get a flat SWR
: and full pwr. Good luck..Oh Yaesu will deny any knowledge of a problem.

Trimming the coax will NOT affect the actual VSWR, although it may "fool"
the rig into thinking that it is operating into a matched load. This is
because the input impedance of the coax varies with coax length.

The reason it does not affect the VSWR is that the match between the
coax and the antenna are the only factors. You cannot do anything at
the input end of the coax that will affect the VSWR.

Bill

4480. TRADE: FT530 + accs for DR610T/DR605T

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-15 00:00:00 UTC
From: Jerry Wang <jerry.wang@csun.edu>
Message-ID: <323BAF13.5E75@csun.edu>
Source record: 194127

I have a Yaesu FT-530 dual band HT (2m/440).
Modded to 110-180 Rx 130-180 Tx
200-800 Rx 400-470 Tx
Accessories include:
W&W fast charger
Yaesu FNB-25 7.2V 600mAh battery
W&W 7.2V 600mAh battery
Diamond RH77CA antenna
AEA Hot Rod antenna
Yaesu EDC5B car cigarette adaptor power cord
Radio Shack 12V 2.5A power supply
Everything is in good working condition. The FT-530 does show some
wear, but no major dents or scratches.

I would like to trade everything listed above for an
Alinco DR-610T in good working condition.
May consider a DR-605T with accessories (power supply, antenna, etc).

If interested in this trade, please call Jerry at 818-882-0101
after 5PM PST.

> products to be of good quality.

If they have a problem, it's that their products are designed to be inexpensive; i.e. cheap. Either that, or they were severely underengineered.

I've seen several of their "300 Watt" antenna tuners that have been burned out with nothing more than barefoot 100W rigs. (Yes, they were operated properly.)

A personal experience was with the MFJ-1270 (no suffix) TNC. They used an 1/8" "earphone" connector for power. Of course, I managed to pull the plug out part way and fried the wall wart. (The 1270B model uses a proper coaxial connector.. as does mine now.)

Want more? Ask anyone that owns the data radios.

Last twice as long, and also be twice as big.

As for the minimal difference in cost, keep in mind that the cost of the raw materials make up a small fraction of the cost of these items. Manufacturing, shipping, and handling costs would be the same for both batteries.

You may want to check out the third-party battery makers; Periphex and Mr. Nicad (Yost) make good packs for less than the radio manufacturer.

A lot depends on condition. As a rough guide my two cents worth is
about as follows.

HQ-145X $100-125
SX-99 $75-100
T-150 $80-120

> stevet@mail.utexas.edu

Steve your missing a big one.
The FT-3000 is a 2 meter mobile with 70cm recieve
The FT-8000 is a 2 meter/70 CM dual band transciever.
The 8000 can recieve 2meter, 220, 440, 900 & 1,2 GHZ and transmits
2 meter & 440.

> comments/personal experiences with this unit?

Purchased my TH79AD back in Dec 95 along with charger and long life battery, and some other accessories. Was about $800-900 for all.

Did mod from Artsci book and got general coverage rcv and transmit plus questionable 300mhz rcv.

Seems to be very good rig. Does have intermod problems on general coverage freqs from pager xmtrs, but thats to be expected on freq ranges not even spec'ed by Kenwood. Could probably be eliminated with simple 152mhz (and other bands) notch filters being sold nowdays. Actually, can eliminate it by orienting ant in right direction, so D.R. can't be too bad.

300 mhz operation after mod is very iffy, containing lots of stuff from 400-500mhz range also. Probably if you added filter would end up being usable.

Older units are supposed to work on 800-900mhz band after mod, but evidently mine is too late serial for that.

Be very careful if you do the Artsci mod, as the diodes to be removed are microscopic. Find someone else with surface mount soldering cabability if you don't have a fine enough or low enough wattage (<25W) iron- or drink too much caffeine (or are one of those no-code truckers on dexedrine :) :)

Hello Isaac,
I have the Ten-Tec 1208 XVERTER I build if from the kit back in May of this year and am very pleased with it. I have worked 120 grids from my QTH here in EM74 with just the 8 watts output and a 4 element homebrew Quad at 40 ft. sence May.
Don't have anything on the MFJ.

>Unplug ur modem to use the ft50 software

Well, thats one way to do it, but a much better way would be to purchase a serial card that will give you COM3 & COM4. Then use COM3 for the ft50. You will most likely NOT be able to use the default IRQ for COM3 (IRQ4) as it will probably be in use by the mouse on COM1, so set it to another, unused IRQ such as 5 (possible conflict with sound card) or 7 (usually LPT1 but parallel printers usually don't use an IRQ so it is safe to use).

If you have an internal modem, it could be moved to COM3,IRQ5 and the ft50 used on COM2. If you have an external modem, the BIOS may be able to redefine COM2 to COM3, allowing the extra card to be COM2 for the ft50.

In any case, both the com & ft50 software have to be told what IRQ & COM to use. If either are sufficiently braindead, they may only support COM1 & COM2.

Note also that some display cards use COM4. In this case, you won't be able to use it.

4516. Yaesu FT4700RH

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-15 00:00:00 UTC
From: cawley@epix.net
Message-ID: <NEWTNews.842846215.10107.cawley@epix.net>
Source record: 194163

At the Gaithersburg Hamfest I bought the main part of a Yaesu FT-4700RH dual band mobile transceiver. Does anyone know how I might locate a manual for it or a location for new or used faceplate and mic? The seller said he tried Yaesu for the parts and was told that they're not available.

Any help would be appreciated.

From: hyochoi@bus.usc.edu
Message-ID: <51itd9$235@usc.edu>
Source record: 194074

Covers 440-512Mhz, has 196 channels (14 channels occupied by U-com board). Receives and transmits on LAPD, LASO, LACo Fire, most local PD's including Glendale, Burbank, Pasadena, Santa Monica, OC Couty PD's, Amateur band, and more.
Comes complete with 2 ultra high capacity (1200mah) batteries, a alkaline case for backup, a quick charger, a swivel clip kit, and programming cable & software.
This is THE ultimate UHF wide-coverage with more than enough channels to back it up. I've only had it for a month or two. I must part with it in order to come up with tuition money.
I paid over $1,400 + tax. I'm asking $900. I think it is a very good deal for someone who appreciates high quality commercial radio like Bendix/King.

4529. What kind of radio to by, HELP!!!!!!!!!!!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-16 00:00:00 UTC
From: stormone@ix.netcom.com
Message-ID: <51ibd8$fo@sjx-ixn6.ix.netcom.com>
Source record: 194076

I am a police officer that has found myself more and more interested in ham radios. I am sure this is because a lot of Law Enforcement Officers use hams and modify them.

I am looking for a base unit with the below features:

1.Good value, a low price for the quality, I don't want to buy a cheap radio and it only last a year, but I don't have to have BMW of hams either. So I am looking for a deal, after all, this will be my first ham radio.

2.I am looking for a radio that will be compatible with police bands. I must be a radio that can be modified to TX on police bands.

3.As wide a Rx\Tx range as possiable. I like to beable to listen and talk in many places. In addition, our local dept. Tx on 3 bands.

4.High power, I live in hilly country, as much power as I can get, I can't think of any common about that would be to much.

5.I work with computers a lot, if any can interface, this is a plus, but not to important.

6.A company with a good history.

Nowthen, with all that in mind, if anyone has any ideas please let me know. I am not interested in anything over $1000.00 I am planing on having around 1500.00 to play with but I will also need a new mobile or would like to think about a high speed scanner, you know one that scanes almost the whole spectem and picks out the freq and decodes any tones, etc.

Also, the more money I save on the radio, the more I can put into an antena.

Please send all replies to my email address: stormone@ix.netcom.com

Last, please forgive my dreadful spelling and thanks in advance for any help you can offer.

Later,
Storm

Date: 1996-09-16 00:00:00 UTC
From: neidorff@uicc.com
Message-ID: <Dxt1yH.AsE@uicc.com>
Source record: 194079

I'm looking for a 2M hand held. All I need is a dependable basic radio. I do not want something which is going to need repair, but can't think of a single unique feature I want other than dependability and durability.

I'm thinking of a basic Icom, Yaesu, or even the Radio Shack (made by Maxon?) HTX-202. I am scared of the ultra-tiny radios so am only looking at "normal" size radios.

Is anyone out there using this Radio Shack radio that is willing to give me personal comments?

Does anyone want to give me other personal comments about the Icom or Yaesu?

Can you recall any good comparative articles in the media? (QST, CQ, etc?)

Thank you very much for your reply.

I think the June or July QST had a fair runoff on a bunch of HT's, the one I really remember is the ultra tiny Standard that they reviewed. I've heard good and bad about the 202, but ultimatley it seems "worth" the money. I have an ADI-200 and I wish it had the intermod protection that the 202 has (I live in mega pager land) but then I would lose the wide receive. The only negative things I can recall about the 202 are; PLL can unlock at 5W when using the rubber duck and the TX audio dissappears when the battery gets low. If you forget the fact that it comes from Radio Shack and is butt ugly (IMHO of course) :)

Hi All,

Does anyone know of any hardware or switch-on mods for the FT-11R?

Extra coverage or would be nice.

It also doesn't seem to like strong signals and overloads easily. It
still seems to be quite sensitive but anything more than a rubber duck
on it just blows it away, any suggestions please.

Please E-Mail me of you can help with any of the above.

Cheers,

Steve.

| Looking for comments on these 2 radios, anything helpful.

Both are fine radios. Biggest differences are the size and configuration of each radio. Both scan very fast. The FT51R costs about $150 more roughly due to it's slim design, more memory capabilities, and other enhanced features. Both radios are "easily" modified. You can also configure each of these radios using their software which is a BIG plus.

Checkout Yaesu's web page at www.yaesu.com if you haven't already.

4543. Help with HQ-170

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-16 00:00:00 UTC
From: Clark Thompson <cmthomp1@facstaff.wisc.edu>
Message-ID: <323DA946.4291@facstaff.wisc.edu>
Source record: 194090

Hello all,

I recently acquired a HQ-170 "parts radio" which I decided was worth trying to fix. Both of the 3035 kHz IF transformers were badly damaged. Both had missing cores and wires form coil windings ripped out and were completely detached from the circuit.

I managed to carefully reattach all the wires, and I found suitable cores in the junk box. I could easily tell how T2 was wired (old lead remains) and reinstalled it. For T1, I could tell how it went back in to the circuit, but not which direction. In other words, I could install it one way with the six contacts in one orientation or I could install it rotated 180 degrees with the wiring in a second configuration.

I took an educated guess, and installed it so that the bottom winding of T1 couples to the top winding of T2 (I don't know whether it would be proper to refer to these as primary and secondary or not).

Well, the receiver works! And it works on all bands, so obviously the 1st converter is working. It still needs help, though. The sensitivity somewhat low and the 60 kHz IF needs alignment. The notch filter doesn't work either. My question is this: does anyone know if I installed T1 properly or not? Would the set play at all if I had installed it backwards? Could the marginal performance be attributed to having installed it backward? I don't yet have a a schematic or manual.

Any suggestions will be appreciated.

Thanks & 73,

Clark, KD9QI

Hi,
I am looking for a schematic/service manual for a Microwave
modules MMT 144/28 transverter. I recently had to sell my
primary VHF/UHF allmode and need to repair the xverter
to get back on. I would be happy to pay for reproduction
and shipping costs. Please E-mail chastain@compunet.net

Thanks, Rod. (KD0XX)

FOR SALE
Marconi Mf/hf synthesized ISB Receiver Type H2540

Technical data

Modes of operation- A1,A2,A2H,A2J,A3A,A3J,A3BA9B

Frequency Range -1.5 to 30 MHz full performance,15 KHz to 1.5MHz reduced performance

Tuning Increment -1 Hz by spin tune control or wheel switches

Frequency Display _Digital Display in 1 Hz increments

Tuning accuracy -+-0.5 Hz relative to tuned frequency

Tuing time -within 5Hz of setup frequency in 0.2 sec

Frequency stability -1 part in 10E8 per day ,less than 1 part in 10E7 over temperature range -10 C to +55 C.Long term typically 1.5 parts in 10E7 per month.

Antenna Input -Wideband input Impedance 50 ohms

Front end protection -the receiver will withstand continuous signal of 30 V emf (50 ohms)

Antenna Radiation -with antenna terminated in 50 ohms radiation is less that 10 microvolts

Noise Factor-1.5-30 MHz better than 11 dB

Image rejection-80 dB

LF Rejection 80 dB

IF Selectivity-ssb/isb (3Khz filter)300-3000 Khz -4db points
-ssb/isb (6 Khz filter)300-6000Khz -4db point
-cw/mcw/fsk passbands selected from the following
300,500,1200 Hz

Headphones -600 ohms for 10 mW output

Metering- af level,agc level and fsk tune

Power Supply 100-250 Vac 45-65 Hz

Dimension Width 19 inches,Height 8.75 inches depth 21 inches weight 55 lb

Operating temp--10 to +55C

Storage temp- -40 to +70C

Humidity -95% at 40C

Altitude -up to 4000 ft

Offers by e-mail rsingh@rmplc.co.uk

I ordered one of the remote cables from Amateur Electronic Supply. They
had it in stock and I had it in just a couple of days. That was about
a month ago. Ham Radio Outlet folks told me there were none to be had
in the USA, but I think they were misinformed.
Good luck...this is a sweet little radio (IC 706).

I have a Yaesu FT-530 dual band HT (2m/440).
Modded to 110-180 Rx 130-180 Tx
200-800 Rx 400-470 Tx

Main Features:
Dual VFO
VHF/UHF, VHF/VHF, UHF/UHF
CTCSS encode/decode
DTMF & CTCSS scanning
DTMF & CTCSS paging
38 memories in each band (72 total + 2 Call)
Cross band repeat
5 watts with 12V power source
AM receive
Automatic battery saver
Automatic power off

Accessories include:
W&W fast charger
Yaesu standard charger
Yaesu FNB-25 7.2V 600mAh battery
W&W 7.2V 600mAh battery
Diamond RH77CA antenna
AEA Hot Rod antenna
Yaesu EDC5B car cigarette adaptor power cord
Radio Shack 12V 2.5A power supply

Everything is in good working condition. The FT-530 does show some
wear, but no major dents or scratches.

$400 OBO for the whole package.
If interested in the above, please call Jerry at 818-882-0101
after 5PM PST.

Source record: 194111

I have found a source for those DC power cord plugs. The ones I've got
have 6 pins, male plastic with metal female inserts.

These plugs fit most 12VDC HF radios:
Icom 735 and alike, newer Yaesu and Alinco DX70.
Kenwood TS-120, 130, 140..430, 440, 450..850..TS50, 60, 660, 670..and alike.

Make your own power cord yourself, YOUR WAY!
Crimp or soldered, long or short, heavy gauge, purple with polka dots...

I'm offering the 6 position plug with 6 inserts for $4 each,
or a deal 3 for $10. All prices include postage in the US.

To order, kindly send a check to:

R. Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: n2cjj@ibm.net

It's a great deal if you use one rig at home, in the car and at work and
are stuck dragging one power cord all over...

I still can't believe AES and others get $30 for a power cord.

4565. MFJ-259 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-16 00:00:00 UTC
From: Jim S <Saeger@gat.com>
Message-ID: <323DB77B.2B27@gat.com>
Source record: 194112

Has anybody had the opportunity to check the accuracy of the freq. counter of the MFJ-259? The first one I had was about 33 parts per million high; the second one is about 5 ppm low. Manual says it should be 1 ppm. Local dealer says I am expecting too much... and is the gate adjustable? .. and is the span of the resistance meter adjustable? The resistance says 45 ohms at 1:1 match into my dummy load... not a big deal but seems like it could be better....

There is a "hold down three keys while you turn on the power"
type mod to give you extended receive coverage that is documented
in the user's manual.

If you want to transmit on the MARS/CAP frequencies (just above/below
the 2m band), you can send your CAP/MARS radio operators permit
to Yaesu to get that mod. I don't know if this applies in the UK.

This mod and mods for other radios are available on ftp://oak.oakland.edu.

> It also doesn't seem to like strong signals and overloads easily. It

Mine seems to have trouble with AM Air band reception. Not very
sensitive and sounds pretty garbled at times.

I've also used a roof-mounted discone to both receive and transmit
with very good results.

Hi, David,
As I remember, the 99 was bringing around $60-100 up and running, depending on cosmetics, the 145 in the $100 range, and the Knight I am guessing at $75-100 as it is similar in function to some other xmtrs that draw that price. This is based on hamfest prices in WNY region, different areas seem to have different economies when it comes to older stuff. Of course, mint rigs will draw more, inoperative or marginally operative, as well as "modified" (read mickey moused), equipment will bring less. Hope this helps.

>

Dave,

I seem to remember that there was a software setting for choosing which version of 2m coverage the FT-767GX would provide (ie. 144-146 or 144-148MHz).Its been many years since I've re-set the FT-767 2m band limits, but you might like to give the following a try.

1) Switch off the transceiver.
2) Make sure the battery back-up is switched ON (small rear panel switch)
3) Press and hold down the MCK key on the keypad (number 5 key??).
4) Turn ON the transceiver

This should now allow you to tune between 144-148MHz OK. Once re-set, this mod will remain in place unless you switch off the battery back-up, or the battery back-up (internal lithium battery) goes flat.

on
>my electric wheelchair and I've got a bad one. I've looked through
>Mouser and such, but couldn't find any.
>Thanks!!!
>Ken, N0ZEM
>kenman@iastate.edu

Howdy Ken,

Most larger electronics retailers have them, but you may
or may not live close to one. Usually they are a LOT cheaper
when purchased in bulk, but you probably only need a few. The
wheelchairs that I'm familiar with use four Anderson connectors
for each side of a connection (two black and two red each side).
Let me know how many of each you need and I'll just send you
what you need. (Give me a good mailing address).

>The European repeaters should only accept 1750Hz +- 50Hz, so You have to
>be pretty close..

An addition information here. The 1750 Hz tone burst is only sent in order
to "open" the repeater, i.e. at the begin of your transmission, if the
carrier of the repeater is not present a this time.

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

TABLE 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

TABLE 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. | Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. | Repair service for the Plectron P1 and R700 models is | offered by:

Woodson Electronics |
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. *

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

I need some information on low band GE Master II's. I would like to use one of these as a link transciever on our 440 repeater which is a UHF Master II. I have located several but they do not contain the channel elements, GE's ICOM modules. I have several of the EC/5C modules from the UHF radios, what do the low band units require for the channel elements? Also...any information on modifying the radio to 52 Mhz. would be helpful. Thanks!!!!

I am thinking about buying this radio from HRO for about $460.00 my question is as follows.

Is it really worth it, that is a lot of money. I have been told that it is the only mobile that puts out 70W and I really need that extra power but is it worth it. If I droped down to 50W could I get other types of radios that are just as good for a lot less money.

Some one out there please shed some light on this for me, I am looking for a deal, not a piece of junk. I don't mind paying to extra money for that power but is the radio worth it?

Thanks for your help in advance, please reply by e-mail,

Hi Mark,

I assume you mean the TS-820. If that's correct, then one in nice shape
is worth around $250. If it's the TS-820S (version with digital display)
then it's worth around $350.

Good luck,

Clark, KD9QI

4606. TRANSITING MESSAGES WITH TH79

```
TH-79 /// RECEPCION Y TRANSMISION DE MENSAJES
-------------------------------------------

* LA INFORMACION QUE A CONTINUACION OS MANDO NO APARECE EN EL MANUAL DE
* INSTRUCCIONES DEL TH-79.

LA FUNCION DE MENSAJERIA SOLO FUCIONA SI SE ACTIVA LA FUNCION "DTSS" O
TAMBIEN CON LA FUNCIONA DE "PAGING"-AMBOS EQUIPOS DEBEN TENER PROGRAMADOS
LOS MISMOS TONOS DTSS (000 POR EJEMPLO).

RECEPCION DE MENSAJES:
----------------------

* BASTA CON ACTIVAR EL DTSS O PAGING Y ESPERAR A QUE LA ESTACION REMOTA
NOS MANDE EL CORRESPONDIENTE MENSAJE. TENGO QUE ACLARAR QUE LOS MENSAJES
SOLO PUEDEN CONTENER 6 CARACTERES ALFANUMERICOS. CUANDO RECIBAS UN
MENSAJE APARECERA EN LA PANTALLA UN DIBUJO (HOJA CON ESQUINA PLEGADA)
Y A SU DERECHA EL MENSAJE. A SU VEZ ESCUCHARA UN BIP.

TRANSMISION DE MENSAJES:
------------------------

* SE TIENE QUE ACTIVAR EL DTSS O PAGING. EL MENSAJE DE 6 CARACTERES TIENE
QUE EMPEZAR POR EL CARACTER "#" Y ACABAR TAMBIEN POR "#", ES DECIR QUE
SI DESEAMOS MANDAR LA SERIE DE NUMEROS 123456 DEBEREMOS MANDAR #123456#
LA COSA SE COMPLICA CUANDO DESEAMOS MANDAR CARACTERES DEL ALFABETO, PUES
EL TECLADO DTMF QUE TIENE EL TRANSCEPTOR TH79 NO TIENE 25 TECLAS CON CADA
LETRA DEL ALFABETO. PARA ELLO DEBEMOS REFERIRNOS A LA TRABLA QUE ADJUNTO:

A B C <---- DECLADO DEL TRANCEPTOR
1 Q Z " "
2 A B C
3 D E F
4 G H I " " --> CORRESPONDE A UN ESPACIO
5 J K L
6 M N O
7 P R S
8 T U V
9 W X Y

^
|__ TECLADO

SI DESEA MANDAR LA LETRA "J" DEBERA MANDAR #5A# (SIEMPRE SE MANDARA EL
NUMERO SEGUIDO DE LA LETRA)
```

PARA MANDAR "MADRID" SERIA: #6A2A3A7B4C3A#
TE RECUERDO QUE SI TE PASAS DE 6 CARACTERES NO FUNCIONARA !

PUEDES UTILIZAR LAS MEMORIAS DTMF (MENU 9) PARA ALMACENAR MENSAJES. PARA ENVIAR LOS DTMF PROGRAMADOS BASTA CON PULSAR EL PTT+MHZ SELECCIONAR LA MEMORIA DTMF Y PARA MANDARLA PULSAR NUEVAMENTE MHZ

Espero que os sea de ayuda. Roberto Munoz

The company is still in business in Palo Alto, California. You might
be able to get a data sheet from them out of their ancient archives!
I doubt if they are building TWT's anymore, and probably have not
been for the last 20 years or so, but who knows? Maybe some
of the guys/gals from the SF Bay area will see your note and have'
better info. Sounds to me as if the tube was used below 2500mHz,
but again you never know.

From: bgluck@monmouth.com
Message-ID: <51msup$ll@news.monmouth.com>
Source record: 194007

I have the following for sale/trade:

Hallicrafters SX-110 ca.1959--covers 538khz-34mhz,CW,AM and SSB(using the pitch control),outstanding receiver in it's day, w/matching R-48 speaker, and manual, in exc working and cosmetic condition--$250.00

Grundig Satellite 500 shortwave portable. covers 535khz-29999khz; 88.00mhz-108.00mhz. AM-FM-USB-LSB, synchronous demod, 2 clocks,42 memories, direct freq input or tuning knob input, AGC, separate bass and treble, memory scan, sleep timer, etc. Nice rugged german portable in excellent condition--$225

Panasonic RF-B45 shortwave portable, 18 memories,memory search, am-fm-ssb, covers144khz-288khz; 520khz-1610khz; 1620-29999khz; 87.5-108mhz--exc cond, w/manual, $100.00

Zenith TransOceanic 3000-1 in excellent condition, w/manual, $275.00

Vibroplex Deluxe bug w/chrome base in exc cond -- $99.00

Nordemende Pro Traveller German shortwave portable(US version), ca.1960's, in exc condition, $350.00

Yaesu FT-11R 2 mtr micro scanning hand held. One of the smallest ham radio 2 mtr handies around. Receives 110mhz-180mhz and transmits on 144mhz-148mhz. w/manual&schematic, box, warranty,desk top charger, rechargeable battery, carrying case, ant. In as NEW condition $295.00

MFJ Grandmaster Memory Keyer (model MFJ 484C), Speed control variable from 8-50 wpm; weight control; tone control;volume control;delay control;4 memories,tune switch and much more. Outstanding memory keyer for contesting or just casual CQing. w/manual in exc cond --$89.00

Kenwood TM-211A mobile 2 meter transceiver, with the following features:DCS, tilting front panel for freedom in mounting,hi/low power switch,25 watts (hi)-5 watts (low),vfo scan,programmable scan,memory scan,priority alert,dual vfo's,matching external speaker,touch tone pad on mic. Note: I do not have the mounting bracket. can be purchased, if needed thru Kenwood. In near excellent condition w/manual and warranty card. $175.00

Realistic Pro 2003 base scanner, covers 30-50, 88.1-107.9, 108-136, 138-174and is in almost exc condition, w/manual and ant -- $95.00

Sony ICF-SW1 shortwave portable kit. Covers 150khz-29995khz and 76mhz-108mhz. Comes with active antenna in retractable case, earphones also in retracable case, separate carrying case for radio, ac adapter, US to European ac adapter plug,owners manual,shortwave station

directory. Everything comes in a fitted plastic attache type carrying case, perfect for travel. This is a quality sw receiver in a radio the size of a deck of playing cards. Excellent condition--$275.00

Kenwood R-5000 w/VHF module, optional YK88S & YK88SN filters, optional DC mobile kit, owners manual/schematic in Exc condition. One of the best. $795.00

Yaesu desktop quick charger NC-29 for use with Yaesu FT23R among others. Exc condition--$25.00

MFJ Versa Tuner II antenna tuner (model MFJ-949C), w/manual in VG cosmetic(has some scratches on top of cabinet) and EXC operating cond-- $75.00

And one that doesn't really fit in this newsgroup but I'll add it here anyway:

Original Escort radar detector in near MINT condition with manual, plastic carrying/storage case, spare bulb, cigarette plug/ cord. The original and still one of the best--and rapidly becoming collectible--$125.00
****
If you don't like the prices, make an offer, however, I WILL ONLY REPLY TO REASONABLE OFFERS. If you don't hear from me within a day or so, that means that I am still laughing at your offer and WILL NOT RESPOND. So please make the offer a good one. If you have anything to trade--I am in the market for other SW portables (especially Sony ICF-2010) and table top receivers(NRD 535, AOR 7030), scanners and radio related items,even antique radios--let me know what you have.
Regards, Barry WA2KLS

Hello Eveybody,
I am looking for a HyGain tape measure dipole antenna. This antenna
is actually two tape measure built into one piece, including the
feedpoint. All you do is pull out the apporopriate amount of tape to
operate on your frequecny, and you are on the air!
If you, or anybody you know, has one of these antennas for sale,
please E-Mail me as I am interested in taking it off your hands!
Thank!

Find a copy of 73 for October 1989. On page 31 there's an article
entitled "Put your IC-22S on Packet" by Michael S. Dooley. Maybe
a local ham club has back issues. Or try 73; they might have back issues
and if not, I think they will photocopy the article (1page) for a fee.

To All:
I am interested in hearing operational experience with this
xmitter. I am also interested in any suggestions for a reciever which
would be a reasonable historical match for this unit.
Is an octal plug required to be present for the operation of the
unit? There is not one present in the unit I have. I also have the Ameco
vfo, can't recall the model at the moment. It indicates 1.25cm band
capability. I would assume that the TX62 is not capable of operation iin
that band and that the 1.25 cm capability is a match for some other
xmitter. Anyone have information on this vfo?
Thank you for taking the time to read this posting and my thanks
in advance to all who respond!
George Andrews

true true..

i can understand YOUR view point and that other guys point (R.F.G)

BUT this is life

you dont HAVE to pay $40 $50 for stuff that is really CHEAP....

thats why i built a link cable for my TI-85 to my computer, cost me $1
at radio shack, they sell it for $40 or $50 !!!!!

you think pirated software makes prices go higher?
your WRONG
Software companies are riping us off charging us $100 for crapy
software.. its all business

anyways, 5 minuets wasted explainging

^^
Many thanks to Tom for posting this previously, I have used this list
to great
effect, and have looked-up mods for others posting requests here...but
I've
got other things to do, so folks, go hunt 'em down. For whatever
reason,
archie dosen't report many of these locations, so this list is a
necessity.

Now maybe we will see a reduction in redundant requests for mods?
If you don't know what this list is for, and you have a real (not just
UUCP
dial-up) internet connection ask someone who knows about "anonymous
ftp"

Even if you only have a dial-up, most listservs honor e-mail requests
for
files--if you know just where they are directorywise.

Ciao,
Michael Dahl
Again, thanks Tom!

Source record: 194017

Hi,

I have a problem.I have recently purchased an IC-706 and some VHF antennas.I got myself a 5-Element Tonna Beam for 50Mhz.Under regulations I can only have about 10Watts going to the antenna.I really like the band but I do not get the chance to operate because of TVI problems.My case is simple,where I am living we get CABLE TV and the allocations for SKY News is very close to 50Mhz ,I think it is 51,600Mhz I can hear the audio signal quite well on WFM on my rig.Also Eurosport is almost the same again a very close allocation.I have a problem with these two CABLE channels.I just wipe out SKY News and cause lines on the Eurosport channel.Even using 5Watts it is the same.My cabling is of the WestFlex type with proper connections etc.. to the antenna.

I would be very greatful if anybody had ant ideas,tips or cures of any sort that I could try at my side.I am living in a housing estate and the allocation for the band in Ireland is from 50.00-50.500 which is ok as it covers the SSB section.

Any suggestions and I would be grateful..

Regards Robbie EI8ESB...

I have no Email return address for you.
I dont know who told you that the 737 doesnt have that good a reputation, this 737 replaced the "Cadillac" Yaesu 767GX which I threw out the back door. The 737 didnt have all the bell's and whistle's of the Yaesu but it has received and transmitted 100% better than the 767 which NEVER worked right since the day I bought it. It had frequent flyer mileage to California.
The offer is acceptable but realize that it is a "as is" deal. Of course your welcome to come down and I would hook it up here to prove it is 100%. I have been burned once already when I sold a 6 month old mobile rig, and the fella took it home and hooked it up to a 1amp Radio Shack power supply at the molex connector he split apart, and hooked aligator clips to it when the wires touched. Needless to say this shorted the radio and he accused me of selling damaged good's after I spent an hour with him testing it in a parking lot hooked up to a car battery.
If you have a ham friend located midway between us, I would be willing to drive on a weekend to hook it up.
Reply back if still interested. I work mid-nights so if you call on the phone please do so after 1pm.

I have an ICOM IC-22S that I would like to modify for operation on the packet frequencies. I have seen reference to a mod for this.. involves changes to the synthesizer (new crystal? retuning?) to cover the lower frequencies with 20 KHz spacing.

Now that I need it, I can't find the details. Anyone know where this information might be. Anyone else who has done this mod?

Hello Bob,
I have been running an MLA-2500 for several years now.(although I am not a heavy user) I would say that I am a LIGHT user of the HF bands and I don't run the amp except when I need it.
I have never had any problem with the MLA-2500.
It will give me 1500 watts out on all bands with 100 watts drive and that's with less than 100 mills of grid current.
The only problems that I have heard of with the MLA-2500 is that you need to be very careful and not exceed the 200 ma grid current rating.
The MLA-2500 uses a pair of EIMAC 8875's.
The tubes are quite expensive these days so I hope mine last forever. I would guess I have had mine for 10 years now and it still has full output. I haven't seen any change sense the first time I ran it.

>Jim, WA1GPO

Hi Jim,
Had the same problem except I a had UHF MASTR II with out ICOM's. I
converted a set of VHF ICOM's to UHF by changing the cap in the ICOM
which connects one side of the crystal to the circuit board from 25 pf
to 13 pf.

Hope this helps

>receiver I'd be using it mostly (at least initially) for CW.

The Drake R-8A is a top quality receiver, and "could" be used for ham radio work, but it has one problem... it has no matching transmitter with which it can work in a "transceive" function.

On ham transceivers, the transmitter and receiver change frequency at the same time, so as soon as you hear a station you want to "talk" to, you just hit the mike or key, and away you go. The units usually have the ability to tune the receiver slightly off of the transmit frequency (RIT- receiver incremental tuning) in order to "clarify" the received signal. Sometimes they even have the capability to listen to a frequency far removed from the transmit frequency (split frequency)... a technique sometimes used for working foreign (non-US) DX stations. But most of the time, people like and use the convenience of knowing that their transmitter frequency is tracking their receive frequency as they tune around the bands.

A couple of decades ago it was not uncommon to have a separate transmitter and receiver pair that could still be used in a "transceive" type of operation... just like a transceiver. Drake had one of the best known and loved of these types of radios, the R4?/T4X combo (I had a Drake R4A and T4X and it was a great pair).

So, without this ability, with a Drake R-8A you would tune in a signal that you want to talk to. You will then have to tune your transmitter to a frequency close to where you are listening (with something like a Drake T-4XB you could get pretty darn close), then "spot tune" (an old technique) your transmitter onto the exact frequency you are listening to.
If someone else hadn't already started a contact with the calling station, you could then "talk" to them.

Not many people are willing to tolerate this level of inconvenience nowadays, though this procedure was the rule before the mid-1960s or so.

Sooooo... although the Drake R-8A is a great receiver, it's not necessarily the best choice for ham operation. Many of the ham band transceivers feature "general coverage" receivers, and many of them work very well. However, *none* of them have synchronous detection... and as one who loves sync detection, I think that is a grevious oversight.

Having both an R-8A and a ham transceiver is a great idea... if your budget will allow for it. :-)

4639. Maha Battery question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-18 00:00:00 UTC
From: tomms@mnsinc.com
Message-ID: <51nt2m$m78@news1.mnsinc.com>
Source record: 194025

I just received my MAHA battery on Monday.
I am using the FNB-38 for my FT11R.
I did not seem to transmit on it much at 5 watts, but it dropped off quick. Does anyone have a longer term idea of the duration of each charge. Key down on this battery was about 10 minutes over two days. Any ideas?

Also, does anyone know if the base chargers will charge Maha's other batteries? I have ICOM handhelds as well and I would not want to have to buy a different base charger for it.

Thanks,

Tom Schaefer NY4I

>If you want to pay for the copied key and postage.

actually I picked the lock and made a key for it once I took the lock
apart. I now have a key that will work. Thanks though. and the key
has a ridge down the center but it also has one on the opposite side
on the lower part of the key

again thanxs

> mhz. Unit is Mirage A-1015-G 6 meter amp 10 in / 150 out.
>
> Thanks and 73's
> Dave Wa8rfh

Dave:
I have the Mirage (same as yours) driven by a Kenwood TS680 which has
about a 10 watt output on 6. I have no problem driving it to full
output (150W) into a dummy load across the full 6 meter band. You
didn't say whether you're running these tests at ssb or fm; it is
very hard to accurately measure power with ssb modulation. BTW, if
I remember the bandplan correctly, 50.3 is not an FM sub-band, and
in any case, it's not the high end of 6 (54MHz is).
de N2MPU Jack
PS: I hope you're doing your testing into a dummy load and not an
antenna!

4654. Needed: Manual for Heathkit SB-110 6 Meter Rig

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-18 00:00:00 UTC
From: basil@turn.com
Message-ID: <MPG.ca9d9dd90d0ba06989680@news.gte.net>
Source record: 194040
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.swap

I need a manual for an old Heathkit SB-110 6 Meter Rig. This is an old tube rig, and is currently in non-working, but otherwise good, condition. I am willing to pay copy and postal charges. The more info I get on this radio, the better, so if you have articles or other writings about the Heathkit SB-110, I would be interested in those also.

Thank you in advance for your help.

Basil (Darin) Arrick, KB5KHR
basil@turn.com

4655. Needed/Wanted: Vacuum tubes

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-18 00:00:00 UTC
From: basil@turn.com
Message-ID: <MPG.ca9dbf15340ddfb989681@news.gte.net>
Source record: 194041
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.swap

I need a bunch of vacuum tubes for a couple of radios that I am working on: a Collins KWM-2A and a Heathkit SB-110 6 Meter Rig. Some of the tubes that I need are as follows:

6U8A (Qty: 3)\
6EB8 \
6EA8 ---- These are "must haves"
6DC6 /
6AZ8 (Qty: 2)/

12AT7 (Qty: 2)
12AX7
6BN8 (Qty: 2)
6AZ8 (Qty: 2)
6146B (Qty: 5)
6CL6

If you have any of these tubes, let me know. I would prefer to purchase them all from one person, if possible, but I will purchase them from different places, if needed. If I could pick them up (local to Dallas/Ft. Worth, Texas, area), that would be a _HUGE_ plus. I will pay shipping costs.

Thank you in advance for your help.

:
: thats why i built a link cable for my TI-85 to my computer, cost me $1
: at radio shack, they sell it for $40 or $50 !!!!!
:
I think it is great you want to build your own cable. Why don't you write your own interface software also? There are two pieces to the puzzle, the cable and the software. RT Systems sells a package that has both. Just because you want to create one piece of it doesn't give you the right to steal the other part.

Here's an idea...learn to program...manufacture your own cable...set up a business then sell your new software and mass produced cable for $1! See how long you stay in business.
:
: you think pirated software makes prices go higher?
: your WRONG
:
Re-read, my friend. I never said any such thing. I said you can't expect the same high level of support with no hassles if a company has to wonder whether or not you paid the price. I spent less than 4 minutes on the phone fixing my problem. Never once asked for a registration number or asked to hold while it was confirmed. The guy who answered the phone fixed my problem and I was on my way.
:
: Software companies are riping us off charging us $100 for crapy
: software.. its all business
:
I only paid $40 for my ADMS-1C software and in my opinion that was a fair price.
:
: anyways, 5 minuets wasted explainging
:
Sorry, I don't think you could learn to program, because you obviously never learned to spell. I guess I wasted my time as well.

4663. FT2200 and TM241A mods needed

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-18 00:00:00 UTC
From: keith@unm.edu
Message-ID: <51pes8$5or6@musca.unm.edu>
Source record: 194049

The Kenwood arrived yesterday, the Yaesu is on its way.

I need tx on 155.160 for search and rescue work.
I looked at oak.oakland, and found NO mods for the 241A, and no appropriate
mods for the 2200. Any assistance would be appreciated, including
directions to a more complete mod library, if one exists.
TIA - keith KC5CEA

4664. Re: IC-25A and IC-45A

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-18 00:00:00 UTC
From: kc5ng@dlep1.itg.ti.com
Message-ID: <51pklj$pe4@sf18.dseg.ti.com>
Source record: 194050

In article <3234F89A.32A9@snowcrest.net>, douglas@snowcrest.net says...
>Just found someone with an IC-25A and an IC-45A sitting on a shelf.
>Look to be in good condition, neither has a hand mic.
>What do you think they are worth and what are there features ie tones,
>power output, mods etc
>The IC 25 is a 2m mobile
>the IC 45 is a 70cm mobile

In nice condition, with hand mic and mobile mount and the manual, they are worth $150 tops (each). This assumes they are in perfect working order. I've bought working IC-25As with mics for $75 and $100 within the last year, but both needed cleaning up and minor work (see below).

Both are prone to VCO instability due to poor soldering. This can be easily fixed by removing the metal shield over the foil side of the PWB and re-soldering _EVERY_ joint in the VCO section (an Icom repair technician showed me this trick).

I've had a 50R for a month. It fell 5 feet onto gravel and no signs of
damage. Really great audio, and a scanner better that a BX 200xlt! I
still need the manual to program it. Good signal report on the ducky. SMA
connector is a minus. AEA hot-rod looks like a Sequoa tree on a tennis
ball.

Is it April 1st? Did I miss something here? You have got to be kidding.
The R8A offers more filters, more memories, a more robust front end,
computer control, and the list goes on... for the price versus features
it is probably the best buy in North America. In Europe the R8A is more
costly, and the AOR 7030 has the advantage.

Akiumi!!
Are you related to Mr. Hasegawa who was the founder of Yaesu Musen
and ran the company until he passed on a few years back????
Sorry, Akiumi, I don't recall Mr. Hasegawa's first name. I met him
back in 1985.

No relation. So I'm using Kenwoods TS-50V.

Hasegawa is one of popular family name in Japan.
The family name of the owner of my favarite radio shop is also "hasegawa".

He said that he found many hasegawa in his client list. He concluded
that "hasegawa" may have a tendency to catch ham flu. hi. hi.
And its true for me.

73/88 and CU on the air.

Thousands of miles!
Ground wave is tremendous too. I get excelent signals from almost all simplex operatiors in the valley, FM. Repeaters are few here, and get little use, but I am sure that will not be the case as more people buy rigs with 6m built into them such as the TS-690, IC-736, IC-706 etc..

On a daily basis, I can bring up a repeater in Prescott (Mt. Union) from my location here in Glendale (Phoenix). That's over 80 miles, and over a bunch of mountians too. Signals are higher durring the day, but at night there is less noise on the signal. (Not sure if its on my end or not though)

It seems like every other day, Southern Texas booms in on 52.525, full-quieting.

SSB is SSB. I have a vertical, so signals are not what they could be, but I have worked a few grids when CDX are good.

4687. A ProComm Plus Script to Control the AEA MemoryMaster Keyer

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-19 00:00:00 UTC
From: "Don L. Miller" <dlmiller@fishnet.net>
Message-ID: <3241FF7E.2AD7@fishnet.net>
Source record: 193874

I have written a ProComm Plus Aspect script which is designed to be used
with the AEA MemoryMaster Keyer. You can download it at:

http://www.fishnet.net/~dlmiller/mm3.html

The MM-3 is a dandy device for learning the morse code. You can hook
it up to your computer and take advantage of its built-in QSO simulator
to prepare for your next upgrade. Everything sent by it will appear on
your monitor.

If you have your paddle plugged in, you can even talk back to the MM-3
during a simulated QSO. It will learn your callsign, your name and even
your QTH. The ultimate diplomat, the MM-3 will assume that any
inability
to copy your morse code is due to QRM rather than a "bad fist"!

The MM-3 also has the capability to send you random practice code
groups.

System requirements are:

ProComm Plus (DOS or Windows)
The AEA MemoryMaster Keyer (also called the MorseMachine or MM-3)
A IBM-Compatible PC with a VGA Monitor
The Serial Port Cable described in the MM-3 Manual
A paddle (Optional -- If you want to "talk back" to your keyer)

4692. R-8A for SWL DX and HAM work?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-19 00:00:00 UTC
From: TESTRELLA@delphi.com
Message-ID: <51qjt9$4ae@news2.delphi.com>
Source record: 193929
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment

Eric,

Sorry...I missed the initial comments about using it for CW.

The R8A has a few very annoying and widely discussed problems.

1. Drake changed the AGC circuit and this apparently has affected the ability of the sync detector to stay locked. On my unit, an S40 signal...yes an S40 will fluuuuttteeerrr and fluuuttteeerrr when the sync is activated. Sherwood Labs has confirmed this on their lab units and I've tested several different R8A's and have seen the problem in every unit. The sync is essentially useless on the R8A.

There is a wide variation in sensitivity to this problem. I 've seen people listen to the fluttering sync and say..."what problem....I don't hear a problem?"

2. The Noise Blanker simply doesn't work. Drake has admitted this and will give you instructions to fix the problem.

Amazingly, the SW-8 with the redesigned Sync is marvelous. Solid...no locking problems and good seperation of sidebands. Very sensitive and no signal overload problems.

IMHO <G>.

Hi all from Joel in Calgary. I just changed the backup battery in my brother's TM-231 2m mobile. The radio's brain now seems to be working fine again, except... The radio, on all 3 power settings, only puts out about 60mW. While doing this it's drawing about 3 amps! Have I somehow killed the p.a.? Anyone with suggestions, or anyone with a service manual I can copy, please get ahold of me.

Thanks...

4699. Kenwood TS950SDX Comb filter disable on CW?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-19 00:00:00 UTC
From: david@braeside.demon.co.uk
Message-ID: <AE66E1819668246393@braeside.demon.co.uk>
Source record: 193936

TS950SDX

Althought there is a method of switching off the DSP comb filter on SSB from the menu, there does not appear to be any way of switching it off when on CW.

It IS on as you will discover if you tune over a carrier with a 2.4KHz filter on CW. - There is a deep null in the audio passband at the middle of the filter.

Of course it does not matter on CW if using narrow CW IF filters as the audio null is outside their passband.

Especially noticeable on AF9Y's DSPFFT software running on the PC. That is the main reason I want to switch it OFF on CW. I would like to use wide filtering on IF and DSPFFT to detect very weak signals in the passband. As a kludge I use the SSB position on RX and switch off the Comb filter.

Any one know any other way?

Hello and thanks for reading this message.

Due to shipping trouble :-(, I need some spare parts for my
recently acquired Heathkit HW-101. Basically, spare front pannel knobs (I
think they are all similar, except the dial) but later I will need more
things (some tubes, chassis parts and so on).

Please, if you know of any source of parts or you have one HW-101 useful
only for parts, please, let me know. I would like to put it again in
working condition!.

THANKS!

Please, e-mail to: EB5AGV@AMSAT.ORG

I have two RCA 4CX1000A available. Offers? I have a want list I will trade for

These are the tubes I m looking for. Most tubes would need to be new old stock, but some used types are OK when noted. n for new, u for used. As far as pricing, depends on the brand. Since I am looking for certain things to fill in holes in inventory, it will be substantially higher than what you will get from other dealers. Especially audio tubes.

4708. Range of 6 meters on a good day?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-19 00:00:00 UTC
From: dgreiner@utep.edu
Message-ID: <51quj6$96o@lex.zippo.com>
Source record: 193945

I've posted this before, but it hasn't appeared on any of my other
servers, so I'll post again. On a really good day with the
"sporadic" e and the likes how far is possible to talk on 6 meters?
I've noticed that most rigs are only 10 watts, but am considering a
50 watt rig. Am I going to get a very big difference between the
different wattages. And lastly :> about how many 6 meter reapeters
are there in the US? I know there's 2 here, but since I occasionally
make trips, what can I expect to locate out there. I believe the
96/97 repeater atlas covers 6 meters, but I haven't found it, or
even know if it's come out yet ;>
Oh well, Thanks ALOT, for the info.
-David-

4709. Amps of a power supply???

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-19 00:00:00 UTC
From: dgreiner@utep.edu
Message-ID: <51qv06$98k@lex.zippo.com>
Source record: 193946

I also posted this question before, but since it also never seemed
to appear, I'm going to ask again, just this time I'm going to
shorten the question.
If a transceiver needs 20 amps of for full output power, and you
buy a power supply (the correct Volatge of course) that is 35 amps
will the transceiver only use the 20 amps? What I want to know is
that, the power supplys don't force 15 more amps into the transceiver
right?
Once again, I really appreciate the info, given to a new ham.
-David-

Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.swap

I have found a source for those DC power cord plugs. The ones I've got
have 6 pins, male plastic with metal female (barbed) inserts.

The plug fits most 12VDC HF radios:
Icom 720, 735, 706.. and alike, newer Yaesu models and Alinco DX70.
Kenwood-TS120, 130, 140..430, 440, 450..850,..TS50,60, 660, 670...and alike.

Make your own power cord yourself, YOUR WAY!
Crimp or solder, long or short, heavy gauge wire, purple with polka-dots...

I'm offering the 6 position plug with 6 inserts for $4 each,
or a deal 3 for $10. All prices include postage in the US.

To order, kindly send a check to:

R. Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: n2cjj@ibm.net

It's a great deal if you use one rig at home, in the car and at work and
are stuck dragging one power cord all over....

I still can't believe AES, HRO and others get $30 for a power cord. HiHi!

>Any one have this problem and know the cure?

I bought a used 735 that I thought had a heat related problem. Parts of the display would go blank and the freq would change. I though it was heat related because I run the rig mobile and it happened on hot days or when the sun got on the rig. After weeks of trying to isolate the "defective" component I decided to do solder joint touch-up. Much to my amazement I found a fractured solder joint near the main processor on the board that is hardest to get to. If I were you I would put the rig on the bench, open it up and tap on the circuit boards in various locations to see if heat expansion is just causing open solder joints.

: that, the power supplys don't force 15 more amps into the transceiver
: right?
: Once again, I really appreciate the info, given to a new ham.

Well first, welcome to the hobby KC5WDR! You don't have anything to worry
about with a 20A rig and a 35A supply. The radio will only draw what it needs
from the power supply. The power supply should be able to provide more
current than the radio needs, just as a safety margin. 35A might be a
bit of overkill but you will accumulate toys to use up that extra current :)

> -David-

There are other people that know more about this than I do, but
I will take a shot at it. Generally, when 6m is open, expect
a single hop distance between 1000 miles and 2000 miles.
When it is open, small power is enough. Note, however, that at
this phase of the sunspot cycle, openings are rare. There are
quite a few 6m repeaters; I know of one in Denver, for example.

4721. HF Receiver technology

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-19 00:00:00 UTC
From: Sean Dyer <sean@wubios.wustl.edu>
Message-ID: <3241A5BD.D84@wubios.wustl.edu>
Source record: 193958

Does anyone know what the latest in HF receiver design is? I've been researching and looking around at receivers and it seems that variations on the superheterodyne are still the state of the art. I was wondering if there are any new alternative designs or if any of the older simpler designs such as the regenerative and direct conversion receivers have been improved to the point of useability. It's my understanding that the superhet design was first introduced in the 1920's, it seems to me that with the DRAMATICALLY improved state of electronic technology in 1990's that receiver design would be significantly different. I would be interested in any information or comments anyone may have on this topic.

Thanks
Sean Dyer

Hi Chris,
All of the Syntor's I have seen have to be programed
with a Motorola Briefcase programer. (VERY expensive)
My suggestion is to contact to local Motorola shop
and see what they would charge to burn a prom
for you.
Hope this helps, Rod (KD0XX)

Single-hop sporatic-E, 400 to 1,300 miles. Multi-hop
intercontinental. F2 backscatter contacts up to 2,000 miles. Sunspot
peak (11-year cycle) provides world-wide communication on 6-meters. I
have talked across the country many times with 50 watts AM and a
6-element beam. Hope this answers your question.

Source record: 193961
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I just picked up an IGC "Smarttuner" at a hamfest and wonder if anybody has had experience with the unit. I'll probably not use it mobile, but as an automatic long-wire tuner, probably with wires as long as 250-300ft. IT's rated at 150W PEP, and I'm wondering if it can handle cw and am at that power level. Generally, I'd be interested in hearing from anyone with experience with the unit.

Tnx and 73,

Jim W8ZR

The superheterodyne technique is a way to attack the so called
gain-bandwirth
and noise bandwisth problem in circuits (wires with electrons bumping into
one another within the conducting material.) The flow of current, and
thus
info, is NOT the movement of electrons at light speed; it is the wave of
force of the electrons bumping into one another as a result of either an
applied
voltage potential source at one end of the conductor, or the passing, and
thus
amplitude-varying -with -time magnetic field crossing the electron
containing
conductor.

There is a fundamental physical principal which comes from out of thermo-
dynamics which says that noise amplitude is proportional to bandwidth,
conductor temperature and a constant of proportionality(which won't be
defended here) called Boltzman's Constant. This constant integrates
together a bunch of info about nature that has already been established
as fact. Therefore, for an HF electromagnetic wave receiver to have
very weak signal sensitivity, the amount of noise in the receiver's
circuits
must be brought as low as possible. In fact the lowest it can become
would be exactly those microvolts or -dBm's that would be calculated
applying the above formula for the circuit temperature and signal band-
width of interest.

The hetrodyne technique (copywrited by RCA as Superheterodyne
Receivers in the later 1920's) is still, at this time the only way to
both add gain to a very weak recv'd signal and to narrow the bandwidth
down to reduce the noise accompanying the signal, and also recuce

the noise introduced by the circuit electronics: this added circuit noise is called Noise Figure of the gear and is usually only of much interest at UHF and microwave frequencies. This is because there is a huge amount of noise which accompanies signals in the HF bands from the background emmiters of the Galaxy, far more at the lower frequencies than that added by the circuit electronics--this is why low noise preamps are usually not used in HF gear, whereas above 100mHz or so, they are very common. HF gear does often have an RF gain stage ahead of the first IF stage mixer, but its purpose is not necessarily increased sensitivity, but to reduce LO radiation back out the rcv'r front end whcih could play hobbs with another rcv'r nearby, and to reduce the impacy of out of passband nearby strong signals.

The most costly HF rigs today have up to four downconverting IF frequencies,
even now going down to 10 to 15kHz IF center frequency: here modern DSP technology can be applied at IF, rather than after detection and conversion
to base band(audio frequencies).

So the only way to have a very high sensitivity rig, is to have a unit which
can wander all over the HF bands, and detect signals using extremely narrow bandwidths to lower the noise power whcih will acconpany the signals; this technique thus increases signal to noise ratio amplitude.

Modern semiconductor technology does nothing about narrowing bandwidth of circuits; in fact modern semiconduntors have inherent very wide bandwidth amplifying characteristics; just the opposite of what we want in a very sensitive rig! The road to better rigs lies in the direction of hight
speed digital circuits; A to D and D to A converters. These will allow the DSP technology to be applied at higher that audio IF band center frequecies, and should yield very sophisticated noise eliminating techniques, as well as coherent signal enhancement.

This is the direction to newer traditional HF band receivers; I believe also this is the direction that new SOA digital modulation technology recvr's will also be going. Now, the cost's of the needed highest speed digital components exceeds what amateurs will pay--$10 to $15 for a transceiver? Probably way too high for a manufacturer to risk developing and marketing at this time.

Hope this helps some.

You can talk west coast to east coast with 10W and a 3-el yagi, at
least that's the farthest for me.

On any day, you can talk to the next grid square.

On a reasonably good day in the sporadic E (Es) season, you can
talk halfway across the country (e.g. TX <-> CA)

On a very good day you can talk across the country, or maybe to
Europe.

Hi--

Single-hop E-skip will get you up to half-way across the country and double-hop can span the entire country--or get you into Europe from the east coast. However, except for a three-to-four week period during June/July and another shorter period mid-winter, E-skip is sporadic at best. Six actually exhibits several other skip modes including aurora, tropo scatter, meteor scatter, and other less specific modes. The real plum will be coming in three years or so when F2 world-wide propogation should begin. Some of the more exotic modes take more than 10-50 Watts to pull off. With 50 Watts and a decent antenna, you could easily work 100 or more grid squares in a year if you work at it.

Good Luck--

Rick--K1BQT

As reported here about 3 months ago, Alinco has released the Alinco DX-70G in Japan. It has just gained FCC Type A for sale in the USA so look for it soon. Details? It is, infact, the same chassis as the DX-70T except now includes 100W PA on six meters. The PA deck is also "sold separately" for those who own a DX-70 and want to upgrade.

: You would be better putting a good HI Pass filter on your TV
: Joe K7CJ

A high-pass filter will not do you any good at all. The high-pass filter must pass freqs. from 54 MHz (bottom of Ch. 2) on up. It's meant to filter out HF freqs. and won't help at all when the transmitter is at 144 MHz.

I don't know of any commercial source for filters. You can always "roll your own" using info found in any ARRL Handbook (both lowpass and bandpass for your rig and/or notch filters for the TV); however, at VHF the construction techniques get a little tricky. Before I resorted to this kind of thing, I would consider the possibility that the problem may be the result of RF conduction over some undesired path (e.g. through the power cord of the rig or the TV, or through the shield braid of the TV coax). Try some cheap ferrite toroids or "split beads" on these conductors and see if it helps.

It's also possible that you have an incidental rectification problem. Make sure that the connections for your rig and antenna are clean, tight, and corrosion-free. Do the same for the TV antenna connections, including any outdoor antennas.

All the above assumes you're talking about over-the-air TV reception. If the problem TVs are on cable, you have a cable system ingress problem that the cable company must resolve. (And if they don't, call the FCC -- I guarantee you WILL get some action from them!)

4742. _Standard C156A, 2M HT - your opinion!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-20 00:00:00 UTC
From: b-holt3@ti.com
Message-ID: <51u2c8$633@sf18.dseg.ti.com>
Source record: 193886

Just say an Ad for the Standard C156A in Septembers issue of CQ VHF.

The Ad states that this 2M HT is less than $200.0.
Looks like a nice HT.
Rx: 135 - 174 Mhz
Tx 144 - 147.995 Mhz
Alpha-Numeric titles
paging, code squelch, tone encode
Tx time-out timer
9 DTMF memories
100 memory channels
Dual watch mode
and more......

Anyone have this HT?

Or have an opinion on it or the Standard HTs in general?

Regards,
Brendon Holt (b-holt3@ti.com)

>that, the power supplys don't force 15 more amps into the transceiver
>right?
>Once again, I really appreciate the info, given to a new ham.

Dear David from a very long term radio amateur:
If you have a power supply of reasonably constant voltage that is
capable of suppling 35 amps and you connect it to a load (transceiver)
that expects to be supplied with the power supply's voltage, then
only as much current (as long as it is less than 35 amps) will be
drawn from the power supply as the load requires.
.. A constant current power supply (which might force too much
current into the load) is rare - you are not going to find one.

Good luck.

4746. AEA PK-96 help needed

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-20 00:00:00 UTC
From: tsarah@gwis.com
Message-ID: <51uil5$hi1@gwis.com>
Source record: 193890

I'm trying my hand at packet radio. Following is the equipment in use:

AEA PK-96 TNC
Yaesu FT-8000R
IBM cloan running PC PakRatt Lite

Now the problem. The radio and TNC are about 25 feet apart. There are times when I hear packet tones on the radio and the DCD light on the PK-96 comes on, but nothing is seen on the screen. Other times I hear a real strong signal, but the DCD light doesn't even flicker. Once in awhile I do get something on the screen, but not very often.

Is the cabel length a problem? Do the TNC and radio have to be fairly close together? Any suggestions.

Ted

> one who loves sync detection, I think that is a grevious oversight.

Apparently, the Yaesu FT-1000MP has an AM sychronous detection mode
that's activated by pressing the AM mode key twice. I heard this from a
friend who has one-- It's not even mentioned in the manual!

Also, Drake is considering development of an HF ham band transceiver (the
TR-8?) I spoke with an employee in their service department who said
that the people in marketing aren't convinced it would fly. He
encourages everyone who would like to see Drake re-enter the ham field to
write a letter to their marketing department!

A constant current supply would probably fry your equipment, since
it would, in theory, increase the supply voltage until the desired
current was flowing. I suppose, in real life, this would make
smoke come out of a radio.

[...]

We have the same problem in Germany with 2m and cable TV (channel S6).
Most houses use their old antenna wiring (cheap, badly shielded coax)
for cable TV as well. If you can hear the audio signal, the shielding
is not suitable enough, so the coax cabling in the house has to be
re-done using quality coax with double shielding. This will however
be rather costly, so I don't see too much hope there. Perhaps it's
only a faulty connection box.
I would start with checking the connections (using a dummy load as
an antenna when pin-pointing the leak), going to the coax next.

Hope that helps,
Jens, DB9LL

The lastest and greatest is of course digital technology and some of this will be (is) used with Analog to Digital conversion and vica versa but the real jump in technology as far as RF communication is concerned will be when the signals are transmitted as digital signals.. this is already coming for some bands (cellular) and of course this is incompatable with the current receivers... kind'a like high tech CW but a little more complex than morse code. And when will hams start using spread spectrum (SS)? i.e. call w/o SS and exchange codes.. then go to SS mode. In fact, my bet is that there are already hams doing it..

You are wrong! It costs money for the programmer to sit down and program all these functions and features. Programming is not easy and hard work when you have to debug your code. So yes somethings are worth the money. I paid $39.95 for my ADMS software and felt it was well worth it considering that you can do so much with the software. It is great to have a way to input so much all in one shot instead of using the keypad.

So pleasee purchase the software! Hobbies always cost money. I figure mine will cost me an easy $3000 before the year is even over with!

According to my manual, the FT-736R output is 25 watts on 2 meters and
70 CM. The 6 meter module is rated at 10 watts. These figures are
about what I get when using FM, however, the reading on SSB is much
lower (yes, I am using a peak reading watt meter)

4775. Actir Antenna Noise Canceller

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-21 00:00:00 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <51vrh1$q6v@portal.mbnet.mb.ca>
Source record: 193829

In article #32230, Paul Newman referenced an article in the May 1996 issue of CQ Magazine on a noise-cancelling device "QRN Squasher". Article #25605, criticized this article, indicating that the device described in CQ "will not work".

Doug DeMaw, W1FB, was the author of the May 1996 article. Doug is an extremely well-known and respected author, designer and radio amateur and, I believe, deserves a chance to comment on the criticism made of his "QRN Squasher". I wrote to Doug providing him with copies of the postings pertinent to his article, suggesting that he input something to this Newsgroup. Since Doug now lives well out in the country, he has no means of effective Internet access, but did reply to my letter with the following comments.

"I assure you that the QRN Squasher works as stated. I have never unleashed a bad circuit in the publications. In fact, AEA Corporation called me and talked me out of second model of the Squasher for testing. They will release a commercial version of my circuit later on. Also Ten-Tec Inc. is planning to market a kit version of my Mark III Squasher. I have not published that circuit as yet, but gave full rights to Ten-Tech. They have phototyped it and are impressed with the performance.

Indeed, the Squasher can handle only one noise source at a given time. I suppose if one had two or more serious local QRN sources, cascaded Squashers would be a solution to the problem. I have a 10-KV high line some 100 feet from my antennas. At times, the hash is 20 dB over S9. When I engage and adjust my Squasher I hear zero noise. Noise can be nulled up to 50 dB with my unit. The JPS ANC-4 works equally well. I did a CQ product review of that gadget, but JPS would not give me a circuit diagram to inspect. The PC board was loaded with components. My circuit is quite simple by comparison. It works equally well. I have also evaluated the noise cancelling made by S.E.M. on the Isle of Man. Again, no circuit diagram could be obtained!.

FAR Circuits has reported selling hundreds of PC boards for the Squasher. Fred told me recently that many of his customers have reported excellent results. I have yet to receive a letter of complaint or inquiry concerning

inferior performance. Comforting, to say the least!"

I felt that Doug should have the opportunity to input
these comments to the Newsgroup and therefore have posted
them on his behalf. I have always enjoyed his books and
articles, finding them to be extremely valuable contributions
to our hobby and it would appear that his QRN Squasher
is another valuable contribution.

The tip of a WEN is Iron not Copper. Test it with a magnet.

I think the tips are still available but under another brand name.

Try Rat Shack, but test them with a magnet. Weller is the other brand
that uses a Copper tip.

I am not familiar with the laws in your country or the requirements of the the cable company. However, it should be the responsibility of the cable company to contain its signals withing the wire. Obviously that is not happening and allowing your signals to enter the wire as well.

I have a similar problem where my 1W packet radio is getting into the local cable. However, I have notified them, as well as ensured that the ingress is not on my property, and have continued to operate. As far as I am concerned, it is now their problem, not mine, even if the cause is someone else's improper hookup.

4791. FT2200 and TM241A mods needed

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-21 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9609201820422464@atdbbs.com>
Source record: 193845

This mod is only intended for experimental applications only! Know what
freq you are on and don't use this mod if you are not for sure.
The TM-421a is capable of transmitting from 136 to 174 MHz when the following
modification is performed. The transmitter specifications will vary from
published in-band specifications.

1. Remove the top and bottom covers from the transciever.
2. Remove the knobs from the front panel.
3. Remove the nut from the mic jack and the nut from the channel selector
switch.
4. Remove the 4 screws that secure the front panel to the body of the
transceiver
5. Pull the front panel off the transceiver to expose the Control board.
6. Remove the 3 screws from the Control board. Gently pull the board off
the transceiver.
7. Cut the GREEN jumper wire on the Control board.
8. Install an MA141A chip diode or 1N914 diode as D209 on the Control
Board.
9. Reassemble the transceiver by reversing steps 1 - 6.
10. Reset the microprocessor by holding in the MR key as power is turned
on.

I haven't tried or verified this, proceed at your own risk. And do not
transmit outside of legal bands!

Yes the smarttune rcan handle full power on a continious basis but not
below 2mhz. It will also handle very long wires but possibly with some
gaps. You may need to lengthen or shorten on some freq.
SGC will send you an instruction book.
If you have problems they are very good about fixing them
You will be happy with it.

I've used one for just a few weeks. It is able to tune my HF vertical (Gap) to less than 1:3 swr across the entire band, and less than 1:1.5 in the interesting parts of the band. It has a built in meter, which operates on all bands (an extra I didn't expect). I'm pleased with it.

Hello!. Thanks for reading this message.

As title says, I need the schematics for an Accurate model 156
'Genometer', because I'm in trouble with it; it generates distorted
signals. Also, I would like to find the manual.

Please, e-mail me to: EB5AGV@AMSAT.ORG

Thanks!

To make a long story short, heterodyning, or mixing of 2 signals thru
a non-linear element to utilize an intermediate frequency will not be
going away for some time. There are many variants i.e. single, double
conversion, triple etc etc...and some interesting other types of
mixing used to get the same effect.

If you have the time, there is one interesting application called
the Wadley-Barlow scheme. The Yaesu FRG7 uses this unique system
invented by these fellows. I believe Wadley was a South African.

There are lots of books out there you have yet to discover, I like
one from TAB books published about 5 years ago on the subject of
current technology in high performance rcvrs... Dont remember the
name of it.

It's interesting, isn't it?

>I've noticed that most rigs are only 10 watts, but am considering a
>50 watt rig. Am I going to get a very big difference between the
>different wattages.

I've worked 48 states on six using an indoor dipole and about 100W.
Many of the stations I work run only 10 watts or so. When there is
good E skip a 10W rig is well above S9. You won't see much difference
going from 10 to 50 watts. You can buy a beam and have the same
signal with better reception when the band isn't wide open.

Most E skip is in sping and some in January. The way I do it is just
leave my radio on when I home and run to it if I hear anything.

Best Regards,

John, W0GN

Message-ID: <51vfl7$5j2@wellspring.us.dg.com>
Source record: 193920

Hi,
I'm Jay Appell KA1SNA and I am the author of several manuals written for Alinco several years back. With time the E-mail has still come in regularly on those projects. I do not work for Alinco now but I would like to meet many of you who I have corresponded over the years. I will conduct a live internet chat forum on Microsoft NETMEETING Saturday September28th at 10PM. If you aren't aware, many of the manuals were rewritten from jinglish to real english. These were the 1st electronic amateur radio manuals ever written in the ind
ustry. Like Paul Harvey, come here the reast of the story. Here is what you will need to get online with me.

1st:

You should download Microsoft Explorer 3.0 from www.microsoft.com. It contains all of the components needed for to get online. It has the new Microsoft browser and a utility called NETMEETING. If you have NETSCAPE, don't worry, the program will ask you if you want a browser change to Internet Explorer, say NO.

2nd:

When NETMEETING BEGINS you should fill in a couple of simple entries, then you will be logged in by default into 1 of many servers used for the NETMETTING experience. The default will put you into uls.microsoft.com.

3rd:

Click on TOOLS, then OPTIONS, then MY INFORMATION.

LAST:

Under "User Location Name Server Name", enter "uls.microsoft5.com", without the quote marks. You will see KA1SNA in the list of names revealed on the screen, just click and you will be online with me. I can chat with you or speak with one at a time while chatting at the same time. YES you can plug your mic into your sound card and I will hear you talking and visa versa.

Looking forward to meeting you, get your friends and see you then on Septemeber 28 at 10PM ET. I will answer your questions and let you know more about these radios and my project with Gordon West and more!! Get rewritten manuals electronically for some of these radios. They are re-written manuals that have REAL information that you can use. They are FREE...

We will talk about the 59X series radios, 600 and many handhelds, F1 560, 510 etc. and mods! I am not prepared to address any of the newer radios.

Get setup and ready and I'll see you online!!!

I have the 736, and like it a lot. Of course it is larger and heavier
than the TS-50, but you don't have to lug a power supply along either.
Everything is self-contained. Also, the IC-736 has 100 watts at
6-meters, if that is important to you. The built-in antenna tuner
also works on 6-meters.

It appears that the IC-736 is being discontinued as I see close-out
advertisements in QST now. Have not heard any rumors about a
replacement.

<SNIP>

> them on his behalf. I have always enjoyed his books and
> articles, finding them to be extremely valuable contributions
> to our hobby and it would appear that his QRN Squasher
> is another valuable contribution.

Random noise from random antennas may arrive in any phase or amplitude relationship from the two receiving antennas. In order to properly null noise, phase shift must be rotated through an entire 360 degree rotation, or as close to it as technically possible. Secondly, it is very important that the amplitude remain constant as phase is rotated, or null adjustment become cumbersome. When you "hit" the point of phase cancellation, if the amplitude has shifted you will tune right past the null.

I like and respect Doug also, and have known him for years. But unfortunately, the QRN Squasher phase shift network does not work as described in the text. The phase shift circuit in the QRN Squasher WILL NOT shift phase, other than a meager shift caused by the stray capacitance in the circuit and the series resistance of the pots. Both R1 and R2 are primarily amplitude controls that serve identical functions, either control flips phase 180 degrees once moved past the null point established by the other control.

A close look at the schematic will reveal the problem. From the secondary of T1 to the gate of Q1, the circuit is symmetrical. There is nothing in the bottom leg to cause an opposite phase shift from the top leg, except the 180 degree polarity shift of T1. Now f the top leg has a series inductor, and the bottom a series capacitor (of suitable reactance) the circuit would indeed rotate phase, but it would still be plagued with horrible amplitude shift as phase was varied.

On paper I calculated a maximum phase shift of 35 degrees at 25 MHz, and only a few degrees at 2 MHz, other than the hard 180 degree flip caused by moving past the center tap point of R1.

In measurments of the published circuit, built exactly as described, a Harris Vector Voltmeter proved the circuit behaves very poorly as a variable phase shift network. Phase shift simply leaps from +40 degrees, to - 145 degrees....a 180 degree jump..... as either R1 or R2 is rotated past the balance point. Both controls provide exactly the same function, changing amplitude over 40 dB while hardly shifting phase except for the 180 degree flipwhen crossing the null point.

The phase shift circuit in the unit does not work as described, on paper or in a real test. It may under narrow conditions null noise, but mostly by luck of the draw. The ANC-4 works far, far better. I have both.

Alot of folks should be EXTREMELY CAREFUL when dealing with anyone on the
"net" looking for Moto software !
The folks at Motorola are very actively trying track down and deal with
through the full extent of the law ANYONE
violating any aspect of distributing, unauthorized program etc with their
software. If it ain't specifically licensed to
you, then as far as Moto is concerned your a target. Believe they are
going after folks. Even at ham fests and yes, here on
the net. Laugh it off if you want. It sucks. But it's there toy.

Ask some of the folks in the Chicago area who Motorola has some high duty
suits against. The guy at the Fort Wayne, IN hamfest,
down in Texas, etc etc etc.

From: Neil Hosker G8UEK <Neil@neil.co.uk>
Message-ID: <YI9r4AAIYWRyEwa9@morgan2.demon.co.uk>
Source record: 193736

I have recently acquired a low band and UHF MC Micro mobiles. They are programmed on the amateur bands which is great, but they don't have the local repeaters/natter channels in them. How do I program them? I know I need software but do I need to use a RIB (which I have got for programming my HT800's & GP300) or do I connect straight to the PC? I believe I connect to the mic socket for programming, but which pin (or pins)?

The next question is can anyone tell me where I can get the software, maybe I could swap with someone (I have a simple circuit for a RIB that works and software for a number of sets).

Date: 1996-09-22 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <523qff$f74@omnifest.uwm.edu>
Source record: 193737

As there have been a number of questions about 50MHz lately, I thought I'd mention (and recommend) the following book. It is the best comprehensive introduction to Six that I know of, and will be particularly useful for newcomers (or those who are considering getting on 6m):

"Six Meters: A Guide to the Magic Band" by Ken Neubeck, WB2AMU

Price: $14 postpaid. (Calif. residents add 93 cents state sales tax.)

Publisher: Worldradio Books
Box 189490
Sacramento, CA 95818

I have no relationship to the publisher nor author, beyond that of a satisfied user of their work. I wish everybody who just got a IC-706/DX-70 or other 6m-capable rig would read it, especially the sections on band plans and correct operating procedures.

4827. FW: Heath Intellirotor?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-22 00:00:00 UTC
From: ke7gh@primenet.COM
Message-ID: <01BBA8B3.39505940@ip112.phx.primenet.com>
Source record: 193740

I have a Heath Intellirotor that is under the weather.

All seems to work alright except the position feedback
which is not all that complex, but until I get a scope
I am unable to isolate the problem, unfortunately.
(working on a deal on a Tek 466, but I'll have to wait)

It has been time-consuming to go through the calibration
repeatedly to find that it still does not work. It is
NOT merely the 741 or 555. The microprocessor is fine.
(Heath stills sells surplus as is but does not support them)

Anyway,

1) Anybody out there fix these?

2) Anybody have an extra control unit (keyboard/display)?
I'd buy it seperately or complete setup.

3) Anybody want to buy mine "as is"?

It is a 'neat gadget' but is useless sitting on the shelf.

IMHO this rotor controller is the best out there as it allows
stand-alone control of antenna position by grid, country, bearing,
prefix, etc etc. Also automated features to protect T2X brake.

If somebody wanted a really neat project, building a modern
replacement for this little gadget would be near the top.

(I have seen new controllers, but none I've seen allow the degree
of stand-alone control with built-in keyboard/LCD display as well
as computer control, but I'd listen to alternatives possibily)

I would have thought that was some 180 degrees too far for
cancellation.

4831. T1910 Laptop Help

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-22 00:00:00 UTC
From: ke7gh@primenet.COM
Message-ID: <01BBA8BF.E8B4BF00@ip145.phx.primenet.com>
Source record: 193744

Have built/fixed numerous ISA/VLB/PCI computers,
but never opened a laptop before, so I have a few
(hopefully) simple questions about my T1910 mono
laptop (486SX33 4Mb 200Mb):

1) how to add numeric co-processor?
2) how to add 4 Mb more RAM (to 8Mb)?
3) how to install Win95?
a) worth the trouble?
b) from CDROM over network?
c) other?
d) will it work (how well)?

Have an older 10bT PCMCIA card in it which I use
with the Microsoft DOS networking drivers which
allow me to access ethernet from Win3.0.

Would WFWG be a better choice? I think only my
5.25" disks are still good for WFWG. How to do?

Any other suggestions? ke7gh@primenet.com

4832. SVGA Switches/Cables?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-22 00:00:00 UTC
From: ke7gh@primenet.COM
Message-ID: <01BBA8BF.F012BB80@ip145.phx.primenet.com>
Source record: 193745

Purchased a low cost VGA/keyboard switch
with some 15-pin cables. The cables are
"cheap" and do not have 3 coax (for each
color). Predictably in SVGA mode, video
is somewhat degraded...questions:

1) would the more expensive coax VGA cables
be better? by how much? perfect?

2) can switching sources of video with SVGA
monitor on cause any damage to board or
the monitor?

3) does the switch itself (not using coax
inside) itself cause any degradation?
Does NOT "appear" to, but difficult to
tell really?

4) are such switches a good idea? trouble?

Would like to be able to share one monitor
and keyboard with laptop from time to time.

Any other ideas? ke7gh@primenet.com

4834. Info needed on an HT power supply

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-22 00:00:00 UTC
From: spector@zeitgeist.com
Message-ID: <7mpm1fw6.fsf@wintermute.ny.zeitgeist.com>
Source record: 193747
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

Hi!

I'm getting back on the air after a number of years of inactivity...
I would like to use one of my old HT's (a Yaesu FT-411) as the radio
for a packet station, but am in need on a power supply for it.

Years ago, there used to be a company that made a base-plate type of
contraption for HTs that one could snap the HT on to which had an A/C
power supply in it. Unfortunately, I cannot remember who made the
thing. A look through QST/73/CQ didn't turn up anything interesting.

Can anyone give me some pointers as to where I might fund such a beast
for this rig..?

Any advise/experiences would be greatly appreciated!

Please reply via email, and I will summarize to keep the bandwidth
down on the list.

regards,
David

TO>>
TO>> Thanks, Bob WN3K

TO>Hello Bob,
TO>I have been running an MLA-2500 for several years now.(although I am not
TO>a heavy user) I would say that I am a LIGHT user of the HF bands and I
TO>don't run the amp except when I need it.
TO>I have never had any problem with the MLA-2500.
TO>It will give me 1500 watts out on all bands with 100 watts drive and
TO>that's with less than 100 mills of grid current.
TO>The only problems that I have heard of with the MLA-2500 is that you
TO>need to be very careful and not exceed the 200 ma grid current rating.
TO>The MLA-2500 uses a pair of EIMAC 8875's.
TO>The tubes are quite expensive these days so I hope mine last forever. I
TO>would guess I have had mine for 10 years now and it still has full
TO>output. I haven't seen any change sense the first time I ran it.

Just in case your 8875 bottles quit, there's an article in the Summer
edition of Communications Quarterly on replacing the 8875s with Svetlana
4CX400As by B. N. Alper, W4OIW...who, not coincindentally, works for
Svetlana, a Russian tube supplier. Claims the Russian tubes are less
expensive at $140 than the EIMACs, total cost of conversion at $350.

In my garage, I have some LH Research switchers model # MM-11. 115/230 VAC input, 5 volts @ 75 Amps! single output. I have probably 20-30 of these beauties! Like new! For those not familiar with LH Research, they make very rugged reliable power supplies that barely get warm at full load! They sell for hundreds each new. $125 each + shipping.

For you amateur radio operators out there, these can be hooked up in series to run those HF rigs. I know someone who ran 2 (husband & wife's HF rigs) at the same time, off the same switchers they placed in the attic between their shacks!

Hi Ted--

For a review of the AEA 6-Meter antenna, see the latest QST. If you really want to have fun on 6-M SSB, my advice is--do it right the first time and get a yagi. Even a small 3-element close-spaced array will be so far superior to anything else you could install, there's no point in going throught the exercise of doing anything less! Good luck!

>Have built/fixed numerous ISA/VLB/PCI computers,
>but never opened a laptop before, so I have a few
>(hopefully) simple questions about my T1910 mono
>laptop (486SX33 4Mb 200Mb):

Is this a Toshiba?

>1) how to add numeric co-processor?

You could if there is a co-processor socket. 486SX co-processors are
expensive because it is a full 486DX with a different pinout. It detects
if there is a 486sx processor and shuts it down! I have seen
motherboards that has circuity to fool the 486SX "co-processor" into
thinking there is a 486SX processor (so you buy just the "co-processor").
Adding the co-processor will decrease the battery life.

>2) how to add 4 Mb more RAM (to 8Mb)?

You would have to get the correct memory module for the laptop. Kingston
also sells laptop memory for different laptops.

>Have an older 10bT PCMCIA card in it which I use
>with the Microsoft DOS networking drivers which
>allow me to access ethernet from Win3.0.

You have to check to see if the card is supported. There are some
"classic" designs like a NE2000 that are still supported.

>Would WFWG be a better choice? I think only my
>5.25" disks are still good for WFWG. How to do?

It might be since you disk space is limited.

HEWLETT - PACKARD 805A - Slotted Line - $400
Covers from 500 to 4000 MHz (minimum frequency
determined by useable length of 14 1/2 inches).
Tunable probe provided for entire frequency range.
Impedance of 50 Ohms.

MILITARY TS488A - Echo Box - $695
Covers X-band radar (8990 to 9600 MHz) range. Complete
with all accessories, such as horn, adapters, etc.
Radar manufacturers recommend this unit.

BOONTON ELECTRONICS 42B - Power Meter - $595
DC output linear with power. 1 nW to 10 mW
(-60 dBm to +10 dBm) (7 ranges). Operates over the
200 kHz to 18 GHz range frequency range depends upon
sensor used.

HEWLETT - PACKARD 8699B - RF Plug-In - $895
Maximum Leveled Power: >20mW (100 MHz to 2 GHz),
+6 mW (2 to 4GHz) Frequency Accuracy: ï¿½10 MHz PIN
Leveled, Type N connector. All solid state unit,
designed for use in the HP 8690 Mainframe. Covers
100 MHz to 4 GHz frequency range.

HEWLETT - PACKARD 8692B - RF Plug-In - $450
Solid-state unit, Covers 2.0 to 4.0 GHz range,
40 mW output, PIN leveling, Type N connector

HEWLETT - PACKARD 8696A - Sweep Generator Plug-in - $4000
Frequency coverage of 18 to 26.5 GHz when used in a
HP 8690A or 8690B Maximum leveled power is greater
than 10 mW Residual FM is less than 200 kHz peak
Spurious harmonics are down 20 dB. Nonharmonics are
down 40 dB. Grid leveled BWO's achieve power and
leveling control.

WEINSCHEL ENGINEERING 70 - Precision StepAttenuator - $295
Two drums, 0-60 dB in 1 dB steps. 4 watts maximum
power, 50 Ohms impedance.

>
> Jay Farnham (Frodo@Webbernet.net)

All decent solder tips will be plated or clad with iron. Iron is insoluble in tin, copper will quickly dissolve when the iron wears away. So far as I know, virtually all tips will be copper base (conducts the heat) with iron cladding, then plated with nickel to permit tinning.

As far as the Wen tips, I'm not familiar with them, but there is a company called Plato who makes good tips for many types of irons. Check out:
http://www.marshall.com/pub/plx/sold/pgplx01a.htm
Marshall Industries is a good source for electronics production supplies, they will take a credit card order. OTOH, I have an almost unreasonable aversion to Radio Shack, myself.

I just stumbled onto one of these; offered for $550, perhaps less.
Question: How old are these beasts? There seemed to be a LOT of
birdies at the low end while I was playing around -- I couldn't
check the entire freq range, but...

How about intermod/overload problems?

Any mods to look out for or even check for?

Any idea on filter availability for this thing?

Any info on this -- pro or con -- would be greatly appreciated!
I have to make a decision early next week.

Regards,

Listen to the CW identifier on the repeater, look up the callsign at
QRZ.com, and contact the person. I assume the "utep.edu" is the
Univeristy of Texas at El Paso (that's the only location info I
can see in your posting). Since each Cactus system is locally
owned and operated, each has it's own membership requirements.

Help!

I ride a motor bike and would like to operate two wheel mobile.

I've already got Speaker and mike mounted into my helmet for
an intercom, and would like to use them for my 2M handheld,
the only problem is how to operate remote PTT from a switch on
the handlebars of the bike?

The HT is an ICOM IC2SE and I imagine the set up to be:

```
Speaker >O========|----|======- 3.5mm plug
| ? | Icom IC2SE
Mike O|========|----|======- 2.5mm plug
1
|
PTT
Switch
```

The only problem, what goes in the box to switch the
ICOM from Rx to Tx?

Any advice welcomed.

Dave Cripps G7IDB hopefully /M on a BMW R80RT!

4867. IC-706 a bad radio !!!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-22 00:00:00 UTC
From: ea4abb@linux.ea4abb.ampr.ORG
Message-ID: <Pine.LNX.3.91.960922135350.2333B-100000@linux.ea4abb.ampr.org>
Source record: 193866

Hello everybody and many thanks to read this mail...

I have bought an ICOM IC-706 for 3 months ago and I have a lots of problem with it. In june, 1996 I bought this radio and I installed it the same day. I works well only for 30 minutes. After these 30 minutes the radio output power on HF bands is very low, about 10 W on 10 meters and 0 W on the rest of the bands. On 144 the radio works nice. I had to go to the shop and after 15 years they decided to give me a new transceiver. This new IC-706 worked nice for 15 days. It has the same problem as the first IC-706 I had, the power output on HF is very low, only 10 W on 10 meters and when I gto down on the bands the power is lower !!! At this moment my IC-706 is again there to be repaired but they didn't found the problem. They says that the problem is on the filters...but they didn't know how to solve it ! At this momment the radio is from the beginning of July there. I have bought this radio on june and it only has been in my home for 20 days !!! Now, ICOM SPAIN in Barcelone they says that they are going to send me a new ICOM IC-706 but I think that I am going to have the same problem ! I know more friends which had the same problem and what they do is buy a YAESU o KENWOOD radio because ICOM in Spain has a very bad services !!! I don't know how does ICOM works on another countries but in Spain it has a very very very BBBAAADDD services !

If you had the same problems with the IC-706 and know how to solve it please send me a mail.

Many thanks for reading this mail, I hope to solve it as soon as possible. Someone send me a mail that changing a chip-capacitor in the filters solve it but which capacitor ???

73s de Rob, EA4ABB

****** DON'T BUY ICOM 706 !

Using an Alinco DX-70T that puts out 10w on 6meters SSB/CW and a Cushcraft AR-6 vertical, I have worked into the U.S. midwest, southeast and central southwest during Sporadic-E openings. This is a very modest station setup for 6 but it does provide some fun during band openings.

4876. WANTED: power supply & dual band amp

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-23 00:00:00 UTC
From: Ron in Seattle <ron.in.seattle@pobox.com>
Message-ID: <3246CBED.136A@pobox.com>
Source record: 193675

I am looking for a power supply with more than 15 amps and an amplifier for the 2meter/440. here's my list of stuff for trade:

-Phone/Modem/Fax/Sound Card: Diamond Telecomander 3500XL Professional Voicemail System, 28.8 Internal Fax/Voice/Modem, CD Quality Multimedia 16-bit Sound, Full-duplex speaker phone, Jumperless Automatic Installation. Soundblaster compatible. Midi/Joystick port, $145

-Video Card: PCI Movie Video card, VideoLogic, 2 meg onboard Vram, 16.7 million colors, Weitek Power 9100 graphics controller, works with Windows 95 (or Win 3.1) refresh rates up to 120 hz, full screen movies, ideal for CD multimedia titles, 16x faster Windows performance, 24-bit true color, resolutions up to 1280x1024, upgradeable with a VESA Media Channel (for video conferencing, mpeg playback or other). $120

ELECTRONICS
-Power Supply, (Dynascan Corporation) BK Precision Model 1610, 0-32 Volts and 0-1.04 Amps, Coarse and Fine Volt dials, hi-low current switch and dial, output for positive, negative and common ground. $75

-Power Supply, Radio Shack, converts 120 V-AC to 12 V-DC. New in box. $25.

-2 meter handheld, Radio Shack HTX-202, New in box, never used! Comes with standard NiCad battery pack, and empty battery pack for rechargeable or disposable AA batteries and AC adapter ($259.99 new). ALSO has extra never-used NiCad pack ($39.99 new) and Speaker/mic ($19.99 new). Receipts for $346.20. Asking $215 for bundle.

-2 meter mobile, Radio Shack HTX-212, new in box, never installed, never used, 45-watt, 2M FM mobile transciever with intermod-fighting receiver front-end. Built in CTCSS encoder and decoder, DTMF page with group calling, 6 DTMF memories, 30 memory channels, extended 136-174 range, MARS/CAP capability. New for $349.99 (receipt for $378.69), asking $215.

-Car CD Changer, Pioneer 6 CD changer. Uses standard Pioneer CD magazines, comes with at least 3 magazines. Works great. Must have a Pioneer receiver made to control the changer. Asking $145.

-Camcorder Light, AC or DC, Harwood Series V-150AC, $20

-TV, B/W 13", works great. Clear picture. Older model. $15.

-TV, Color 15" RCA, great picture, very reliable, older model, works perfectly. $25

-Radio, receives AM/FM/TV, General Electric Model 7-2930B, earphone jack, uses 4 AA batteries or included wall cord. $10

-Radio, receives AM/FM/TV & Weather, Emerson Model PM3909, earphone jack, uses 4 C batteries or included wall cord. $10

-Remote Control Pickup, Nikko brand, custom military paint job. Looks great, runs perfect, needs no work. 2 channel full function remote 27mhz, low & high gear, two 7.2 Ni-cad batteries, quick charger. $35.

-Antennae, cell phone, "On Window" 5 dB Gain Cellular by Mobile Mark (model OW-5-900). $5.

-Wire & circuit tracing system, Brady Pathfinder 12-A, Can identify 12 circuits at a time. Use simple procedure to eliminate time and cost of retracing when re-wiring provide extra margin of safety. for Perfect for tracing phone lines, auto wiring, antennae leads, much more. Works perfectly. Use imagination :) $45.

-Coffee Maker, Mr. Coffee 12 cup, black, very clean, with filters. $5

-DustDevil Plus vacuum and attachment kit. $22

MISC
-Coat, Original Australian Outback Oilskin Coat, Medium, black, New for $165, Asking $65.

-Flight suit, Military issue CWU-27P Polyamide high temperature resistant, sage green. Size 36-R. Great condition. New for $125, Asking $20.

SOFTWARE
-PC Study Bible 1.7 for Windows on 3.5" disks with the following add-ons:
1. New Exhaustive Strong's Greek-Hebrew Dictionary and Englishman's Concordance, 2. Definitions from Thayer's Greek Lexicon and Brown-Driver-Briggs Hebrew Lexicon 3. Interlinear Bible
4. Living Bible 5. Treasury of Scripture Knowledge 6. Matthew Henry's Commentary 6. Bible Maps ....Asking $70 for bundle.
-Corel WordPerfect Suite 7 for Windows 95, 32-bit Office, Graphics & Internet Power. Corel WordPerfect &, Corel Quattro Pro 7, Corel Presentations 7, CorelFLOW, SideKick 95, AT&T WorldNet Service, Netscape Navigator 2.01, Dashboard 95, Envoy 7, 150 fonts, 10,000 clip-art images on one CD Rom, never opened. Asking $75.
-ECCO Pro 3.0, Personal Information Manager, calendar, phone book, dynamic notes, outlines, folders, "shooter," and more for Windows on 3.5" diskettes. $32
-Romantic Adventures, A practical and fun software package that will help you manage and improve your intimate relationships. Complete with romantic ideas, a journal for tracking, helpful hints. New for $58.01. Asking $15.
-Diet, Menu Planner for Windows on CD, $10
-Diet, Weight Loss Planner for Windows on CD, $10
-Diet, Executive Diet Helper for Windows on CD, $10

-Game, TerraNova "Strike Force Centauri" 1996, $18

JEWELRY
-Ring, USMC Diamond/Gold/Onyx men's, 10k & black onyx with 1/3 k. diamond, Jostens, lifetime warranty & re-sizing . (new $950) - $375.
-Watch, Military Field Watch, stainless steel, black face, quartz accurate, water resistant, web black band with leather uppers and lowers. Shows day and date with second hand. New for $89, asking $22.
-Watch, Swiss Army "Wenger S.A.K. Design" stainless body with white face and black leather band. Displays military hours, shows date, second hand. Water resistant 100 meters. New for $119. Lens is scratched. Asking $25.
-Pendant, Pewter Raven pendant, 1.25" round two-sided, hand carved. $15
-Pendant, Pewter Raven pendant, 1.5" round single-sided. $15
-Pendant, Pewter Raven pendant, .8" x 1.25" rectangular single-sided. $15
-Pendant, Pewter Raven pendant, 3.5" two-sided. $15
-Pendant, Silver 1" Raven holding .5" onyx marble pendant, single-sided. $15
-Pendant, Silver globe w brass continents chime pendant. (Chimes inside of ball). $18

POLICE/SECURITY/GUARD Equipment
[All duty gear is NEW and matched set of Nylok 950 Denier weave]
-Case, for cell phone, for duty belt, (for Motorola flip phone), foam padding and Velcro flap, uses "rip-offs" clip. (Paid $17) Asking $10.
-Flashlight, MagCharger flashlight (Made by Maglite), comes with AC & DC charging, five cell battery stick, high-powered halogen bulb for 30,000 CP, lifetime warranty, no scratches, no damage, new in box. (Paid $150) Asking $75.
-Jacket, Hidden Agenda Jacket, Supplex (tear resistant) Nylon Jacket has hide-away custom ID panels, looks like an ordinary black jacket, but simply reach up and pull down the hidden badge flaps (over right & left top pockets and on back). Panels are replaceable and can be customized. Size is 36-39. Great condition. (Paid $125) Asking $65.

CHRISTIAN MUSIC CD's: $6 each
-Johhny Q. Public "Extra-Ordinary"
-Grammatrain "Lonely House"
-Acappella "We Have Seen His Glory"
-Hosanna Music, "Glorificate" Praise in Spanish
-Julie Miller "He Walks Through Walls"-Glad "Floodgate"
-First Call "Sacred Journey"
-Darrell Mansfield "Get Ready" & "Give Him Your Blues"-Lanny Cordola's "Of Riffs and Symphonies"
-Lost Dogs "Scenic Route"
-Larry Howard's "Cornerstone Blues Jam"
-Bright Star Male Chorus "He Will Answer Prayer

Thanks for glancing through all this stuff. Everything is in good condition. I'm selling everything I can live without for student loans.

Feel free to E-mail me at ron.in.seattle@pobox.com or leave a message at
(206) 997-7871.
Thanks in advance.

4879. Power Supply problem in TS700A

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-23 00:00:00 UTC
From: "Dennis Breeden"
Message-ID: <524rhu$f72@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 193769

I have a Kenwood TS700A with a TS700S power supply. This is a factory mod for the model. It was completely non functional. I replaced Q1-10, C1, 2, 5, 7, 8 and 16. +9 Volts is working, +20 Volts will not go above 17 Volts on AC and 13 Volts on DC. On transmit it drops even lower. Any and all help needed. Thanks, D. Pat Breeden, WB3KUM

Hi DJ,
Our company, PAR electronics manufactures a number of filters that may be of help. We make a deep notch filter for 2M that has 75 Ohm in/out, less than 1 dB loss @TV freqs. The efficacy of the filter assumes of course that your problem is front end overload of the television rx or any amps/preamps. The filter MUST be placed before any amps as these are the most likely source of overload. E-Mail me if interested.

73, Dale for PAR electronics

From: Wave@mindspring.com
Message-ID: <524kfd$r90@camel0.mindspring.com>
Source record: 193775

How do I store split frequencies in the FT1000MP???
I just received their latest brochure and it talks about storing
both vfo frequencies. Their manual appears to only mention the capability of
storing vfo A. IS THIS ANOTHER CASE OF FALSE ADVERTISEMENT? The same thing
happened with their advertised -6dBm out of the transverter port and actually
-31dBm coming out..

Can anybody tell me what the CAP/MARS mod does to the radios specs ?
I know they only guarantee the ham bands, but what does the mods do
to the sensitivity, selectivity etc.

How about the euro mod ? - same question ...

Also I hear there is a win.ini line to add to make the ADMS-1C
go wide without the hardware (caps/mars) mod ??

Hello!
Our club has recently put an ATV repeater on the air, and some
of us are using the Rabbit TV receivers to see the repeater.
Our output is 923.250, and these receivers tune the repeater
excellent. Our source for these units has dried up. So, we
are looking for another source. Any Help would be appreciated!
If not the Rabbit type, something else! The reason for using the
Rabbit, was the price of 25-30.00. Others like PC electronics
which will work also, are far more expensive for the average
Ham or john Q public to invest in. HELP PLEASE!!!

tnx es 73, -=MIKE=-

> For a review of the AEA 6-Meter antenna, see the latest QST. If you really want to have fun on 6-M SSB, my advice is--do it right the first time and get a yagi. Even a small 3-element close-spaced array will be so far superior to anything else you could install, there's no point in going throught the exercise of doing anything less! Good luck!
>
> Rick K1BQT
>
Rick:
Why is it that when anyone asks a question about using an omni antenna on VHF most of the time they are told to skip the omni and put mup a small beam? Not all of us have the room to put up and swing a beam. I run omni's (a Ringo Ranger and an Eggbeater) and have a lot of fun with them. In each location I have mechanical blockage that would limit a beam from turning more than a few degrees.

From: wa8rfh@aol.com
Message-ID: <5264ok$aes@newsbf02.news.aol.com>
Source record: 193791

Contacted Mirage about this. They told me to set transmitter on frequency where I plan to operate most (in this case around 50.130) and retune amplifier for maximum output (by adjusting all six variable caps).....I did this and I now have maximum power at the low end of six meters.....(of course it drops off 30% up around 52.500).

I owned an R71a for about 3 years and I picked it up at a hamfest for
$550. The one I had was OK, but it was very bad when trying to tune near
strong stations. The AGC had a tendency to block out the nearby
frequencies. The one I had also sounded like it was off frequency. When
tuning a station, say on .700, the audio sounded better on .708. Other
than that, I liked it. I now have an NRD535d. I like it MUCH better.

Hello everybody,

tks fer reading this msg.

I`m looking for any mods for the Icom Z1-handhelds.

There are only the following mods in Europe / Germany known :

RX extention (via Buttons/Software)
Cross-peater-Function (~)

I`m seraching for

RX-TX-extention (Diode cutting ??)

and if known

9600 Bd - mod (Pionts for the RX / TX - contacs)

or more - maybe I`ve forgotten something interest.

Pse mail direct to me and / or news...

I will mail it for the other users in the German PR-Net

4908. Tell Me About Linux?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-23 00:00:00 UTC
From: ke7gh@primenet.COM
Message-ID: <01BBA96C.A6E7ECC0@ip21-121.phx.primenet.com>
Source record: 193798

Linux is quite popular, but I'm just a bit
confused exactly why it would be a good idea
for me and what special components it would
take to get running? (I like "adventures.")

I sold my Mac+ which was getting little use
lately. Now, I need to find a better use for
my mono Toshiba laptop. Have heard some are
running Linux on laptops, but heard few details.

What I have:
1) Toshiba T1910 486SX33 laptop 4Mb/200Mb
256 color VGA w/monitor, 2 PCMCIA slots
2) Toshiba 3301 SCSI sgl spd CDROM (external)
3) WD SCSI HD 200Mb (external)

What I may need (cost? source?):
1) Linux CD or download s/w
2) inexpensive PCMCIA SCSI interface
3) optional memory upgrade (to 8Mb)
4) optional 486SX math coproc
5) old 10bT PCMCIA NIC may not be compatible?

Questions:
1) Why would I want to do this exactly?
2) Is the laptop compatible?
3) Which PCMCIA SCSI interfaces are compatible? How expensive?
3) Which PCMCIA 10bT NICs are compatible? How expensive?
4) Possible to have dual DOS/Win3.0 and Linux boot?

I am VERY curious to hear details about this "adventure."

ke7gh@primenet.com

snip
> -- Roberto
>

Hi Roberto,

If two radios have given you the same low power output problem, I would suggest looking elsewhere for the problem. Sounds to me as if the radios may be going into protection mode. Have you tried running the radio into a 50 ohm dummy load? Does it develop full power, then? Are you sure your antenna system has not developed a short or open condition?

Regards, Ken (WA6TTY)

From what I remember, just connecting a switch in series with the mic
should do it. You may find you need a resistor in parallel with the mic
(try a 2k2).

Look under "Adhesives" in the Thomas Register.

You might also try some of the electronics industry suppliers'
listings that are published by the trade magazines.

You can get the goo you want, but it isn't cheap -- and
you may have to buy a lot more than you really need.

I have tryed to warn people. They think I am paranoid, or out some money or something?? One of the folks in Texas was actually caught after receiving some software from someone on the internet, SHORTLY AFTER. I wonder how they found out so quickly. Surely Moto wouldn't stoop so low as to actually send people software and then bust them. Naw, I am probably just paranoid. I am sure they don't go to Dayton, get a radio programmed, ask for a name for "future" business, and then check there license data bases to see if you are licensed. This is certainly NOT the place to score some illegal programming software. Try a ham club meeting or something a little less public!

>list prices twice the going value!! 73 K7RR
>

Somehow your message came in with a strange subject line. Even though your main point is correct, that this IS NOT a proper group for posting items for sale or wanted, people posting ads may not read it.

I didn't know if you knew the subject line was incorrect, so I thought I'd mention that.

Why doesn't the FAQ list automatically get posted to everyone every month or so? Other groups do this, and that might cut down on the for sale stuff, especially from dealers.

Any number of receivers were commonly used, such as the Hammarlund general coverage HQ-100, HQ-170, HQ-180, etc.; the Drake 2B; many Hallicrafters and National models. A lot of vhf work during the years that the TX-62 was produced was accomplished using a receive converter for the vhf frequency along with a good hf receiver, which was used as the i.f. and subsequent audio stages. War surplus gear was also used, such as the BC-348, but that wouldn't reflect the vintage of the TX-62. Ameco made a series of "Nuvistor" (very small metal tubes) that worked well at vhf. They made 6, 2, and 1.25 meter versions. I used a homebrew nuvistor converter on 6 meters.

You are correct about the vfo covering all three bands, and the TX-62 covering only 6 and 2 meters. Their marketing and engineering departments were probably out of sync. Shortly after the heyday of the TX-62, a lot of the vhf interest shifted to fm. I don't recall the octal plug. A lot of rigs used octal tube bases and sockets as cheap connectors for power supplies, and unit-to-unit control connections.

I am currently using an R71A for my main amateur RX.
I am generally pleased with its performance on the ham bands.

I run SSB and also operate rtty and cw. I also use it for receiving
slow-scan tv pictures and wefax transmissions.

The units came out over 10 years ago.

The rig generally is a good performer on the ham bands. It holds
up fairly good under strong signal conditions. The readout is to
the nearest 100Hz, but the unit actually tunes in 10Hz increments
and is very stable.

VERY IMPORTANT NOTE:

There are 3 different versions of this rig. The earily versions have pass band tuning. there is a CONCENTRIC knob on the right hand side labeled PBT/NOTCH. (early 80's?)

Some later versions eliminated the pass band option. Their single NON-CONCENTRIC knob is labeled NOTCH. (late 80's models I think)

Due to many complaints, ICOM again installed the pass band tuning on its later rigs. I have one of these (1994) It has concentric knobs, but the label only reads NOTCH!

I would avoid the version without pbt! be sure to ask about the knobs!

Features:

The freq range is 100Khz - 30Mhz continous

Modes are AM, FM(option) USB, LSB, RTTY, CW

The unit has dual vfo's and 32 memorys. You can have a memory recalled, and tune up and down the band without having to go back to vfo mode. This will not effect whats stored in memory. You can also write from memory to vfo or vice-versa.
Unit also has some scanning functions.

The unit can be powered from an external 12v pwr supply.

It has a record out jack on the front, and a squelch operated relay on the back for controlling a tape recorder. There is no clock/timer however.

Also has a mute line for interfacing to a separate TX through a external T/R relay. The antenna input is not disconnected from the unit when in MUTE so I wired an external T/R relay to do this.

Unit has direct keypad entry of frequencys, along with vfo knob.

Bright blue fluorescent display with dimmer switch.

Unit has built in preamp.

Has Fixed 20db attenuator.

Has variable noise blanking control with wide or narrow blanking width also being selectable.

AGC selectable (fast, slow and agc off)

The unit is built like a tank!

Unit is fairly easy to work on.

Filter question:

I believe the filters are still available new.The 9Mhz filters are very common on the used market. Unit comes stock with both an SSB wide

and narrow filter with room for an optional CW filter.
It also has a 455Khz SSB filter which can be upgraded.

I have the optional 455Khz filter as well as a 250Hz cw filter.

As my unit came with the optional 455Khz filter, I am not sure what
the going rate for a used one is. AES had them listed at $179.00.

I did purchase the 250Hz filter from a guy in the radio.swap for
$50.00 and have seen 500Hz cw filters for about the same price.

Other options are:

IR remote control (mine came with. Not necessary!!)

High stability osc (mine came with, but I don't think its necessary)

FM option(unit DOES NOT receive 88-108Mhz FM. 100Khz - 30Mhz only.)

computer control interface

Dislikes:

No clock/timer built in

Audio quality could be better.
I think there are some mods for this however.

AM 455Khz filter too wide! (this can also be replaced)

The unit has a somewhat high amount of internally generated
noise. (phase noise?) This may or may not be a problem to you.

I do some weak signal work (Russian ham sats on 10 meters)
and the noise sometimes gets in the way.I have a Kenwood TS-120S that
is much quieter than the ICOM, but it isn't nearly as selective.
The Kenwood is not synthesized and I think is only double conversion.
The ICOM is a quad conversion rig. Its hard to beat an analog
rig in the category for being quiet!

Another potential problem is that if the internal memory back up
battery ever fails, you will have to send the rig to ICOM to reload
its control software!! They did this so rigs sold in Europe can be
programmed to only receive certian portions of the sw bands. These
rigs have an E in their model numbers. (R71AE I think).

I believe a company called WILCO makes a replacement memory/ battery
upgrade so this can't happen. I think you can also get more memory
channels by using this upgrade.

I have read that the ICOM techs have memory boards over 10 years
old and have never had one loose memory due to a failing battery.
Still, every one owning one of these rigs needs to be aware of this
potential problem!

There are several mods available through different sources for the rig. QRZ on the web has some of them. I believe there are also books on tweaking the R71A.

In fact I recently came up with a mod to help me ferrett out the weak signals buried in the heavy QRN on the lower hambands. It involves converting the squelch control to work as a variable IF gain control only on the first IF amp, which is normally controlled by the agc and rf gain like the rest of the IF strip.

This rig has the problem of heavy noise pulling the agc down and masking the weaker signals due to the IF strips gain being lowered too much. The RF gain control (really an IF gain for the whole radio) is not effective under these conditions. You can turn the agc off but then you really get 'blasted' if a strong station comes on! ouch!

This mod acts like a variable rf attenuater to keep the signal level down so the if strip can run at maximum gain and then agc only if really strong signals come in. Again the 1st IF amp is now manually controlled by using the R71A squelch knob.

My brother has an unmodified R71A so I was able to do a/b comparisons and the mod really works!! It works so well that he wants me to modify his unit!

I can post the details for anyone interested in doing this. Its fairly easy to do.

Note that you will loose the variable squelch control with this mod. In my case I didn't use it anyway so no loss.

I hope this answers some of your questions concerning the R71A !

I have for sale a small quantity of GE MVP mobile radios currently on 453 Mhz. They are the high power model, 21-35 watts. They are four channel capable and come with one set of elements. They have PL encode with a 192.8 versatone included. Tested good. No accesories. Great for conversion to a repeater.

I'm asking $99 each or 5 for $400. I'll pay the shipping UPS surface.

Email response or send a check to:
Eric Homa
P.O. Box 334
Applegate, CA 95703

Thanks

What a thoughtless thing to post on a newsgroup for discussion of
equipment.

Not only is this the wrong group for postingf any sale item, it is for a
business. If everyone with a business was this rude, newsgroups would
quickly become useless.

4946. Info: Alinco DX-70 - UPGRADED model

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-24 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <528q9i$ct8@dailyplanet.wam.umd.edu>
Source record: 193690

The DX-70T, of which I am a proud owner, is a decent, compact HF + 6m rig with lots of nice features. It's also "missing" certain things which some people consider necessarily, although I do not.

So what's this about?

Talked to Alinco yesterday evening. The GX-70, which is similar to the DX-70T except that it does 100 watts on 6m, should be available around the middle of next month.

THERE IS NO UPGRADE TO THE DX-70T. If you have one and wish to upgrade it to 100 watts output, you'll have to buy an outboard amp or build one.

The nice lady on the phone couldn't be more specific about differences (do they use a separate RF amp or did they pick transistors capable of operating from 160-6m?, is that ceramic CW filter replaced with an xtal filter) but said that there was no way to upgrade a 10w DX-70 into a 100w GX-70.

The price difference would be roughly $150. That's all I know; she indicated that the basic radio was the same, or at least very similar.

4949. Need Manual for RCA UHF mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-24 00:00:00 UTC
From: Jeff Bertholdi <jbert@mail.dialnet.net>
Message-ID: <32480CD6.2FDE@mail.dialnet.net>
Source record: 193693

HELP!

I need a service manual for an RCA UHF 2 channel mobile. I have two of them and here are the model nubers:

MFBT0-AC21B
MFAT2-AC21B

If you have a manual please get touch with me, I would like to get a copy.

Thanks,

Jeff Bertholdi

Howdee.

I've been looking for a compendium of mods for the Heath HW8 QRP rig.

It's been suggested that I get the book "HW8-Handbook" by the 73
magazine QRP editor. 73 Mag. doesn't have the book.

Can anyone point me to a source OR does anyone have a copy they would
sell?

TIA & 73

Rich Joerger, WB4EHG

Source record: 193697
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment

Getting back into shortwave radio listening after about a 15-year absence.
I'm looking for a good used GC AM/SSB/CW SWR, with the following requirements:

- GC from AM BC to 42MHz and FM BC
- must be portable, and able to be powered by 110v, 12vdc auto and
internal batteries
- internal and external antenna input
- prefer DIGITAL frequency readout

Looking to spend anywhere from $300-500.

Replies email to twhite@cyberramp.net. Thanks.

4954. Thank-you RT Systems

From: stevehan@ptd.net
Message-ID: <5299k7$hsq@news2.ptd.net>
Source record: 193698

I just purchased the FTT-12 for the FT50R and during installment and uploading my old file to the radio it went into the European mode and I couldnt get it back to the US mode. Was getting errors when ever I tried to sent a file to it. I wanted the auto repeater shift over the extended coverage. The strange part was I wasn't trying to switch over to this mode. Not sure how it got switch over.

I made a call to RT Systems, received no busy signals, was not put on hold and we had the unit back working in the US mode in 5 minutes. Dont remember the techs name but thanks again

Great Support!

Looking forward to any possible upgrades with this software.

Steve

Source record: 193700

Brian, if you have Web access, try looking at the Linux Documentation Project home page at http://sunsite.unc.edu/mdw/ - I believe most of your questions will get answered there (the site gets busy some times, but keep trying). If you don't have Web access but have a decent bookstore in your area (e.g., a Barnes & Noble store), you should look for some Linux related books. Some of these books come w/ a Linux distribution CD-ROM; FWIW that's how my brother obtained his first Linux distribution.

As to your question, "Why would I want to do this exactly?", I think you'll have to do some research & soul searching. If you want a Mac-style OS (& I don't think you want such a beast), then Linux isn't what you want. If you want to learn about a UNIX-like OS, or port UNIX applications to a PC, or want a multitaking, mulituser OS, etc., then Linux might be of interest. I've noticed several Ham related Linux applications mentioned on the Web, and perhaps this trend may continue.

Good luck -

TGB

A cursory look appears that receiver sensitivity drops off at 220 MHZ
but the transmitter spectra looks clean from 136-220.

The [AllowAnyFrequency]=0 parameter in the win.ini file doesn't appear
to do anything. Try running WFT50.exe /DEBUG. If you happen to have
access to the software for programming the Yaesu Vertex (commercial)
equivalent of the FT-50 try running it cexxx.exe -m it will ask for
a password. If anyone has a copy of this software they want hacked for
the password send it to me uucoded by E-mail.

Hello. I have an Icom BC-35 AC, 120 volt quick charger that I would like to trade for a 2-meter HT amp. needs to be ran on 4 amps or less(something like the Power Plus HL-35V), as I only have a 4-amp power supply. one with a pre-amp would be nice, too. e-mail me with details.

NOTE: the positive contact likes to stick down. I think this is just because of a bad spring, and is easily put back up by opening the case and pressing up on the bottom of the contact. in english, don't slap the pack down too hard, hi hi. this should be an easy thing to fix.

For more details, e-mail me at Spamsonite@hotmail.com

Sam Bradshaw,

>panel. Firstly, what does the orange light mean, secondly, does anyone
>know how I make a button 'monitor' (squelch defeat). I am puzzled.
>--
>Neil Hosker G8UEK

Neil,

The orange light means that there is no PL active for that channel until
you switch channels, turn the radio off, or press the button again. If you
have a scan channel, making the orange light appear deactivates PL for
ALL channels scanned.

If you are looking to make one of the buttons produce the 'white noise',
the radios that I have received have come programmed that way, and I had
them reprogrammed to other functions. I'm not sure of where in the
programmin software you need to go to set this for squelch defeat, but
I will try to find out.

Email me if you don't hear from me in two days.

4973. Japanese Hams! Can you help w/Mod for C701 for US band !?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-25 00:00:00 UTC
From: Ron Curry <recurry@insighttec.com>
Message-ID: <01bbaaa2$e4c59b00$5ba19ecd@expressp5.insighttec.com>
Source record: 193622

If any Japanese hams monitor this group do you know what the jumper or key sequence is to widen out the TX on the Standard C701 to cover the US ham bands? I'd be forever in your debt. This is a really cool little radio available only in Japan covers 144mhz, 430mhz and 1.2ghz bands - about $310. Works great on 1.2ghz but 144 only goes to 145 and 430 to 440mhz. Better yet a mod to allow transmit on 902-928mhz would be great as well

> that, the power supplys don't force 15 more amps into the transceiver
> right?
> Once again, I really appreciate the info, given to a new ham.

You're OK, David - the current drawn by the transceiver is determined by the transceiver (as long as the power supply can provide it). The current rating on the power supply relates to the maximum that can be drawn by equipment connected to the supply.

Just make sure that the voltage is set correctly if you have a variable voltage power supply. Unlike the current, this has to be set to the value needed by the transceiver.

Myself, for the sake of economy I would only get a power supply a bit above the maximum you need - 35 Amps seems a bit excessive for a rig that needs 20 Amps for full output - unless there is little difference in cost or money is no object.

Best wishes, and enjoy yourself.

Net/Mac is public domain for TCP/IP and Host Master Mac seems to be
about the best for Kantronics boxes - way less than $100.00. MacAPRS
is good too but your Mac+ will need lots of memory.

A trip to my home page reveals there are many good files and programs for
amateur radio operators that want to use Mac computers.

<http://www.mv.com/ipusers/wd1v/>

* Ham Radio Test Simulators - where you can go from Novice to Extra Class
practicing the actual tests right on your Mac! Check out the info on the
new NO CODE license or scramble your neurons and learn Morse on the Mac
too!

* Macnet Roster - a virtual "Whos Who" HyperCard stack with more than 750
entries giving the names, addresses, phone numbers, of radio operators
all over the world that are using Macs. Check out their projects and
their passions and put a design on your Mac Radio future when you see
what neat things are being done!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of
the latest - much of it with FTP links so what you see is what you can
get with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lot of links to great Mac FTP
sites for radio, electronic engineering, and similar data.

My father, now deceased, bestowed the referenced receiver on me. He was W5WSN, Ft. Worth.

While I have interest in amateur radio, I have neither the talent or inclination to participate. Computers are really too much for me.

Can anyone tell me if the receiver has value, how much and who would one sell the unit to?

Help is appreciated.

> --
> Neil Hosker G8UEK

Sounds about right. I do:

Speaker >O--------------------> 3.5mm jack
/----
Mic O|------o ^--#-------> 2.5mm jack ('tip')
\--------------#-------O 2.5mm jack ('shield')

Seems to work fine. the ## represents a 2K2 resistor in most cases
although with ICOM I believe a 3K9 is the recommended value if my memory
serves me right! The resistor is placed between the tip and shield of
the jack plug...although it has been some time since I wired one. If it
goes to transmit and stays transmitting, move the risistor to the other
side of the switch - closer to the microphone, but I'm pretty sure the
above is OK!

>
>Brian

Best I can tell, one of the lugs on the battery carries straight through the pack, without connecting to the nicads. If you take apart one of the AA cell holders it's easy to follow the path. The dc adapter apparently puts out 11 volts (max) directly onto that and the ground pin.

You could make your own 12 volt adapter using one of the cell holders and a regulator, but I think the price on the DC cable was reasonable enough that it probably wasn't worth the bother. Do NOT connect 12 volts (closer to 14.5 in an automotive system with the engine running) directly to those pin - you'll exceed the 11.5 volt maximum rating on the radio and may see smoke.

That's my only criticism of this radio, I really like the radios that allow direct connection to up to 16 volts. But for it's other features, I can live with it.

Kevin, WB2EMS

The problem is that 2 IC-706 ha had the same problem ! We didn't know the problem exactly but some engineer can found the problem in the relay switching filters.

I submit that folks should refrain from answering the survey until Jerry
explains better what he's after.

If he's looking for market research, he wants one thing. If he's looking
for current advice, he probably wants something else.

I doubt that what I bought 25 years ago makes any difference to him at all.
But I could be wrong.

What are you after Jerry?????

Source record: 193643

Hi all,

Last year I've installed an FM-radio on my electrical wheelchair. It was not very cheap, it had a pricetag of over $1000. But it was worth it, at least, that's what I thought, because the music sounded great and the reception was excellent. But oh boy, was I disappointed when I turned on the wheelchair, goodbye music, hello AWFUL reception!! Heaps of interference, the only station I could still receive was a local radiostation in our town, all the other stations lots of interference. Obvious question, is it possible to improve the reception or to get rid of the interference?? I must say, the wheelchair is computer-controlled and it seems this computer causes the interference. Technicians of BOSCH tried to fix the problem, after two hours the only thing they achieved was to short circuit my 24v->12v-transformator! If even technicians of BOSCH can't fix the problem, who can!!??

From: ljubisic@EUnet.yu
Message-ID: <52ca27$5pm@Solair3.EUnet.yu>
Source record: 193647

Hi!

Does anyone know what is difference between Alinco DJ-580 (older) and this new one DJ-582? I saw just one red LED for Tx, and channel display option, and nothing else. Is that all? Is all accessories of DJ-580 (batteries, CTCSS chip etc.) compatible with DJ-582?

Also, I heard that DJ-580 could be programmed to speed-up its autodialer function, so I wonder does anyone knows how? And finally, does DJ-582 have same feature? Anyone tried it?

Please be kind and forward me a copy of Your reply also on my mail address.

Thank You very much on Your understanding,
best regards,

Slobodan, YT1RVS

Do What ????????

5006. FS:DC Plugs:Kenw,Icom,Alinco,Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-25 00:00:00 UTC
From: n2cjj@undefined
Message-ID: <1996Sep25.205000.1698720@undefined>
Source record: 193655
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap

I have found a source for those DC power cord plugs. The ones I've got
have 6 pins, male plastic with metal female (barbed) inserts.

The plug fits most 12VDC HF radios:
Icom 720, 735, 706..and alike, newer Yaesu and Alinco DX70.
Kenwood-TS120, 130, 140..430, 440, 450..850,..TS50,60, 660, 670...and alike.

Make your own power cord yourself, YOUR WAY!
Crimp or solder, long or short, heavy gauge wire, purple with polka-dots...

I'm offering the 6 position plug with 6 inserts for $4 each,
or the deal 3 for $10. All prices include postage in the US.

To order, kindly send a check to:

R. Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: n2cjj@ibm.net

It's a great deal if you use one rig at home, in the car and at work and
are stuck dragging one power cord all over....

I still can't believe AES, HRO and others get $30 for a power cord. HiHi!
n2cjj@ibm.net

> Thanks,
> BillHi Bill,

The answer is- maybe. You need to compute your system noise figure w/o the preamp and then take into account the preamps NF and gain- you will then be able to tell exactly what the NF improvement will be. On the downside, sensitive preamps are also susceptible to desense and/or intermod distortion if your antenna is in a high RF environment.

I'm looking for sources for push masts. For reasons that I don't want to get into, I can not put up a tower. I just want to put up a Force-12 C3 up about 30 feet with a Ham M or Ham 3 rotor. The mast will be in concrete at the base and bolted to the eve (sp?) of the house about 12 feet up. I'm hoping by doing this, I won't have to use guy cables. I'm not sure if I can get away with that.

I know radio shack sells one, but I'm looking for other sources also.

Any help would be greatly appreciated.

Thanks,
Kory

Amazing how fast things change. When we were trying to comprehend Morse, then came business radio, and that made amateur seem silly... then came video and computers and then...

For all of you old-timers that have been electrocuted by the plate voltage in a tube-type 400 mHz transmitter then I submit that we should all get a keyboard and a computer and try out this new stuff. Cyberspace is something to behold if you have never experienced it..

For a sample of the impossible, download the program "Pluckit" from www.pluckit.com.

It finds and transferrs picture files from the newsgroups to your hard drive.

Amazing...

There is no side place to plug it in. There is a DC cable however that you can buy that fits into a cigaretter lighter plug and connects through the ni-cad "indirectly" but that is the only such option they offer that I know of.

Hello,

I followed up by doing a Alta Vista search on T1910 and there is
a specs page. Kingston does make memory for it.

The processor is a 486SL and could very well be soldered in. I doubt
that there is a math coprocessor for it (Toshiba would list it in
the specs or options).

Other information I have indicates some SL processors had FPU, but I
would guess that it would be a 486DXSL.

You could use MSD or another system information program to check.

So dig out the Web Browser and search away.

And there may be reasons why the Icom is cheaper.
The Icom does not have a detachable faceplate like the Kenwood.
I think the TTP mike is an option on the Icom, standard with the Kenwood.
Does the Icom include extended Rx on UHF right out of the box?

I own a Kenwood 733 so naturally I'm a little biased, but it pays to look closely at all the features.

The following radios are for sale from the estate of a friend of ours. The radios are in excellent condition, NO CODS, and price is firm.

1. Icom R-7000 with DC power option, NOT CELLULAR Blocked, Box and manuals for the unit. $900

2. Kenwood TS690S HF/6 meter Transceiver with MC85 Desk Mic. Unsure at this time if it has the AT450 antenna tuner. If it does $1100, if not then $1000. Box and manuals.

3. Motorola UHF 16 Channel MT1000 with DTMF front, rapid charger, and Public Safety Speaker Microphone. $400

4. Motorola Low Band (42-50) MT1000 with rapid charger. $350

5. Motorola UHF 75 watt Micor Repeater (Community) in 7 foot Micor upright cabinet with metering kit. $700, PICK UP ONLY

If interested any any of the above, please e-mail me and we will get in touch. More items to follow as they are inventoried.

Interesting point of view...
You see, Jerry, when I started, as a 14 year old, I couldn't afford to
BUY a rig, so I converted a shortwave receiver to the ham bands, and
then <gasp> BUILT my first transmitter, a cute little two tube 30 watt
rig that was, as the rules required at the time, crystal controlled.

Not everyone jumped into the hobby with a thick wallet, a high-paying
job, and a credit card for getting equipment... some had to build it,
and we learned a great deal from those experiences... and had a great
deal of fun!

: Bought? My first radio was an Oak Hills Research 40M transceiver that

Well I assume you BOUGHT the kit!

First Rig, Heathkit HW-16
First assembled rig - Drake TR-22C
First "NEW" assembled rig - ICOM IC-22S
First "NEW" assembled HF - Ten Tec Triton IV
First "NEW" HT - ICOM IC-2A

The HT is a good story. I ordered it sight unseen from a local ham store as Icom had not released them for sale in the US yet. At Dayton that year (1978 or 79) ICOM delivered about 20 of them to their dealers as display models. It was *the* hottest item at Dayton that year and the line to see it at the ICOM booth streached around the display area.

Since MY dealer did not use display models, he sold it to me Friday! So there I was walking around Dayton with this incredible, small fully synthesized HT on my belt and was stopped by EVERYONE to ask how I got it. That was a fun year.

Have you tried contacting the ARRL? I wrote asking for some reprints of some QEX articles. To my surprise, they sent me complete back issues. The fee was quite nominal.

BTW, the ARRL can supply photocopies of articles from QST. I recently purchased a photocopy of Beverage's original 1933 (or was it 32?) QST article from them. The service was quick and economical.

As a former "Drake Twins" owner (T4X/R4A), I've always been a Drake fan.
However, their TR-7 of the early '80s wasn't up to the competition from the
Japanese rigs. Still, I'd like to see them back in the market.

Hi Gary, name here is also Gary W8PU. I just bought one used for $990 and it was 9 m0s old. I like it just fine, is about the best mobile radio as far as being compact and versitile. It does have a problem when used in crowded bands with a lot of adjacent strong signals (stock filter, attn helps) , the NB tends to distort strong signals (alot of radios do) , and I dont believe the 2 mtr receiver is as hot as compared to a FT2500m I owned. Its a compromise I am sure considering the small size but I have had no troubles with it so far, everone says it sounds good, and like I said its a very entertaining radio on long trips...73 de Gary.

My first transmitter was a Heathkit DX-40 (yes I put it together).
The first receiver was an old Hallicrafters S-20, equipped with a
Heathkit Q-Multiplier. The Q-mult was replaced with a Q-5er (a vlf
ARC-5 receiver tuned to the IF). I was about 12 years old.

I also graduated from CSUN, FWIW.

Source record: 193600

My first radio was built on a piece of plywood, and had a single type 30 tube on it. I remember saving my paperroute money to buy batteries for it. I don't remember the "A" battery size, but the "B" battery was 90 volts. This was about 1953-54.

All the parts were furnished by the ham who lived across the street. His bag was ten meter phone. He could draw the neatest arcs from the plates with a pencil when transmitting. As I recall, the transmitting tubes were war surplus 24Gs. Very impressive to a 16 year old. When he transmitted, the plates turned red. He had QSL cards from different parts of the world. I thought I would like to do that too.

In addition to the type 30 tube, socket, and other components, he gave me a copy of the Radio Amateur's Handbook. "Everything I needed to know", he said. He was right, and its still probably true today. After mastering the 5 wpm, I was rewarded with the call sign WN9COM. Now to build a real rig: As I recall, it was a single crystal controlled 6L6 oscillator on 80 Meters. Now schoolboys don't have much money for equipment. I took a general purpose shortwave broadcast receiver, one with a magic eye tuning tube, added an outboard BFO and tube, and I was off and in the big-time as a ham.

My first 'real transmitter' after getting my General class used a crystal controlled oscillator, followed by a push-pull amplifier on 80 and 40 meters. I think the tube was a 815 running about 40 watts. It had two plate caps, anyway. It used a B & W five pin plug in air coil. Everything was more or less out in the open on the top of the chassis. This began to worry me, because the coil had about 400 volts on it. I added two RF chokes and two coupling caps to get the DC voltage off of the coil. Well, since there was no voltage on the coil, I tried to pull it out of the socket one day while the B+ was still on. When I woke up, I was across the room. I turned the transmitter off, and it took a few days to work up the enthusiasm to see what had gone wrong. One of the capacitors had shorted.

The next transmitter was a borrowed ARC-5 on 40 meters CW. This one had a VFO! One touch of the key and every TV receiver within 3 blocks got a herringbone pattern. I learned a lot about fixing TVI before that one was usable. Did you know that it is really hard to solder capacitor wires to aluminum? Just because our TV was not upset did not mean it was not my fault, even if I was not on the air.

While in the military as KL7BUZ (1956-1957) I used a single homemade 6146 on 20 CW, along with a Hallicrafters S43. I think it was a S43, but that has been a while ago now. What ever it was, it had a 6 meter stage that never picked anything up. That equipment was good for working over 120 countries with a ground plane. Of course, sitting on the top of a mountain probably helped. After discharge and getting a real job in 1959, I bought a

Hallicrafters HT32 and a Hammerlund HQ-180. The HT32 is long gone, but the HQ180 is still setting next to the computer. I don't know why I kept it, or why I keep watching the ham stuff on Usenet either. Maybe someday.....

Dave Hayes ex-W9COM, ex-KL7BUZ

A preamp will help bring some signals up -- but generally only those you can already hear. That is, a slightly noisy signal might become more readable. The best way to get more range at V/UHF is to get an antenna up higher, so that your line-of-sight distance is increased. A gain-type antenna is another worthwhile option, probably better than a preamp. Gain antennas are available in omnidirectional and directional configurations, depending on your needs. Lastly, a high-quality feedline will reduce your system losses dramatically at UHF, alowing more signal to make it from your antenna to your receiver. RG-58 or similar just doesn't cut it at all -- with any substantial length of cable, you're losing more signal in the line than is being delivered to your radio's inputs.

Good luck!

Smart Amateur Radio Operators join their local clubs and find out what's happening in their locale on the various Amateur bands.

After doing my homework (joining 3 Amateur-related clubs, joining the ARRL), I bought a Standard C288a 220mHz HT - which serves my purposes exactly. I have since added a Standard C558a 2M/440 HT and other assorted units - but one needs to perform a little homework before purchasing any equipment.

I mean, the C288a was the PERFECT choice for where I lived and what -I- needed. But it might be the LAST HT of choice for someone somewhere else in the country.

LONG: 4 pages

ELECTRICAL INTERFERENCE

Postings asking for help with electrical types of interference have appeared here periodically. While it is difficult to solve specific cases without having direct access to the equipment, some basic information can be used by the posting party to track down the source of the problem. Knowing these basics will also help the posting party to provide enough information, so that a respondent can make an intelligent analysis. *Most of the postings lack the information needed.*

Interference Mechanisms

There are two mechanisms by which interfering signals can enter an electrical instrument. For this discussion I will use a radio receiver as the electrical instrument and an automobile as the source of the interfering signal (often called noise). The two mechanisms which need to be understood are CONDUCTION and RADIATION. The interfering signal can enter the radio by one or both mechanisms.

Conduction

This mechanism is defined as an interfering signal which gets into the radio by means of an electrical conductor. The conductor most often is a power wire from the car battery to the radio. The approach to reducing and possibly eliminating conducted noise is to install a low-pass filter in series with the power wire as close to the battery as practical. If the conducted noise is a ground loop, a current balun may be needed.

Conducted noise is less of a problem today than it was before 1960 when AC generators (commonly called alternators) replaced the DC generators in automobiles. DC generators and motors produce sparks on the commutator, which is directly impressed on the battery. While the primary mechanism is conducted, some radiation may be exhibited too. Both type of generators use a device called a regulator. All of the DC generators used regulators with relays inside, which also was a source of sparking. Most AC generators have regulators built with transistors and produce no sparking.

If the radio has its own power source which is isolated from the automobile, the interference is entering the radio by the

Radiation mechanism. An example of this kind of radio is a portable with its own batteries and no metallic part of the radio is connected or touching any metallic part of the automobile.

One way to check if the noise is entering the radio through the power wiring is to connect the radio to an isolated power source. This may be done by running the power wires from the radio to a spare battery. If the noise is greatly diminished, the noise is being conducted through the original power wires.

Radiation

This mechanism is defined as an interfering signal which gets into the radio by means of propagation through the atmosphere to the radio's antenna. A quick test for this mechanism on a radio that uses an external antenna (eg, CB) is to disconnect the feedline from the radio at the radio's coaxial connector. If the noise is greatly reduced, the mechanism is radiated. (The exception is if the ground path for power to the radio is through the feedline's shield. A properly installed radio has both the ground wire and the hot wire run DIRECTLY to the BATTERY TERMINALS using large gauge wire.)

This is the most common mechanism for interference to enter a radio in most automobiles with AC alternators. The source of the noise is most probably due to the spark plug wires and/or the car's computer. Just because you have an expensive car doesn't mean the ignition sytem or the computer were well engineered.

Airplanes with piston engines use special spark plugs that have a metal shell. The spark plug wires have shielding just like a coaxial line. When the wire is connected to the spark plug the entire ignition system is shielded to ground, thereby greatly suppressing radiated noise. That is important when you need to navigate with radios. No, those plugs won't fit your car. Pre-1960 cars produced more spark noise than later cars. The newer spark plug wires use a carbon center conductor that helps to reduce noise. Hams often added shielded spark plug wires, shielded the distributor, put filters on power wires and in some cases added special springs to the ends of the wheel bearings to reduce metallic rubbing noise.

Tracking down the source of the problem may take some effort. Since the mechanism is radiated, you can use a small pocket (transistor) AM broadcast radio as a probe. Tune it between stations first, so you hear no stations. Adjust the volume as needed to hear the background static. Now place the top end of the radio (enclosed in the radio at this end is a "loopstick" antenna) near the likely sources of noise and listen for the same kind of noise that appears on the other

radio. Listen for the volume of noise to change when it is nearer one part than another. A marked increase in the volume of noise at one part tells you that part is the significant source.

If the noise is from the car's computer, the noise may be just as loud when the radio is near the case as it is near the wiring to the computer. This situation is a serious problem, even for the electrical expert. Noise near the case says that the computer is poorly shielded. Noise on the wiring says that the lines are poorly filtered and/or shielded for EMI. A two-part ferrite core placed securely around the wires as close to the computer as possible may help suppress the noise. These cores are used on some computer monitor video cables for the same purpose. Ferrite cores are often used to suppress other types of interference too.

Note: Do not use an FM radio to track noise. It will not respond to electrical noise nearly as well as an AM radio. An AM-FM combination is okay as long as the AM only is used.

Real Cases

CASE #1

Some years ago I would hear a raucous noise on my Ham radio at home. (That was a different location than now.) It appeared at random intervals, but the intervals would often last for a few days.

I took my pocket AM radio and set it as described above. Then I walked around my house checking for noise at electrical wall outlets and the various appliances, including lighting fixtures (some flouresent lights will generate noise). I heard nothing. I then disconnected the Ham radio antenna and heard nothing. The noise was obviously propagated by a radiated mechanism.

The next step was to survey the neighborhood. I went to houses nearby and held my AM radio up next to the electrical hour meter where the power lines enter the house. Only one produced noise on the radio. I contacted the lady of the house and told her my situation and what I had found. I asked her if she would let me track down the problem. I heard a very strong noise at the electric dryer in the garage. The timer switch was not turning completely off at the end of a cycle and the switch contacts were arcing. I set the switch to OFF and went home to verify the result. The noise was gone. I asked her to please make sure the switch was in the off position after a cycle until she got it repaired. That noise never appeared again.

CASE #2

At my present location I can hear some electrical noise on my Ham radio. When I turn the beam antenna to the east the noise is at its lowest. When I turn the beam to the west the noise is considerably stronger. If I disconnect the feedline from the radio, the noise is gone. Why?

The power lines run along the front of my house, which faces west. The noise is similar to static rather than the kind produced by an electrical device. The power lines in this area are old and the electrical leakage is *radiating* noise. It is not a serious problem and it is unlikely the power company is going to overhaul their system for my pleasure. If the problem was serious, I could get them to fix it.

Conclusion

Knowing the two interference mechanisms provides a basis for tracking down which one or both is at work, the methods for finding the source of the interference, and then how to suppress or eliminate the problem.

It also helps to know what different kinds of noise sounds like. A static type noise is typically due to electrical leakage currents and is usually radiated. A sparking noise has a more raucous sound and is usually radiated also. DC generators and motors produce sparking noise, but sometimes produce a whine type of noise. Computers generate a sound similar to static and sometimes referred to as "white noise."

I have used examples that are the most common. There are other possibilities that are unusual, such as two dissimilar metals rubbing against each other. If this information does not help you to solve your problem, then no one is likely to able to solve it for you from a distance. The exception is a problem that is specific and well defined, such as "White noise on my Hamshooter model 5000 on 80 - 10M bands in my 1992 Toyota Grande with fuel injected V6. The ignition and fuel systems are computer controlled. The noise only appears when the engine is running."

Hope this information helps.

>I am trying to find a Collins radio news group or if any one can tell me
>the bandpass of the following Collins filter found in a 75A-4.
>The number on the filter is: F 455 N 20

Wayne:

The 75A-4 uses mechanical filters in the J case. This is a vertically mounted cylindrical case about 3" high with 9 pins on the base. It uses a common 9-pin miniature tube socker.

Normally the first three digits are the IF frequency - in this case 455 Kc. The letter indicates the case style and the last two digits are the bandwidth - this one indicates 2.0 Kcs.

I have seen J case filters in 500 cycles, 2.1 Kc, 3.1 Kc, 4.0 Kc, 6.0 Kc and 8.0 Kc.

Hope this helps.

>$310. Works great on 1.2ghz but 144 only goes to 145 and 430 to 440mhz.
>Better yet a mod to allow transmit on 902-928mhz would be great as well

In Japan, there are two publications I know of which talk about these
mods. One is a monthly "scanner" type magazine, and another is a
series of mod books. I have owned two of the magazines and was shown
the mod books. It might be a few months after a radio is on the
market, to have these published. I wonder if you can send a fax to
Standard in Japan and ask for their help. They are very helpful, I
was told, but will take a while for them to get people to translate
your request to Japanese.

How is this radio? Many of my friends are using the C508A, and they
love it. I think it's a bit pricey for it's low power and no NiCds.

Good luck,
David

5065. Instability in TS930?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-26 00:00:00 UTC
From: efeustel@fricka
Message-ID: <52dnnn$eld@news.ida.org>
Source record: 193671

I have a 930 that has a severe instability problem.
After the rig has been on under key down conditions long
enough for both fans to come on, the current on the final
amplifiers goes from 9.5 amperes to off scale, the ALC goes from
the middle of the approved scale off scale. The power output goes
to zero. The SWR remains about 1.1. All of the above is while
the rig is connected to an oil filled Heathkit dummy load.
The rig is in cw mode. The problem happens regardless of carrier
setting. The band I have verified the problem on is 30 meters.
Seems to happen on other bands as well.

Any constructive suggestions as to what needs to be done to
fix the problem will be appreciated.

Hi,

Very interesting web-page. I have been waiting for such a design
to come up. Let's look however at one critical point of the description:

> The heart of the transceiver is it's PLL/DDS unit, controlled by 8031
> microprocessor. Here is a very clean VCO (almost can be used like VFO,
> what is not so easy to achieve on 134 MHz), which is controlled by PLL
> unit, operating on high reference frequency (cca 2-4 MHz) which all
> minimizes phase noise, and there is variable reference for PLL, which
> is DDS chip AD7008, from Analog Devices.

After the RX and TX signal processing, which follows well proven
paths, this is the tricky bit. The concept sounds like it could work,
but many DDS synthezizers have so far suffered from sprogs and the like.
Let's hope for the best.

73, Moritz

>rig that was, as the rules required at the time, crystal controlled.

My goodness, I did almost the same thing.

I was in sixth grade. We had no money, so I went to the dump and would bring home old radios like the Zeniths in the big wooden cabinets. I took plates off the tuning capacitor and tried to make one radio cover two meters!

I put a pair of twisted wires across the IF stage of an old 1940's receiver, and used it as a BFO. I built a transmitter on a piece of peg board lined with foil, using parts from a TV set I got free at the dump. I collected pop bottles and bought a PR crystal for 7175. It was a 6AG7. Later I added a 6BG6 PA stage.

Good day,

I picked up a Heathkit HG-10 External VFO the other day. Would someone have a schematic they could fax me? I want to convert it to solid state, the osc. coils are very rugged since they have ceramic fired over them. I would be happy to supply notes for the mod once it was finished. I plan to make a QRP output for each band and have it all installed in the one box, since there is plenty of real estate.

I used to have an HG-10 but no more docs. As I recall, that VFO only
oscillated on 80M and that the band selection was simply rotating a
different dial scale calibrated to the harmonics of the fundamental
osc. The external radio would do the multiplication. My memory may
be foggy on this, but it might make your QRP project more interesting
with the need for multiplicaiton and filtering for each band.

From: kc5ng@dlep1.itg.ti.com
Message-ID: <52h5ng$f6g@sf18.dseg.ti.com>
Source record: 193529

My first station consisted of the following:

Eico 723 60-Watt xtal controlled CW transmitter (6CL6 osc, 6DQ6B pa)
Lafayette HA-800A receiver (ham bands only, solid state, drifted BADLY)
G5RV antenna, installed as an inverted vee, apex at 40', ends at 10'
Nye-Viking Speed-X straight key (which I still own and still use!)
homebuilt T/R switchbox using octal-base 110 vac relay
Heath code oscillator modified to provide sidetone

Later, added a Heath VF-1 vfo (which drifted opposite direction from
the Lafayette receiver, making for interesting QSOs!)

Total cost of all this was about $150 (a lot of $$$ for a college kid!).
I was first licensed in Wilmington, DE, as WB3JBG in July, 1977.

73 to all!

I posted this a day or two ago and have had three responses. Thanks. Wanted to post again to make sure those interested saw the post.

My father WB5WSN in Ft Worth, TX passed away about 10 years ago and just before his death he "bestowed" the above radio on me.

It is made by LTV Electronics and has SN 27605. Has copy of military manual GTM-D-133F which contains all schematics and such.

Unit weighs 31.2 lbs is 6.62" high, 18.18" wide and 12.84" deep according to manual. Dusty but not really dirty.

Is a SSB-AM-CW receiver with tubes and seimconductors. Will receive megacycles from 00.2 to 30.0.

I have no idea about the value, up to you. I don't know if the unit works either.

Thanks

5080. Re: Survey: What was your first radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-27 00:00:00 UTC
From: Don Levstik <d-levstik@ti.com>
Message-ID: <324C53D8.2A95@ti.com>
Source record: 193536

My first rig was a Heathkit HW-16 and one crystal for the 15 meter
ham band. First antenna was a homebrew rotatable dipole on an old
Alliance tv antenna rotor with a 30 foot push-up mast.
I also homebrewed an antenna tuner.

My total cost was < $100.00 for the whole setup including coax!

Those were the 'good old days' !

5081. Re: How much money could the FCC raise if the 2 meter band was sold for commerical bandwidth?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-27 00:00:00 UTC
From: fiz <fiz@lamar.colostate.edu>
Message-ID: <324C2A69.7E52@lamar.colostate.edu>
Source record: 193537

Maybe the more relevant question is how much money DOES the Federal Gov raise from the 2 meter band? For starters take the number of no-code techs and multiply by $6 each. Thats money that goes straight to Washington city (or close anyway). Then start trying to figure in the import taxes and sales taxes for 2 meter radios sold to hams. I've probably paid $30-40 in taxes just on my 2 meter equipment in the past 2-3 yrs. Now try to factor in the fact that the 2 meter band also lead to my paying at least this much more in taxes for the HF bands. I'll bet I've 'contributed' $100-150 in taxes/license fees over the past 2-3 yrs because of amateur radio (I took the 20 wpm code test itself 4 times).

Menu item 4-3 on the FT-1000MP is the Tune Up Drive power. The manual states that is the power used to tune up an external amp. How does one activate this power? Does this setting simply limit the maximum output power or is there some "button" that can be pushed to tx a constant carrier for amp tune up?

Thanks,
Kory

5092. Re: Kenwood TS950SDX Comb filter disable on CW?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-27 00:00:00 UTC
From: david@braeside.demon.co.uk
Message-ID: <AE7211E396685E782@braeside.demon.co.uk>
Source record: 193548

Keith:

Thanks for the info on the TS950SDX Comb filter. I had not seen anything published on this either. I just noticed it sounded different when switching between SSB and CW when I had disabled the SSB comb filter. It also was very noticeable if I tuned through a strong carrier that there was a deep null.

The DSPFFT software which I run on my PC shows the null very clearly indeed.

When I first got my 950 I had a few problems (Sub RX noise from main RX noise blanker) and had a discussion with the UK importer who fax'd Japan and I got some very useful technical info back from them (after a bit of a fight with the UK importer who didn't want me to have it). I found out about all the faults and fixes that they had put in at various stages as well as fixes to the fixes etc. I thought it was just British companies that made all of these mistakes by rushing new products out before they were ready!

There were still a few things that were not cured by the technical notes and I did a bit of work myself on the FM squelch and also added a method of inhibiting the PA Bias and Fan when transverting.

There still are some daft features:-

No method of adjusting CW sidetone level from front panel or menu! - Yet I can adjust the panel lights under a menu control!

No LED to show notch filter is on.

Disappointment:-
Only 1 off 500Hz CW filter can be fitted if both 250Hz filters fitted.

Convert function should have pins that allow external selection of band for the display change (50, 144, 432 etc). The 'menu' method is hopeless and clumsy.

The manual leaves a lot of things out, or is ambiguous.
eg CW RX DSP LPF Independent of SSB LPF.

I would have liked a choice of whether to move freq when switching between CW and SSB or not. Sometimes I preferred the TS430 method where the frequency moved as well as the display allowing me to listen to an SSB station and then switch to CW and call him on CW without having to retune him when I did so.

--
As you will have guessed I use the 950 on VHF and UHF with transverters for weak signal work mainly. I suppose that a few of these things don't matter so much on HF.

Oh - I also had to do the following:-
Even though it was bought in the UK for the UK market and also with their base microphone MC90:-

1750 Hz Move Plug on Display Board (Disables PL) since UK uses 1750Hz Toneburst.
Increase TONE preset to MAX (Toneburst Deviation)
Increase FM MIC Gain to MAX (FMM)

D17 on DIGITAL BOARD cut (General Coverage TX Modification) so I can Transvert above 29.70MHz.

Moved Plug for INT/EXT Keyer.(manual was very confusing here)

Hi David,

You are quite observant in discovering that the comb filter is
continuously engaged in the TS-950SDX when in CW mode. I suspect very
few SDX owners have paid this close attention to details. I don't
believe Kenwood acknowledges that this is the case in their
literature... but the filter does contribute significantly to the
"illusion" that the SDX is a very "low-noise" rig, especially on CW
(since the filter is always engaged!).

The effect of the filter is to provide a peak at 820Hz of approximately
16dB, and a null at 1587.5Hz of -40dB.

I know of no straight-forward means of switching this feature on CW. If
you discover one, I'd greatly appreciate your letting me know.

Regards,
Keith (KS9C)

David: I tried to post this response also to the newsgroup... but it
was rejected with the following message:

A News (NNTP) error occurred.
Article not posted - more included text than new text.

I've just switched to Netscape Navigator 3.0 and have never encountered
this problem before. Any ideas? Keith.

Very simple: Depress and hold "D", "9" and "*" while turning on the power (p 54 of the manual). This will clear all memories and set all settings, channel step and repeater shifts to the factory defaults.

Hi Gregg-

You probably mean an R-4A and a T-4XB, I would guess. Great pair.
First thing to do is order a set of 160, 30, 17, and 12 meter xtals for
them, and you're on all bands at that point.

You mentioned digital options......
There was a digital frequency display made, but not by Drake. Can't
remember who made it, but I have seen a couple of them at hamfests.
Probably works just fine, but I have never really felt the need. I use
Drake twins almost all the time on the air, and the frequency readout of
the dial is plenty accurate for anything but SERIOUSLY crowding the band
edge. And if you keep an eye on the accuracy of your xtal calibrator,
and keep the dial calibrated right, then you can get just about as close
to the band edges as you want, within reason.....

Also, there was an excellent frequency synthesizer made (the FS-4) that
makes the 4 line twins into a continuous coverage rig, covering 500 KC
to 30 MC. You'd need two of `em to work split.

As far as "internal options", the "A" receiver and the "B" xmtr were
pretty complete, right outta the box. Except for xtals of your choice,
of course. The only band that is shown on the front panel bandswitch
that is not ready to run from the factory is 160 meters, and xtals fix
that.

Most of the time in my shack, I use the Drake C Line twins for CW, and
the Drake B Line twins for phone. I also have Collins S Line gear, but
I use the Drake the most by far.

The Drake C Line twins can be modified with some mod kits from Sherwood
Engineering (in Colorado, I think) but I don't know for sure if there
are Sherwood mods for the A or B series or not.

Those are great units, Gregg. I think you'll like `em a lot. Hope you
enjoy yours at least 10% as much as I do mine.....if you do, then you'll
love `em! <g>

I don't have a schematic, never had one of these. However, the Heath
ham equipment went through some line changes over the years, ie before
there was a monitor scope that matched the SB-101 line, there was a monitor
scope that did the same thing but matched earlier equipment.

Before this VFO, there was the FV-1 Vfo to go with the earlier line of
AM/CW transmitters. I would assume that the circuit is pretty much the
same. The important point to this is that in late 1972, maybe November,
after the US novice class was allowed the right to use VFO's, there was
an article on solid-stating the VF-1 vfo, and it did include the
schmeatic either original or as modified. If you can get a hold of that
article, not only would you have some information about the same basic
circuit probably, but you'd also have some idea of how somebody else
accomplished the same thing.

: Thanks.

To reset the CPU and all memories to factory default do the following:

Press and hold D/MR + ENT + REV while turning on the power.

First CW tx ARC-5 home brew power supply, RX Q-Fiver w/home brew xtal
contolled converter. 1959
Fisrt SSB rig, home brew phasing exciter using 2Q4 network, a pair of
7360 sheet beam tubes on 1650 Khz, Heterodyned via a 7360 balance mixer
to 40 and 80 meters with nominal 5 Mhz vfo (arc 5 parts). Exciter PA
was a 6BQ5 running about 3 watts PEP out. RX was old Collins
R105/ARR-15 with Qfiver. Added home brew 4-1000 grid driven PA in
1962. Mostly home brew stuff out of necessity aid by generous local
hams with mostly free junk boxes. Most generous was the late K6CXB.

First Radio to use at home was a Heath HW-16 crystal controlled owned by the club, loaned for 6 months to new hams. First Purchased rig was Heathkit HW-101 bought used.

If your goal here is to decide what to buy now, I strongly recommend starting with a mobile and not an HT for VHF/UHF.

Man, that was my dream rig. I had a 1979 buyers guide to ham radio and
it prominently featured the Ten Tec Century 21 with nice looking straight
key and an SWR meter (manufacturer unknown). I think I can still recite
the advertisement description in detail!

I settled on a Heathkit DX-40 transmitter, which a non-ham neighbor gave me
after retrieving it from a Salvation Army rummage sale. I bought 3 crystals
a few tubes, and a set of knobs off of an old RCA color TV (to keep the
loading capacitors from shocking me since the original grey heathkit knobs
had long ago fallen off. Of course, the rig did not come with a chassis
cover, just the front panel and under-carriage, but I got it working! I used a
borrowed Radio Shack DX-160 SWL reciever (with BFO, of course) for the reciever.

I was "on the air" for about 25 bucks. Of course, the first QSL card was
from none other than the local OO. Ha. I still have that card claiming
that my signal was chirping, clicking, and PM'ing. About 6 months later
I upgraded to a used (prebuilt) Heathkit DX-60B, HG10B VFO, and HR-10B receiver.
Now THAT was a site to see....Benton Harbor Green everywhere, and it took up my
entire desktop. I got the whole setup for about US$100 bucks. I was later
told it was a lucky find. Kept me warm in the winter too.

73,
Joe

5118. Alinco HF Auto Antenna Tuner - EDX2

For Immediate Release
September 18, 1996
NEWS RELEASE
FOR MORE INFORMATION:
Doug Wynn, Sales Manager 310-618-8616
Taka Nakayama, Vice President 310-618-8616

ALINCO INTRODUCES EDX-2 AUTOMATIC ANTENNA TUNER

TORRANCE, CA -- Alinco Electronics has announced the addition of an Automatic Antenna Tuner, Model EDX-2, to its line of Amateur Radio equipment.

The EDX-2 is designed to provide a quick match between antenna and transceiver. The EDX-2 has the ability to match a length of antenna from 8 to 80 feet, on Amateur Radio bands from 10 to 160 meters. A minimum antenna length of 40 feet is required for 160 meter operation.

Intended to be mounted at the feed point of the antenna, the EDX-2 is enclosed in a weather-resistant case. It is suitable for use in mobile, base and marine operating environments and can be operated in a horizontal or vertical position.

The EDX-2 Antenna Tuner unit comes equipped with a control cable interface designed to plug directly into the Alinco DX-70 HF radio but the unit can be adapted for use with HF radios made by other manufacturers.

"The EDX-2 has been manufactured and introduced in response to the requests of our customers," said Taka Nakayama, Vice President of Alinco Electronics. "We are proud to add the unit to our product line and weï¿½re sure the Amateur Radio community will find it to be a strong performer."

Doug Wynn, Alinco's Sales Manager added, " The EDX-2 is the answer for hams who want to operate mobile or from base units that have restricted antenna space. The price of this unit also continues the Alinco tradition of offering superior value." The MSRP of the EDX-2 is $344. The so-called "street price" of the unit could be lower, as Amateur Radio dealers often discount from the MSRP.

The EDX-2 augments Alinco's antenna tuner line. The EDX-1, a fully manual tuning unit has been available for some time, but input from hams who have communicated with Alinco indicated the desire for a fully automatic unit. Wynn said this is reflective of the many hams who are operating on HF frequencies from mobile platforms, where manual tuner operation is not practical. Alincoï¿½s DX-70 HF radio is designed for base or mobile use and has proven quite popular due to its ease of operation, features and price. "We believe the EDX-2 will be a great ï¿½companion

purchaseï¿½ with the DX-70," he said.

Technically, the EDX-2 uses computer logic circuits to quickly operate a network of capacitors and inductors to find the combination that presents the lowest possible SWR to the radio. The ability to use many combinations allows the owner to use a random length of wire for an antenna. Mobile users have added flexibility in being able to use an 8 foot whip when in motion or adding a length of wire to the whip when stationary in order to improve HF operating performance.

EDX-2 SPECIFICATIONS:

Frequency Range :
3.5 - 30 MHz (with minimum 2.7m/8.8 ft whip)
Max input power :
200 watts PEP
Input impedance:
50 ohms
Min tuning power:
7~20 watts
Rated Voltage:
13.8VDC +/- 15%
Temp Range:
-22 F ~ 140 F or -30 C ~ +60 C
VSWR:
Less than 2.0 : 1 (except when element length is *
wavelength or its
multiples)
Weight:
5.29 lbs ; 2.4 kg
Dimensions:
11.41" X 14.76" X 3.54" or 290mm X 375mm X 90mm (excludes
projections) HxWxD

I have one for sale, if you're interested. It weighs about 30 lbs., and is of traditional Collins quality. The physical rf integrity is no doubt far superior to what hams usually have, and the fact that it was expensive is clear as soon as you examine the insides. It has the best AGC I've ever seen on a receiver. But, it is pre-DDS technology in the synthesizer, and goes in 100 Hz steps as you tune a station in which I find annoying this day and age. So for those of you who want Collins quality of recent (mid-70's) vintage, and can do without the bells and whistles of off-the-shelf gear and find use for a solid receiver, it can be recommended. You should get a copy of the manual, and see all the possible options Collins made for this. It'd be a hobby in itself collecting them!
Regards, Howard.

I would imagine that the power is pretty dirty too. Try powering up the
radio with it's own battery, rather than the one in the wheel chair. If
that fixes it, a 12V power conditioner might be in order.

In article <52i2ac$kg3@nadine.teleport.com>, prografx@teleport.com says...

>We are in the final stages of getting an Amateur repeater on the air
>and need to acquire or build an ID'er.

For the cost involved, Hamtronics sells a diode programmable id'er that works well. The additional problem is that it should be timed as well. A circuit can easily be fabricated from an IC timer like a 555 that will start timing as soon as the COR is enabled. Just make sure that once triggered, the timer will latch on and continue to time until 9 or 10 minutes are up and then trigger the id'er.

Good luck
Brian - N6ZAU

5129. Radio Shack HTX-202 Opinions

Big and heavy

Sturdy

Prone to failure but warranty/TSP is tranferable.

Intermod resistant no mods available.

Good transmitted audio if deviation is adjusted properly
real FM

Very popular many used units available because of know problems
buying a used one with TSP may be the best deal.

I have had several sold them all (too big)

Hope that helps 73 Jerry KK5YY

Source record: 193449

I had a similar problem with 2m FM in a GM car. The radio had so much noise on certain frequencies that is was useless and a couple just happened to be local repeater frequencies. It turned out to be the "clock" in Electronic Control Module. I contacted a Tech Rep up at the GM proving grounds and they ran some tests to confirm this. He then contacted the ECM factory in Indianna to see if there was a fix. They said they could shift the "clock" frequency to get it out of the 2m band but could not get rid of the noise altogether. I would have to take the car into the dealer and have the ECM shipped to Indianna for the work (at the owner's expense of course). I have found since that the Yeasu FT-2500 was less susecptable to this interference vice and Alinco DR-110, DJ-180, & RS HT-202. For what it's worth...

Source record: 193454

Yes boys and girls I have finally gotten the receive mods for the Icom
Z1A

Easy cheesy if you are good in small circuit situitions.
Otherwise take it to somebody!!

Remove the 4 outermost screws on the case and then the two at the bottom
of the top part.

Remove the Tone Squelch unit.

Underneath you will see the ribbon cable that attches the back of the
radio to the front.

At the
bottom of the connector for this on the left hand side you will see a
small surface mount Diode (#15 there are no numbers on myne) all by its
self with the exception of another small componet underneath it. Which
definately is not a diode.
it has three legs one towards the top and two at the bottom.
Grab a solder iron (with a very small tip) and something like an
exacto knife.
prop the knife under the componet and touch the iron to one of the legs
and with the weight of the iron the componet should begin to lift off
the board.
now do the other 2 legs.

After that
put it back together and press
B and # and turn the power on.
That will do it.

I believe that some of the folks who read uk.radio.amateur have this already in machine readable form or can point you in right the direction for a web site. I have cross-posted this, and hope someone posts the data as a followup.

As to CTCSS, although there has been a regional plan of tone assignments for some years, I believe that all of the repeaters on VHF and most on UHF are still only raised by a 1750 Hz tone-burst.

5155. ICOM IC-2350H Unacceptable

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-28 00:00:00 UTC
From: Bill Stewart <stewart@peganet.com>
Message-ID: <324DD2FD.7617@peganet.com>
Source record: 193460

I have an ICOM IC-2350H dual band rig and after trying to work around a problem with ICOM I have to pass on that I find the radio to be unacceptable for general ham use.

The problem is caused by an UNDOCUMENTED feature supporting cross band repeat. The radio has it built in, even though they do not document or support it. Specifically, the receiver does not mute during transmit. If someone starts talking on the other band while you are transmitting it will come through the speaker, into your microphone and be rebroadcast without their knowledge.

YOU BECOME A REPEATER WHETHER YOU WANT TO OR NOT, AND YOU MAY BE RETRANSMITTING THINGS YOU ARE THEN RESPONSIBLE FOR.

Icoms' super high tech, sophisticated solution is for you to reach over and turn down the volume on the other band when you decide to transmit. You must then also remember to turn it back up when you are done, else lose the ability to scan the other band.

I believe this is a programming bug, but in Icom's brief response to my inquiry they would not own up to it, merely stating that they would look into that on future models and maybe add a caution to the manual.

Be forewarned about this rig. For example, if you were talking on a local 2 meter repeater and someone started transmitting music on the UHF side while your were transmitting, you would then be retransmitting that music, a clear violation of Part 97. Similarly if someone started cursing.

I am stuck with this puppy and having to manually adjust the volume every time I decide to jump in on a round table, or check into the net. You should skip this radio, but if you get a chance to attend an ICOM day at your local dealer, please pass a copy of this message on to them. Maybe if they see some reaction in their sales they will resume building rigs that won't make you do illegal things.

73!

>but many DDS synthezizers have so far suffered from sprogs and the like.
>Let's hope for the best.

Look carefully where the DDS is being used - it is a variable
reference oscillator for the PLL. Any amplitude noise on the output
of the DDS will be eliminated in the digital limiting input to the
PLL, and any phase noise will be attenuated by the PLL reference
divider and the PLL loop filter.

Using a DDS as an adjustable reference or as a heterodyne oscillator
in the feedback loop usually avoids the major problems with the DDS
while taking most advantage of the DDS benefits.

I have done it to a transistor marine set from the 70's. I had to add about
25% to 40% more capacitance across all the coils to get them to resonate. I
use it as a packetcluster node now.

Source record: 193465

Well if you travel much through Wyoming 440 is very few and far between.
2M can be accessed in 80% of the state with 10 watts and a good ant. 50
to 60% with a 5 watt HT and a mobile mount ant.
But pick up a repeater guide and check the locations for both 2 and 440
repeaters for the areas you travel most often.
Then remember you can buy a dual bander for less than two single band
radios. I have a dual bander HT that vary rearly gets used on 440,
nearest repeater is in a town over 80 miles away.

Is there a way to disable transmit capability on certain memory
channels? I really want certain channels to have receive only status.

Please "cc:" answer to my e-mail as USENET is unreliable at best.

Thanks,
DOUG

5162. Re: 1985 blazer/gmc 2m fm QRN

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-28 00:00:00 UTC
From: Cal Lorencz <ve6ns@smartt.com>
Message-ID: <324E003E.5274@smartt.com>
Source record: 193467

I have a 1988 Chev that gives me a "modulation" type of noise.
I have attempted to solve it by 1) Double shielding of the coax and
battery cables 2) Additional grounding of the ECM (computer).
Still, it does not help. Some observations are: It is a "carrier" that
wanders around within the 2M band. It is most frequent when it is Hot
outside (It does not seem to do it during the Winter below -5deg/ C)
I have also just recently detected it with an HT!! So now I suspect
that something is "radiating" the frequency near field. Maybe the fuel
pump or other sensor?

It sounds like a "growl" sort of deep and roaring. It will stop a scan
in it's tracks at a Full scale signal. Then when I accelerate or change
the speed of the heater/vent it will move off the freq.

My radio is a TM241 with a 5/8 mobile. But now I think that that is not
important as i believe it is a Rf emission.

Any thoughts or similar experience?

Harry

FYI, Radio Shack no longer offers a service manual for the DX-300.
during the era that the DX-300 was produced, the owners manual for the
DX family of products included a schematic. Should you have any useful
information on this radio, it would be appreciated.

BTW, emphasis in text is better in quotes, caps looks like shouting...

Well I have a nice Western Radio WR2400 UHF Mobile.
It appears to have a empty 8-10 matrix for soldering
diodes, but there are not just a little chip.
Does anyone know how to program a single channel for
this radio via Diode matrix. Well I assume that it is how
it is done.

Thanks in Advance.

Admittedly I've never bought manuals for anything big like a network analyzer, etc. Mostly power supplies, scopes, sig gens, etc. Never paid more that $100 for paper, $20 for fiche. Manuals for newer stuff tend to be more expensive, but I can't afford to buy new stuff for hobby use anyway.

I have just bought an Optolinx interface box and its a great feature packed box but now that i have the ability to control my Icom sets i have the problem of getting the receivers to stop during scanning there is an aux socket which requires a audio line squelch line and a ground but unfortunately have no idea how to achieve this.

the radios i am attempting to stop are a ic-706 and 1c-737a any suggestions or ideas would be greatly appreciated i am using scancat gold software and i am aware you can purchase the cable from them but i would like to put one together my self as this won't be the only software used and it would be good if i can use the Optolinx to do the squelch or audio detect.

thanks in advance

My first radio was a Ten Tec Century 21 HF transciever. This was a solid state CW only rig that put out about 60 watts. It had no WARC band coverage. The antenna was an 80 meter dipole and later a 15 meter dipole was added. All of the antennas I used were home built. This was back in 1980

Quite so, Tony.

The real problem is that the IF-10C has become a discontinued part. To find one you are limited to locating a dealer with old stock or buying one secondhand at a hamfest. I believe that Kenwood USA had a small run of IF-10Cs custom-made last year and sold them out, but it might be worth contacting them in case they plan to do it again. They should.

Combination interface-cables like the MFJ are indeed much cheaper than Kenwood's IF-232C but they are also dangerously inferior. The reason is that they do not isolate the TTL-level radio from the PC serial port, while the Kenwood interface does. So does the homebuilt interface in the 95-96 ARRL Handbooks, which can be built at low cost. (I write from bitter experience about the lack of isolation, having fried a $200 board in my 850 with transients from the PC serial port.)

NEWS RELEASE
FOR MORE INFORMATION:
Doug Wynn, Sales Manager 310-618-8616
Taka Nakayama, Vice President 310-618-8616

ALINCO INTRODUCES DX-70TH
NEW MODEL OFFERS 100 WATT OUTPUT 160 - 6 METERS

TORRANCE, CA -- Alinco Electronics has announced the addition of the DX-70TH to its growing line of Amateur Radio equipment. The new model maintains all the features of the popular DX-70T mobile/portable/base unit but increases the output on 6 meters to 100 watts. The older DX-70T has a 6 meter output of 10 watts.

"The DX-70TH was created in response to suggestions made by Amateur Radio operators and members of the press that cover the hobby," said Taka Nakayama, Vice President for Alinco. "We believe that the Ham Radio community will respond in a positive way when a manufacturer takes their suggestions and turns them into reality."

According to Doug Wynn, Sales Manager for Alinco, MSRP of the DX-70TH is $1,074. But Wynn has already heard reports of dealers who are examining discounts on the unit and offering a "street price" of just under $1,000. "Even at $1,074, there is tremendous value in the DX-70TH," said Wynn. He added, "Itï¿½s able to be used as an all-mode (SSB, CW, FM, AM and Data) radio in the mobile/portable/base station environments. It is the type of radio a new licensee can buy and grow into as his or her interests, capabilities and license privileges expand." Wynn pointed out that the DX-70TH includes a general coverage receiver for reception of short wave broadcasts and other transmissions.

Alinco officials indicate the DX-70TH will be offered in tandem with the DX-70T for the foreseeable future. "The DX-70T continues to be a value leader in the HF+6 Meter mobile field, with a street price of well under $1,000 per unit. This gives customers a choice; if they seek the additional output power of the DX-70TH, itï¿½s available. If itï¿½s not important, the DX-70T can save them a few dollars," Wynn said.

The new DX-70TH also comes with a mobile mounting bracket as standard equipment, Wynn said. Popular features such as the removable remote-mount face and the interface with the EDX-2 automatic antenna tuner have been carried over from the existing DX-70T. Other available accessories include the EDS-4 Front Panel Remote Mount Cable and the EBC-8 Front Control Panel Remote Mounting Bracket, the EMS-14 Desktop Microphone, EDS-5 Microphone Extension Cord and the EDX-1 Manual Antenna Tuner.

Alinco also announced that the new architecture of the DX-70TH is not able to be retrofitted into existing DX-70T models, so no upgrade kit will be available. "The changes to the internal design of the radio were extensive, so much so, that a modification kit is out of the question," said Mr. Nakayama, who is also an engineer. "That is why we created another model designation," he said.

Alinco anticipates shipping the new DX-70TH radios to dealers in mid-October.

At least two more new Alinco radios are expected to be announced before the end of the year, according to Doug Wynn. "Weï¿½re putting final details in place right now, and weï¿½ll make announcements to the press as soon as weï¿½re able to share the information.. All the new products, including the DX-70TH share Alincoï¿½s commitment to creating Amateur Radios that are well-designed, dependable, easy to operate and very affordable."

Please take no offense, but HP printed manuals are rather high.

I picked up a Micro Fiche Reader for $15 at a local salvage store and have been getting all of the manuals that I can in Micro Fiche form.

They are a little harder to read, but a printed manual for one scope was $250 in paper and $26 on Micro Fiche.

We are in the final stages of getting an Amateur repeater on the air and need to acquire or build an ID'er.

We are building our own control electronics, and would prefer to build our own if a decent design has been published in the last few years.

We would also consider a commercial ID'er if anyone has something available. We aren't going to get fancy until later, so right now a plain-jane CW ID'er would be just great.

If you have any items or info along these lines, I would appreciate a note via E-mail.

Thanks!

Source record: 193477

In article <324DD2FD.7617@peganet.com> Bill Stewart <stewart@peganet.com> writes:
-The problem is caused by an UNDOCUMENTED feature supporting cross band
-repeat. Specifically, the receiver does not mute during transmit.
-If someone starts talking on the other band while you are transmitting
-it will come through the speaker, into your microphone and be
-rebroadcast without their knowledge.

This is not a specific flaw with this Icom radio. Most dual-band radios
do this, and you would have the exact same problem if you have two
separate radios. The solution is simple: Turn down the other side or
other radio, or just release the PTT if you hear something objectionable.
It's the same thing you would do if someone walked up to you while you were
transmitting and started yelling obscenities. If you want a technical
solution, just use a relay controlled by PTT that switches the speaker
output to a dummy load, or add a muting FET in the audio chain.

-I believe this is a programming bug

No, it's a fact of life. Radios will transmit whatever they hear. It's
not a problem or feature unique to Icom radios.

I used to have one of these years ago in my college days (mid '70s). As I recall, the only docs. I could find were articles in early 1940s ham radio magazines (CQ and 73 I thnk!!). Good luck in your project. It'll make a fine CW and AM transmitter. As i recall, the dynamotors are itough to find.

Try Fair Radio Sales in Ohio for info...they still may have some also.

Hi All,

I hope I don't offend any one by posting this off-topic message. If I do, I sincerely apologize.

I'm looking for people to test a logging program I created for the Pennsylvania QSO Party contest. I could not find any good logging programs for the contest that were Windows programs, so I decided to make one. Well, it's done to the point I can't elicit any errors. I need some people to "push some buttons" and see what happens.

The only thing I can offer in return for your help is a copy of the software at no charge. This will include any and all updates to the software any time I make any. I'm planning on making changes at least once each year as the new rules and/or sections come out.

System requirements are a 486 or better processor with 8 MB RAM (that's the only computer I've tested it on) and Windows 3.x, Windows95, or Windows NT. Approximately 5 megabytes of disk space is required for installation, and additional disk space for the log files.

If you're interested, please contact me by e-mail and I can e-mail you a copy (3 disks) or I can post it to the Newsgroup.

Thanks In Advance,

The easist and fastest way to find it is to find a piece of cable with
a pl259 connector on one end and nothing on the other end. Make sure
its long enought to go around the truck. On the end with nothing on
it, cut back the cable so just the center conductor has about two or
three inches showing. You can turn up the volume of the radio and now

use it as a probe. This will help you locate your problem. Another fast test is to disconnect your antenna and see if the problem goes away. If it doesn't then the noise is in the dc line.

My 'memory adapters' which are designed for the KWM-380 and HF-380 transceivers will work, I am told, with the 651S1 which I believe has the same receiver as the transceivers. I am surprised at the 100 Hz step comment. I would appreciate it if someone would continue this thread as I have never had a 651S1 and I would have thought that finer steps were possible.

My memory adapters are designed to give these radios battery backup and more memories (99) to be accessed via the keypad.

With those parameters, I'd definitly recommend a monobander. In most areas, even larger cities, 440 is much quieter. I use 440 (and 220) a lot locally, but on the road, I find contacts much easier to come by on 144. In fact, I surprise people by showing up as an out-of-towener on 220 and 440 repeaters, and few travelers attempt contacts on our local 220 and 440 machines (Raleigh, NC).

You might find the isolated instance where a UHF repeater affords coverage or features beyond a VHF machine. The only other advantage I can think of might be easier resale someday.

Hi,

Very interesting web-page. I have been waiting for such a design
to come up. Let's look however at one critical point of the description:

> The heart of the transceiver is it's PLL/DDS unit, controlled by 8031
> microprocessor. Here is a very clean VCO (almost can be used like VFO,
> what is not so easy to achieve on 134 MHz), which is controlled by PLL
> unit, operating on high reference frequency (cca 2-4 MHz) which all
> minimizes phase noise, and there is variable reference for PLL, which
> is DDS chip AD7008, from Analog Devices.

After the RX and TX signal processing, which follows well proven
paths, this is the tricky bit. The concept sounds like it could work,
but many DDS synthezizers have so far suffered from sprogs and the like.
Let's hope for the best.

73, Moritz
Hi,
yes it is very interesting question. With new DDS chips it looks like a peace of cake to
make

a kind of "short wave transceiver (or general coverage receiver) in a chip or two", but DDS really produces some unwanted signals, which is very difficult to predict and control. In my
oppinion there are two resons for that:
1. some high level mathematic, and
2. DDS chip is often controlled by some microprocessor, and is connected with it with bus, and microprocessor unit is a source of very very strong wide band signals (square wave signals of all possible frequencies), and those signals are propagating through the bus, and
affect dds unit.
This problem occures only when someone use DDS as a main oscilator, but
when it is the reference oscilator for the PLL than PLL solves this
problem. I have abandoned PLL for another reason, so this problem is
interesting to solve.
It can be solved by using a lot of screaning, and/or by loading dds chip serially
(using only 3 lines), instead of loading it parallel with 8 or 16 lines.
In my project I am using that, and also band pass filter after dds, not low pass filter.
Also, I have abandoned PLL in my design. As a rule of thumb VCO in pll must be enough stable to work like a VFO, and it is not hard, but impossible to acheive over 100 MHz. (I remember some vfo designs used in early days of MS work on 2 mtrs, where vfos were under the ground in a garden, 1 meter deep in ground, where the temperature is stable). Not very practical :)
So it is the main reason why good old IC202 (with VXO) sounds better than modern pll controled transceivers (in vhf range, on HF PLL works OK), which all have annoying "hiss like" sound. Problem is in PLL, even when reference frequency is high, 10 MHz or more.
After a lot of time I choose to use DDS on cca 18 MHz range, and mixed that signal with crystal controled stable frequency cca 116 MHz, but on a very low level (-15 dBm) on a double balanced diode ring mixer, and a lot of amplification after that (40 dB), and a lot of
filtering (6 tuned circuits, ie. 3 band pass filters). That produces +17dBm signal for first mixer.
Also very big problem is blocking, esspecialy when rx is on the top of the mountain, near some strong 100 kW (or more) TV transmitter. The problem is even worse becouse man cannot notice that the blocking occured (unlike imd problems, which is very noticable), only
the noise level is higher, and additional noise cover weak signals. Thats why i decided to use
12 tuned circuits between the antenna and the first mixer.

Several 2m and a fair few 70cm machines use CTCSS; AFAIK all UK 2m and
70cm repeaters accept 1750Hz tone, but CTCSS is better if you know the
tone freq. The RSGB publish a repeater list for the UK which I believe
includes CTCSS tone details.

10-4 on that manuals are too high from HP!

I ordered some older smaller manuals from HP and the
zerox quality was terrible. 75 pages of bad zerox
copies for over $75.00......??

(And I am a lifelong fan of HP M&TE as well as HP-UX)

They did, to there credit, pay the $3 UPS ground fee :-)

How do we unite and solve his problem..... I can setup an
on-line searchable database for 'virtual libs' and the
costs of obtaining cheap(er) copies.... especially for the
older gear that is beyond the limits of copyright.

I have one on line database for Linux Users Directory services
at works great, and I am happy to create a similar one for
older M&TE manuals if 'the list' thinks it will help.
BTW: http://www.silkroad.com/lds/ is the link to the Linux
Dir Services.

All the Best,

Tim

I've considered it, but even though HP's manual prices aren't too bad as
test equipment vendors go, they are still usually at least 2-3x what the
used manual dealers charge. Why don't you sell manuals for $10 each?
That should cover the printing cost.

BTW, Manuals Plus takes credit cards also.

Message-ID: <324F20AF.4ABD@amsat.org>
Source record: 193511

I am looking for comments and input on using the new Icom 706 HF rig with AEA's DSP232 for RTTY work.. Has
anyone done this that can offer input. Specifically cabling input, performance on RTTY, general comments. I am
new to RTTY work, so any input would be helpful. If I use the 706 in AFSK keying mode, do I use the upper or
lower sideband? I have not been very impressed with DSP232 so far on satellite packet-it does not work in the
KISS mode, but hopefully things are better on RTTY. I also have a spare DSP2232 that I can use in place of the
DSP232 if this would be a better setup. I appreciate your time and comments!

> fleet@mbl.edu

A duplexer should work just fine!

A duplexer is two filters - one high-pass, one low-pass, with the input side (as in this case) or output side tied together.

Basically stated, when you send six meter energy to the duplexer, it routes thru the high pass (cutoff about 35 MHz or so) filter, and goes to the six meter port ... when you send "HF" (160-10 Meters) energy to the duplexer, it routes thru the low pass filter and to the HF port.

Suitable duplexers are made by both Comet and Diamond, and are available at all major Amateur Radio dealers.

73, and good luck!

Hi Kory ...

QST had a very good article about masts of this type within the last couple years ... recommended reading!

The TV-type pushup masts are only designed for just that - TV antennas, requiring small (read "light" rotators), and must be guyed every ten feet, lest they attempt to geometrically resemble a snake trying to walk erect! I would not recommend them for anything larger than a medium-sized two meter beam or a small six meter beam (but not both), turned with a small rotor, like to Phillips U-105! I definitely would **not** put one up, unguyed (but roof-bracketed at 1/3 of its height above ground, with a 30 pound antenna with ten square feet or so of wind load, -and- a rotator weighing twenty five pounds, and stand (or live) underneath it!!!

If you want an unguyed tubular mast, look at the U.S. Tower Company MA-series products ... not gonna be $29.95 at the local R.S. store and weigh 15 pounds - gonna be half-way to four figures, and weigh several hundred pounds, and be made out of thick-wall steel tubing! But, it -will- stay up in a windstorm and it -will- stay straight, and it -is- designed for exactly what you are proposing to use it for!

My Alinco DJ-580 can be programmed to hear or not to hear on the band
that you are not transmitting on. It will receive both bands until you
key up on one and at that time the other band mutes. I would think that
all GOOD radios would do this.

Overall best is a very vague criteria. It depends on what weighting a person gives to each of the factors relevant to the radio. Is a good user interface important? Is size important? Is receiver performance important (it better be)? How about reliability, factory service if needed, etc?

My ranking of the radios you list is directly in reverse order of the way you listed them in each category, IE I'd put Yaesu first and Kenwood dead last in both cases. I don't generally dislike the Icom models you list, but I don't think they are best values either, so I'd leave them in the middle.

>Thanks in advance.

It's not so much that it has problems, rather it is that it doesn't
perform as well as some top of the line radios in a couple of areas.
It *will* overload on strong signals unless you manually use the
attenuator. And there is a bit of filter blowby inherent in this
sort of design. The latter is only a minor nit, the former can be
a pain. (Though less of one in mobile use because of the inefficient
antennas.)

The FT900 is better in both areas. But then it lags by having
no 6m or 2m capability, and by being much larger and having
a very busy control panel. Those factors offset the defects
of the Icom for mobile use to a great degree. I don't regret
choosing the IC706 for mobile use. It wouldn't be my first
choice for a home station (but then neither would the FT900).

Is this perhaps your first dualbander? This is perfectly normal
behavior for most of the dual band radios I've used, and certainly
no different from the behavior of two separate radios. The secondary
receiver remains active so that you don't miss a call even if you
are talking at the time. This is a good thing.

A couple of dualbanders I've seen have the option to insert
10 db of attenuation into the secondary receiver channel while
you are transmitting. This too can be a good thing, but it isn't
the norm for dualbanders with true dual receive capability.
There are some dualbanders which don't have true dual receive
capability, of course, but I don't consider that an advantage.

Thanks for the reply. I am familiar with PL, but I have only just
started using the GP300 programming software so was unfamiliar with what
Motorola meant by the terms it has assigned to the various functions in
the sofware. I have since discovered that setting one of the buttons to
'volume set' acts as a squelch defeat, which is what I actually wanted
to do.

HB>I am taking a survey to find out what type of radios new hams usually
HB>buy. Please post whether you bought an HT, mobile, or base as your
HB>first radio.
HB>Thanks!

I got my first ht at a flea. Picked up a Tempo FM Transiever - S1.
Course I couldn't use it cause I didn't have my ticket then, but it did
work. :)

Then after I got my ticket, I picked up a Kenwood TH22a and now carry
a HTX202.

5238. HELP! Dying ht

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-30 00:00:00 UTC
From: Ham_Operator@sys280.chatlink.com
Message-ID: <753987@280.chatlink.com>
Source record: 193334

I need help. I have the HTX202 and it's dying.
Here's a little background on how the problem started.

I had the chance to move into a 1st floor apt where I live and told the landlord if my radio wouldn't work, I wouldn't take it. He couldn't believe i'd turn down the apt for a radio. He asked me to come in the apt with him and try the radio and if it worked he'd let me have it. If not, he'd find me some place else. Well, I went in with him and tried it out. Sent out my call for a signal reportr and recieved a very good one. Was told I had the best transmission I had in a long time. It was actually full dfq for once. So, I took the apt. When moving, I put my ht on a shelf so it wouldn't get knocked around and made sure it was the last to go.
finally in my new apt, I spent about an hour on air. Set it down on my desk and plugged it in for recharge. After about two days, I turned it back on and threw out my call, got no answere. So I set it down and left it alone. Heard nothing all day. Truned it on the next day and heard nothing all day. Threw out my call and got no response. Switched over to another frequency and asked if there was anything wrong with the repaeter I was trying and was told no, so I switched back and tried again. That's when I realized I wasn't even getting the repeater tone. I took my ht out to several places I knew I had no problem getting and still nothing. Tried someone elese radio in home and no problems. So I know it's not the location. I can only get one repeater now, and it's very paicky as to when it wants to work. I'm not very technical, but was hoping someone could tell me what may be the problem and how to fix it. Any help will greatly be appreciated. I do plan on buying another radio, but still would like to get this one working again.

5239. TS-940 S-Meter

Wonder if anyone out there have had similar problem with
the S-Meter on Kenwood ts-940?
S-Meter needle lock at full scale (maximum reading), and it stays there
for long time. Have tried two times open and measure at s-meter circuit,
but what happens... s-meter needle gets back to normal position.
Cant see any bad soldering nor any thermal problem.

Will this mod restore am Aircraft receive 108-136 ?

The one mod I know of but haven't tryed yet is 800 mhz receive
It is a liitle more tricky
It involves adding 2 components on the 2nd IF unit Q12 & Q16,
Icom part # UN9110
then reseting unit with B & # and turning on power

If anyone has tryed this or knows of other mods, please post

BTW Canadian dealers are charging $70 for this mod

5246. Survey Results: What was your first radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-30 00:00:00 UTC
From: hbcsc274@huey.csun.edu
Message-ID: <52nelb$flg@csun2.csun.edu>
Source record: 193377

Survey Question: What was your first radio?

Survey Results:

51 responded either by email or post on rec.radio.amateur.equipment
---
23 (45%) built their own radio or modified one
8 (16%) bought or was given HTs
16 (31%) bought or was given mobiles
4 (8%) bought or was given base stations

I would have guessed that most new hams would buy HTs as I did. But
a lot of the respondants were older hams, who started out with
Heathkits. And in those days, prebuilt radios were very expensive or not
available. This survey is by no means scientific. The reason for
this survey was curiosity.

Thanks to all amateurs who participated in this survey.

The "monitor" switch does not open the regular noise squelch. What it does it disables the PL tone decoding so the radio can receive all signals on channel, not just the ones that have the proper PL code.

The idea is that on a commercial channel, there may be several different users or companies sharing the channel. Say a fuel truck firm and a mortuary. The fuel drivers do not want to hear the mortuary guys, and vice versa. So, the mortuary guys get a PL (tone-coded squelch or Private Line) of, say, 88.5 hZ. The fuel guys use a PL code of 100.3 hZ. Neither one will hear the other company. However, if a fuel truck transmits on the channel, he will block the signals from the other company.

On a mobile radio, the microphone hanger is grounded, so when the mike is lifted from the hook, the radio then monitors ALL transmissions and the driver can wait for the channel to be clear. On a portable radio, there is usually a little button by the ptt switch. All radios, be they portable or mobile also have a means to disable the PL, so they receive all signals.

Some cheaper sets will not only disable PL squelch, but all the squelch, so you hear the rushing noise. But the better radios only disable the PL part.

Capisco?

5253. Re: Survey: What was your first radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-30 00:00:00 UTC
From: Ramon Gandia <rfg@nome.net>
Message-ID: <324FAAF3.1DA5@nome.net>
Source record: 193384

My first setup was in 1959 as a Novice. I operated 15 meters as
WP4AQY. My receiver was a Hammarlund HQ-110 (later an HRO-5),
and the transmitter was homebuilt. It used a surplus ww-2 radar
set for the power supply, and the lineup was 6AG7 oscillator-doubler,
a 6AQ5 buffer-doubler and the final was an 807. I designed it.
The crystals were in the 5.25 mc/s range.

When I got my General Class license in 1960 I built a plate modulator
for it using push pull 6AQ5's, which required me to drop the TX
power to about 20 watts. I moved the set by rewinding the coils for
operation on 10 meter phone, and using same multiplication used
7-mHz crystals.

My 10-meter antenna was a quad loop made of 4 nails stuck high on
the wall of my old wood 3-story house and fed with 75 ohm RG-11
cable. The first day I fired up on 10-meters phone I worked ALL
continents including Australia and Antarctica. 20 watts. Not bad.
My call was then KP4AQY.

In later years I built a monster using push pull 810's in the final,
driven by an 813 and a command set for vfo. The modulator had
push pull 805's driven by push pull 811, driven by a small PA
amplifier. It easily went 1 KW on A.M., but never used it above
20 meters. On 40 meters, using a 50 ft vertical and base tunining
coil and extensive ground plane, I worked at high noon from
Puerto Rico into Colombia and Ecuador. Heck of a powerful
transmitter!

Never homebuilt anything on SSB. All store bought now.

Those were the fun days of radio.

Ramon, AL7X, Nome, Alaska.

Check out the Alinco DR-605 and DR-610. The dual banders are pretty
much the same; the 610 has detachable front panel. The 605
is about $450 and the $610 about $100 more. They are NICE radios.

It has continous tuning from 1.8 to 30.0 Mhz, handles 3KW PEP, the 3
core 4:1 balun built in will allow 75-660 ohm matching with tuned
feeders,front panel grounding switch, and a bypass switch also. This
information came from one of Dentrons ads in a 1978 publication. Hope
this helps some. I would say it should do very well with a long wire
antenna. I have seen these tuners, and unlike most of todays tuners, it
is very well built with very heavy duty components.

5262. Using COAX for shielded electrical connect to car batteries??

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-30 00:00:00 UTC
From: "Dennis F. Terribile" <wr4i@nando.net>
Message-ID: <52olch$4p5@newsgate.duke.edu>
Source record: 193393

Hi All..

Has anyone tried using the center connector of coax as a shielded electrical connection to a car battery? Should the braid be connected to the car body?

What would the rating be (ie how many amps could it carry) for each of the various coaxs? ie 9913 would probably be able to carry > 20AH from the battery terminal? I'm sure this has been asked before, but could not locate a source..

Thanks,73,

Dennis,WR4i

5263. More FT102 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-30 00:00:00 UTC
From: R.A.Booth@shu.ac.uk
Message-ID: <52onm6$8vh@redwood.shu.ac.uk>
Source record: 193394

A few months ago, I posted a request for help regarding a fault on my Yaesu FT102 transceiver. The problem was that the RX was going "deaf" occasionally. By pressing the ptt a couple of times, the receiver would come back up and all would be well for a while and then the same
problem would occur.

After reading through all the very helpful replies I received I replaced the 5 miniture relays on the RF board. This
so I am told is usually enough to repair the fault.

However the problem still exists on the 102. Does anyone have any ideas or possible solutions for my problems ?
(other than building or buying a new rig !)

It would seem to point to a mechanical, ie relay problem but I'm not sure.

Is there a FAQ available on the FT102 ?

Many thanks in advance for any help

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

TABLE 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

TABLE 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You | can also get Plectron repairs and parts from: |

Northeast Communications |
4 Oak Ridge Rd |
Newfoundland NJ 07435 |
201-697-8804 |

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

Dennis:
I have used RG8/u on several cars over the years. Use the
older solid dielectric cable not the foam or 9913 type. The solid
dielectric is very rugged, the only problem is that it is not too
flexible. RF wise it can't be beat, low impedence braided ground,
shielded 12v center, low voltage drop and the last cheap.

During the Olympics, I had the opportunity to talk with some of
Motorola's engineers. I asked about possible Motorola ham radios and
they said it is not likely that Motorola will get into ham radio, but
some land-mobile radios may be convertible.

>asked before, but could not locate a source..

Well, the center conductor of 9913 is 9 gauge, so it is better
than RG-8, 10 gauge, or RG-58, 18 gauge. But I prefer 4 gauge
wire for heavy current loads. It doesn't take much resistance
at all to drop an unacceptable amount of voltage in an auto,
so the bigger the better. (Truth be known, however, in most
installations the connectors have a higher resistance than
the wire, so to a degree this is overkill.)

10 gauge wire can *safely* carry 30 amperes, but it'll have
a 10% voltage drop in a 100 foot run at that current draw.
In an auto where the length of the run is only about 10 feet,
the voltage drop due to the wire will be on the order of
0.14 volt. That's probably not enough to get excited about.
The braid will have higher resistance, of course, and should
be avoided for heavy current draws.

I don't think there's much benefit to shielding the DC cables,
so I'd rather spend my money on heavier gauge wire for the
primary wiring. But if you've got the coax handy, it'll probably
work fine.

My first radio was a homeade crystal set using a coil wound on a toilet paper roll and a capacitor made from wax paper and tin foil. The crystal was gallium arsenide and the headphones were high impedance (2,000 ohm). This was in the early 50's and I think I got something from the Cub Scouts form making it.

The first "ham" receiver was a war surplus Navy super-regen set. It weighed about 110 pounds, with a separate power supply. Used the old 4 pin tubes and was incredibly stable and reproducible. Covered 200 Khz to 30 Mhz in about 14 bands. This was in the late 50's. Transmitter was a Knight, crystal controlled. Don't remember the model numbers for either the transmitter or receiver. Those were the days, all right.

I assume you mean the Alinco DJ-1GT 2 Meter handheld. If so, the modification consists of cutting the small blue and small red wire loops located on the pc board opposite the mail RF board. When you remove the screws and separate the two case, the main RF board is on one half, the other pc board is on the other half. After cutting the jumpers, reset the cpu and wide-band operation will be enabled.

For what it's worth ie: .027 cents - I've considered both and will
probably buy the Yeasu FT-900CAT. In talking to dealers and others who
own Yaesu equipment - I own an FT50R - they swear by the dependability
and quality of manufacture. Hopefully - maybe I can start a rumor and
maybe Yaesu will do something about it - an FT-900CAT with 6meters will
come out. However I'm thinking that a TEN TEC 6meter HT conversion kit
is just as good. But we're going into $'s.

Source record: 193410

Hi,
I am fairly recent Ham who has been using a straight key up until now. I just acquired a rig with a built in keyer, and I am wondering which of the available keyer paddles would be a good start. Local Hams have told me that the iambic is the way to go. One also suggested that the Bencher might be a little too touchy to start with. He recommended Vibroplex. I would appreciate some advice on this. I have looked around on the Net, and am wondering about the Vibroplex Brass Racer, and Iambic Standard. What about the Vibrokeyer Standard? Is the Bencher a better product? Help me to sort out the confusion.
Thanks,
Chris VE6RDC

5280. FT767 PLL CHIRP

From: "Dale R. Parfitt" <par@magg.net>
Message-ID: <324FFA69.52E7@magg.net>
Source record: 193411

My FT767 has an annoying chirp or click (only noticeable when listening to CW or a heterodyne) when the display changes in the 0.1 KHz position. i.e. when tuning and the display increments/decrements by 0.1 KHz a chirp is heard in the speaker.
Another small problem, although annoying, is that the clock for the keyer can be heard when the APF is turned on. Varying the keyer speed control (in RX mode) causes a varying tone in the background.
Both problems may be PS related- not sure but thought I would ask if anyone else has seen these problems before I open her up.

Tnx,, Dale WA2YPY

justin-

The HTX-202 may be a good radio for the money, but has some drawbacks. Aside from low cost, its main claim-to-fame might be its ability to resist intermodulation interference. It has a very tight front-end, that keeps out everything beyond the Ham Band edges. (Even if it were possible to modify it for out-of-band operation, the receiver would be useless outside the Ham Band.)

There are two basic problems with the radio's design that I'm aware of. First, energy from the rubber-duckie antenna gets into the radio's power leads. When you run the radio from a separate 12 Volt DC power source, the higher power level is sufficient to make the radio malfunction due to self-interference. Use of an outside antenna will usually eliminate the problem, however.

Second, DTMF tones are fed directly to the modulator, along with the CTCS tone. It is not Pre-Emphasized before being transmitted. At some repeater decoders, the resulting De-Emphasized audio does not have the correct ratio of high tones to low tones, for proper autopatch operation. Radio Shack has a service bulletin, that says little more than "adjust the tone level until it decodes"! In simpler terms, the HTX-202 may be unreliable for use with an autopatch.

If you can afford a more expensive radio, there are several on the market that you might prefer. Many newer radios from the major manufacturers, provide many more channels than the HTX-202, and some even operate on both Two Meters and 440 MHz.

As far as coverage distance is concerned, most such hand-held transceivers are about the same. Range is primarily limited by the line-of-sight distance between a transceiver's antenna and the "radio horizon". If you are within range of a repeater, then the repeater's antenna height will determine how far you can talk, regardless of which radio you use.

5283. Yaesu FT530 Squelch Problem - Help!!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-30 00:00:00 UTC
From: ct@onr.com
Message-ID: <52pitn$mip@mari.onr.com>
Source record: 193414

I turned on my FT530 talkie this weekend only to find
that the squelch is stuck OPEN on the 2M band. The squech
pot does not appear to be intermittent.

My questions are:

1. Has anyone else had problems with their squelch stuck open on 2m?

2. Could this be a processor initialization problem? Would a master
reset fix the problem?

3. Does anybody have service bulletins for the Yaesu FT-530?

4. Is there a COARSE squelch trimpot inside the talkie?

thanks in advance,

Charlie WB4HVD

Is there any problem, using the japanese version of
the Icom 706, when one lives in europe? Does the IC-706
come with different functions?
Hoping for an answer, coz I am thinking of bying one
this friday... :)
73 de Jan/ SM 0 SBX
mailto:jhe@algonet.se

B.T.W! Pop into this www-link http://www.algonet.se/~jhe/jota.html
as of the 19-20 October. Hopefully you will see the active
transmitting frequency from an IC-735 operating in the Jamboree On
The Air 1996. The Habo scoutgrop will operate from abt 50Km N of
Stockholm.

Why don't you just call Ameritron?

5286. Alpha 89 vs. 91B

Newsgroup: rec.radio.amateur.equipment
Date: 1996-09-30 00:00:00 UTC
From: Kory Hamzeh <kory@avatar.com>
Message-ID: <Pine.BSI.3.91.960930163907.12906B-100000@avatar.avatar.com>
Source record: 193417

Hi everyone,

I have an Alpha 91B on order which should be here in a couple of months.
I know a person who is selling a 18 months old 89 in MINT condition for
the same price as a new 91B. He only has about 50 hours on the tubes and
keeps it covered all of the time. Still has 2 1/2 year warantee left. The
only drawback is that he is on the east coast, and I am on the west coast.

Which one should I buy?

Thanks,
Kory

But it wouldn't.

If our manuals sold like Danielle Steele's novels we could make it in
volume, but for some reason we aren't selling them in the local B.
Dalton bookstore yet. :-) :-) :-) :-)

My mail server was down so it you replied previously, try again!

I have 6 Plectron tone activated switches for sale. They were used to activate fire sirens but could be adapted to whatever. They operate on 46.46 MHz and use 12 vdc or 120 vac. Any questions e-mail tcrist@suffolk.lib.ny.us.

Tom
